Hi,

I [ I would like to express my concern over the use of Yucca mt for a waste repository and insist that this does not happen.

This has got to stop:

- 1) Disrespect to the Native Sacred sites and planet Earth.
- 2) Unsafe transportation.
- 3) Using nuclear energy. Highly dangerous. Highly dangerous to future generations especially. Highly dangerous environmentally for air, water, and all life forms. No realistic way to safely deal with deadly toxicity. I strongly disagree with using nuclear energy at all. Waste sites are not cleaned up from mining and will never be safe. Look at the track record. Who benefits? Is it really worth the sacrifice?

There are other ways to generate energy sustainably. Many other solutions that the powers that be refuse for some reason.

Thank you for hearing me. I speak for the earth and the people and all of life. ]
