Subject: Yucca Mountain as a Nuclear Waste Repository--Bad Idea

January 8th, 2008

[This site, Yucca Mountain, is a very poor location for nuclear waste storage.

(1) The mountain is NOT geologically stable, sitting on a fault line; the area experienced an almost 5 point Richter scale earthquake just a few years ago.

(2) Terrorist threats exist all along the lengthy transportation routes, both by rail and by road.

(3) The technology being used to contain and ship the waste have failed in tests and have been falsely billed to perform beyond actual design specs.

The best, safest policy is NOT TO BUILD any more reactors. Keep waste stored fairly close to its origination location, until alternative technology supersedes the need for these energy sources.]

Sincerely,

Amber Ladeira
