Subject: Yucca Mountain Nuclear Waste Repository

LSN: Relevant - Not Privileged
User Filed as: Excl/AdminMgmt-14-4/QA:NA

I oppose using Yucca Mountain for a nuclear waste repository for the following reasons:

- 1 [In 2004, project was cited by UN as a racist human rights violation of Western Shoshone treaty lands.
 - Water rights belong to Nevada, who oppose the Yucca Dump.
 - There are 33 geologic faults in the area,
2 through the repository.
 - It is a Class 4 earthquake zone.

- Nearby cinder cones show potential for volcanic activity.
- Hot groundwater infiltration is possible from below.
- Rainwater infiltration will come through fractures from above.
- Increased seismic stretching here causes movement of Earth's crust.
- The groundwater will eventually become undrinkable.
- Nearby tourism communities will suffer economic impacts

immediately from
intense waste transportation,
and health impacts in the long
term.

Should Yucca Mt. be the place
for nuclear waste? NO!]
