

ARE YOU USING ASPIRIN DAILY?

YOU SHOULD TALK TO YOUR DOCTOR FIRST.

Using aspirin for a few days at a time to fight pain, swelling or fever is fine for most people. But if you're using it everyday for weeks, months or years to prevent a heart attack, stroke, or for any use not listed on the label — and without guidance from your doctor — you could be doing your body more harm than good.

Daily aspirin use has shown to help people that have already experienced a heart attack and some kinds of

strokes by lowering the chance of another. Aspirin can also help people with prior medical conditions and risks.

To find out if you are at risk, talk to your doctor. Only your doctor can tell you if you should use long-term aspirin treatment, and then prescribe the right dose for you.
