

Vision

The South Dakota Cadastral Committee will serve the public through a coordinated statewide cadastral data system.

Within three years the committee will accomplish its key strategic goals:

Create a Statewide Framework

The committee will create a statewide network of collaborators, including local, state, tribal and federal government and private stakeholders. They will find and cultivate champions of cadastral data, who can raise awareness and public support. The committee will identify all participants in cadastral data collection and management and develop a conceptual operations plan for them.

Conduct a Statewide Needs Assessment

The committee will identify existing data and data gaps in partnership with local, state, tribal and federal stakeholders. With a clear understanding of the existing data availability, the committee will recommend a multi-purpose, needs driven cadastral data system that supports public health and safety and efficiency of government.

Develop Funding Sources

Since there will be no mandate to produce data, the committee will solicit funding to support projects, which will assist in the goals of a coordinated statewide cadastral data system.
