

The Role of Environmental Hazards in Premature Birth

Edited by Donald R. Mattison, Samuel Wilson, Christine Coussens, and Dalia Gilbert
 Washington, DC: National Academies Press, 2003. 127 pp. ISBN: 0-309-09065-2, \$35 paper

Preterm birth occurs frequently in most countries from which we have reliable statistics. Prematurity—a birth that occurs before 37 weeks of gestation—is a serious condition that carries a substantial excess risk of death, diseases, and

social burdens for the infant, especially for those born before 32 weeks of gestation. “Prematurity” is a clinical term indicating that the newborn is not yet suited for extra-uterine life.

As stated in *The Role of Environmental Health Hazards in Premature Birth*, researchers believe that preterm birth is increasing in some countries, but the extent to which it is increasing is not known. It is of the utmost importance to find out whether preterm birth in fact is increasing, and the workshop participants presented in the book could have elaborated on this aspect in greater detail. The way we estimate gestational age is, of course, significant in determining an increase in preterm birth, and the widespread use of ultrasound to estimate gestational age has enhanced predictions for clinical practice but perhaps not for monitoring. Using ultrasound as a monitoring instrument requires use of comparable procedures and appropriate standards. The changes in fertility patterns in many countries as well as the increasing use of infertility treatment may play a role.

This book combines epidemiology with biology and clinical research findings. The importance of prematurity clearly justifies investments in research, and the March of Dimes, the National

Institute of Environmental Health Sciences, the Centers for Disease Control and Prevention, the U.S. Environmental Protection Agency, and the Institute of Medicine, among other organizations, have taken up this important challenge. At present several attempts to prevent preterm birth have failed, and the promising results based on early intake of progesterones or n-3 fatty acids will at best only prevent some cases of preterm birth. Without effective preventive measures not much will be gained by being able to identify a pregnant woman at high risk.

The book presents six summaries from five workshops, as well as abstracts. Workshop participants included pediatricians, perinatologists, economists, epidemiologists, toxicologists, as well as other scientists. The chapters cover determinants of preterm birth, the biology of preterm birth and delivery, gene–environment interactions, and finally social implications and future directions for research. The weakest chapter is on gene–environment interactions, which is not surprising because we still know little about the role of genetics in prematurity. Family studies indicate that genetic factors do play a role.

More could be gained by investing better methods for monitoring preterm birth. Having monitoring programs following the same protocol in different countries could provide important clues to aspects that are the most important determinants of preterm birth. Given the large variation we expect to see on this condition among populations, much more could be learned from focusing on the big picture rather than looking at the biologic details. The book unfortunately does not go into detail about the conditions for setting up such a monitoring program, which should be implemented in addition to the monitoring of low birth weight.

Despite this shortcoming, the book is highly recommended for all with an interest in preterm birth and prematurity.

JØRN OLSEN

Jørn Olsen is professor and head of the Danish Epidemiology Science Centre and head of the National Birth Cohort in Denmark. His main research interest is reproductive epidemiology.

Announcements | New Books

A Small Dose of Toxicology

Steven G. Gilbert
 London: Taylor & Francis, Inc., 2004. 224 pp.
 ISBN: 0-415-31168-3, \$95

Air Monitoring for Toxic Exposures: An Integrated Approach, 2nd Edition

Henry J. McDermott
 Hoboken, NJ: John Wiley & Sons, 2004. 704 pp.
 ISBN: 0-471-45435-4, \$125

Biostatistics: A Methodology for the Health Sciences, 2nd Edition

Gerald van Belle, Lloyd D. Fisher, Patrick J. Heagerty, Thomas S. Lumley
 Hoboken, NJ: John Wiley & Sons, 2004. 872 pp.
 ISBN: 0-471-03185-2, \$110

Bioterrorism Preparedness, Attack and Response

John Blair, Myron Fottler, Albert C. Zapanta, eds.
 Burlington, MA: Elsevier, 2004. 392 pp.
 ISBN: 0-7623-1105-3, \$95

Cell Cycle and Growth Control: Biomolecular Regulation and Cancer, 2nd Edition

Gary S. Stein, Arthur B. Pardee, eds.
 Hoboken, NJ: John Wiley & Sons, 2004. 800 pp.
 ISBN: 0-471-25071-6, \$135

Chemical Concepts in Pollutant Behavior, 2nd Edition

Ian J. Tinsley
 Hoboken, NJ: John Wiley & Sons, 2004. 416 pp.
 ISBN: 0-471-09525-7, \$89.95

China's Water Crisis

Ma Jun
 Norwalk, CT: EastBridge, 2004. 242 pp.
 ISBN: 1-891936-28-X, \$44.95

Environmental Hazards: Assessing Risk and Reducing Disaster, 4th Edition

Keith Smith
 New York: Routledge, 2004. 324 pp.
 ISBN: 0-415-31803-3, \$128

Environmental Monitoring and Characterization

Janick Artioli, Ian Pepper, Mark Brusseau
 Burlington, MA: Elsevier, 2004. 424 pp.
 ISBN: 0-12-064477-0, \$74.95

Environmental Policy

Jane Roberts
 New York: Routledge, 2004. 256 pp.
 ISBN: 0-415-19885-2, \$95

Exploring Environmental Issues: An Integrated Approach

David D. Kemp
 New York: Routledge, 2004. 464 pp.
 ISBN: 0-415-26864-8, \$38.95

GIS in Public Health Practice

Ravi Maheswaran, Massimo Craglia
 Boca Raton, FL: CRC Press, 2004. 320 pp.
 ISBN: 0-415-30655-8, \$99.95

Living Dangerously: Are Everyday Toxins Making You Sick?

Pat Thomas
 Dublin, Ireland: Gill & MacMillan, Ltd., 2004. 296 pp.
 ISBN: 0-7171-3600-0, \$19.95

Mouse Models of Cancer

Eric C. Holland, ed.
 Hoboken, NJ: John Wiley & Sons, 2004. 494 pp.
 ISBN: 0-471-44460-X, \$195

Natural Disasters and Sustainable Development

Riccardo Casale, Claudio Margottini, eds.
 New York: Springer-Verlag, 2004. 397 pp.
 ISBN: 3-540-42199-8, \$169

New Perspectives on Environmental Justice: Gender, Sexuality, and Activism

Rachel Stein
 Piscataway, NJ: Rutgers University Press, 2004. 320 pp.
 ISBN: 0-8135-3427-5, \$24.95

Smoke and Mirrors: The Politics and Culture of Air Pollution

E. Melanie DuPuis
 New York: New York University Press, 2004. 416 pp.
 ISBN: 0-8147-1960-0, \$65

Sustainable Development in Practice: Case Studies for Engineers and Scientists

Adisa Azapagic, Slobodan Perdan, Roland Cliff, eds.
 New York: Springer-Verlag, 2004. 458 pp.
 ISBN: 0-470-85608-4, \$130.00

Technological Choices for Sustainability

Subhas K. Sikdar, Peter Glavic, Ravi Jain, eds.
 New York: Springer-Verlag, 2004. 441 pp.
 ISBN: 3-540-21131-4, \$139.00

Toxicology Pearls

Kevin C. Osterhoudt, Jeanmarie Perrone, Francis DeRoos, Fred M. Henretig, eds.
 Burlington, MA: Elsevier, 2004. 272 pp.
 ISBN: 1-56053-614-4, \$39.95

Understanding Environmental Pollution: A Primer, 2nd Edition

Marquita K. Hill
 Cambridge, UK: Cambridge University Press, 2004. 488 pp.
 ISBN: 0-521-82024-3, \$110

Urban Sprawl and Public Health: Designing, Planning, and Building for Healthy Communities

Howard Frumkin, Lawrence D. Frank, Richard Jackson
 Washington, DC: Island Press, 2004. 288 pp.
