1] What a sad thing to think that you can move all the nuke waste from over 100 nuclear reactors to Nevada, to a site held sacred by the Shoshone, to a site that is known to be seismically active. And to think you would allow shipments to sit in urban rail yards for up to two years. Just the other day it has become clear that guards posted at nukes across the US to guard against terrorism regularly fall asleep. Are you really charged with protecting the public or making disposal easy for the nuclear industry.] Elena Da, Charlottesville, VA
