I oppose Yucca Mountain becoming the nation's repository for high level nuclear waste based on the site's geological instability and likelihood for leakage, as well as out of respect for the Western Shoeshone people to whom this land is sacred. I believe that the only reasonable option for managing the waste at this point, until a safe, permanant geologic repository can be created, is hardened, on-site storage ("HOSS"), at the reactor sites.

Thank you,
