Comment Text :

1 --> 1. [Extend the comment period. This is insanely short notice.]

2 2. [High level radioactive waste on the nation's highways and by ways are not a comforting thought. accidents are caused by the simplest and stupidest things. There is no way I would want to drive on the same highway with a transport of high level waste. or live near the highway, which millions of people do. You would be exposing unknown numbers of people. Have you no conscience??

I already live in the EPZ of a reactor. and now you are going to make the roads more hazardous then they are already? We can't get out in the event of an accident and the plant, we for sure aren't going to get away if a truck collides or tips or swerves. We are on the transportation path of at least 3 reactors. All nearly full capacity.

3. Sure pick Native American land. They are the lowest on the totem pole. Put it in New York and see how far you get.

Shut the damn reactors down.

Stop making more of this waste that we don't have a solution for.

Stop spending taxpayer money on this charade]

Thank you.
