Subject: I opposed Yucca Mountain plan--public comments

LSN: Relevant - Not Privileged
User Filed as: Excl/AdminMgmt-14-4/QA:N/A

I oppose the plan to ship radioactive waste to Yucca mountain and attempt to store this highly dangerous waste in Yucca mountain! Based on my graduate studies on the impact of nuclear mining, processing and storage of nuclear waste on native american lands, I believe this is a terrible, dangerous plan!.

I am most concerned about: 1) the environmental and health dangers of shipping this chemically unstable, toxic waste across the county (such as from Hanford) using public roadways and waterways. 2) the major and disproportionate environmental, cultural and health dangers to native americans living near Yucca mountain 3) the failure of the EIS to adequately address the shipping dangers and the dangers to the health of native americans 4) the fact that the Yucca plan would violate treaties with native people in the areas, which is a violation of international law and human rights 5) the existence of major geologic faults in the area, creating a greater risk of accident caused by an earthquake and 6) the fact that this Yucca plan would not address the real issue of the need to stop producing nuclear waste that we cannot safely transport and store and that will exist for thousands of years releasing horribly dangerous levels of radioactivity.

I implore you to reconsider and STOP this plan to deposit the most toxic of all substances on to sacred, beautiful lands to which native american people retain treaty rights.

Please, for the good of humanity, animals and all living beings--Stop this plan now!]

With prayers for the end of this plan,
Jezreela Anderson, MS
