

12 *Please do not let the Yucca Mountain project continue. Now that there are approximately 2 million people living only 90 miles south of the site (and that number is growing every month) it does NOT make sense to have such a project. Nobody knows what can happen when there is that much spent nuclear fuel near them. We will only know years down the road the detrimental effects it could have on our children. In addition to the storage site, the transportation to get the spent nuclear fuel to the site is very dangerous. We have not yet eliminated train wrecks in this country nor have we eliminated terrorist attacks. Putting such a project near so many people is irresponsible; the scientists may think it is safe but they do not know for sure. Why take such a big risk? It is not fair to the people of Nevada and the routes the transportation takes will put other states at risk as well. For the future of **our** children, please do not let the project continue. Thank you. }
