I } Government Decision Makers, I am writing in behalf of the Southern California Ecumenical Council, a council of churches which has been critical of nuclear power and your plans for storage of waste material at Yucca Mountain for about thirty years. You have heard our story. Nuclear waste is toxic to the bio-sphere and provide the final, fatal blow to the human enterprise. Yucca Mountain is geologically unstable. Not only that but your engineers and scientists have yet to develop the technology for safe storage of waste for the hundreds of thousands of years required. New nuclear power plants are not the solution to global warming and will only compound the threats to the human species. I beg you to stop now and solve the problems we already have. Do not proceed with Yucca Mountain. } Sincerely, Rev. Albert G. Cohen, Executive Director, Southern California Ecumenical Council scec1@scec1.net
