Dear People;

1 [Yucca Mountain is not a safe site at which to store nuclear waste. The half-life of nuclear waste is a million years. Can we really believe that there will be no disruptions at the fault line that runs through Yucca Mountain over the next million years?]

2 [There is not a safe way to transport all the waste from around the country to Yucca Mountain. From 1979 to 1990 there were more than 1,079 trucking accidents involving the transporting of so-called low-level waste. No matter how well one trains the truck drivers, the roads cannot be cleared of less skilled drivers and those who would intentionally do harm.]

1 cont [Yucca Mountain is not a viable solution. Future generations will condemn our selfish use of nuclear power and proliferation, and they will be right to do so. I call upon the U.S. Department of Energy to stop this unwise plan for Yucca Mountain and turn instead to safe containment at the sites we have already had the misfortune to have put nuclear facilities.

We need no more nuclear sites of any kind; we need intelligence and moral suasion to find other energy solutions.]

Thank you,
Noreen P. Cullen
