Subject: Yucca Mountain

[Yucca Mountain project must be kept alive and funded.

Our nation's waste has to go somewhere and this is the perfect place. Transport of any waste is dangerous, but with proper precautions we can store our waste at Yucca till technology finds a way to completely dispose of it, or it can be reused.

For the opponents of Yucca Mountain all I can say is go there! Look for yourself and learn. Don't depend on the news media, or emotional politicians who find it "proper" to now speak against it.

Everyday on our roads transport of hazardous materials are transported in the midst of rush hour traffic and school buses. The only difference in any transport to Yucca will be media coverage.

For the record, I am not friends or family of any worker or anyone connected with this project. I am a Las Vegas resident for ten years who has visited the site and researched this subject.

Please, for our nation's future generations....let Yucca Mountain do what it was built to do...house nuclear waste.]
