--> Dear Sirs,

1{ It is evident that those who have control of the waste products are not taking into consideration if we have an earthquake or some natural disaster that it may get into the water supply. There is some type of mineral the government discovered that gets rid of radiation. I think it was supposed to absorb the effects of radiation. It has aa specific number attached which I don't have at the moment. THis should be tested before any waste material is put in Nevada. We have rights as much as any of the other states. Why should we deal with sickness and disease? You should look at movies such as "Land of the Dead" by George Romero to see how people would react if some crisis went down. I'm not saying that scifi is reality but look at the way people handle problems in these movies and ask yourself do you want the same things to happen to me and my family? Do you want our grandchildren to have to deal with poisonous atmospheres, global warming and the like? Or is terminal greed on the part of the people pushing this crap acceptable?

It's not too late to think and reason out what's best for the future of Nevadans. }
