 User Filed as: Excl/AdminMgmt-14-4/QA:N/A

Dear Sirs;

I really hope that the fate of Yucca Mountain is dependent on a 'real' look at the Geological dangers that this nuclear dump site poses. With 13 fault lines running through it, it would seem to be a very poor choice as a storage area for such a poisonous substance. It is a dead-on surety that this substance's future is to pollute and condemn the land, water (whatever there is), human & animal life for many miles around IF it should be put in there.

1

This plan to despoil the sacred land of the Shoshone Native Americans is also a very odorous idea. American Indians don't live ON their sacred sites - they visit it and practice their religion there. That is how it is done.

So just because a lack of people present near or on the site (living there) --- Does NOT make the mountain, a realistic place to dump. It is NOT scab (unwanted, trash) land.

Thank you for your attention,
