1 MS. SMITH: I think that the DOE should have
2 more than one corridor into Yucca Mountain because if
3 you bring shipments up from the south and you only
4 use the Mina Corridor, you're taking them way out of
5 their way. They're coming in from Arizona. They're
6 going an extra distance they don't have to go.

7 Plus, if something should happen and one
8 corridor needs to be shut down, you still have one
9 open corridor you can divert to. With all the money
10 that's been spent in the environmental impact
11 studies, why not open both corridors.

12 And also I don't think that we should
13 eliminate the possibility of trucking. If you're
14 going to only have the Mina Corridor, then perhaps
15 trucking in from San Diego or trucking in from
16 Arizona would be feasible. That's it.
