I { I feel that no nuclear waste should be dumped at Yucca Mountain. Actually no nuclear power should be used any where in the world.

Nuclear power serves a fiscal benefit only to those who create, those who have to try to find a place to dump and those who are responsible for the actual placement of this toxic material. These people, I am sure have great health insurance and are very careful about where they live (no land fills for these people!)

There are other alternatives that are available that will not pollute or sicken the world and its inhabitants.

The options are currently available, but big corporate business wants quick cash, cares not about their legacy...but do they care about their children and their children's children? And so, the available funds are not put into environmentally safe, inhabitant friendly industry. Instant gratification is just that...and, folks,

Environmentally friendly alternatives may be costly to start up (that is always the excuse used when big business and their friends in government are crying in their martinis) HOWEVER, after the initial cash lay out (which can be funded by Uncle Sam, you know...it is for other industries) there will be jobs for those who are interested in a toxic free environment...and there will not be toxic by products looking for a home. Health care for all and no devastating side effects from working with clean air, water and soil!!! Over all working green is economical and Long term effects...priceless! }
