EIS office  
U.S. Dept. of Energy

Jan, 8, 2008

I am most definitely apposed to the EIS for the Yucca Mountain Nuclear Waste Facility. It has been shown that the Lower Carbonate Aquifer, which underlies the planned repository at Yucca Mountain has several discharge points on the western side of the Funeral Mountains in the Furnace Creek area of Death Valley National Park. You must pay serious attention to the catastrophic damage you will be doing to this great National Park by putting nuclear material that is certain to leak into this aquifer into the ground.

Please do not poison the water and soil with nuclear material. You must respect our National Parks and the people that live in the area.]

Sincerely

Joseph Liesner
