User Filed as: Excl/AdminMgmt-14-4/QA:N/A

I [ I continue to oppose the nuclear waste repository proposed for Yucca Mountain.

I worry that the project will damage our State's aquifer as well as rendering areas of Nevada uninhabitable for centuries.

I believe our Government must do more to reduce the number of active nuclear projects, both energy based and defense based

There remains no good solution for the waste despite many decades of research.

It seems unwise to concentrate the waste problem in this location, or any one location, in addition to the many sites throughout the Country that are already spoiled.

A better path seems to be to throttle down the Nuclear plants to eventually stop the cycle of waste production.

The existing waste should continue to be stored at the various generation sites until scientists can find ways of adequately neutralizing the material, if ever.

The money earmarked for Yucca Mountain should immediately be reallocated towards PV panel production and other non-lethal alternative fuels. ]
