In order to consolidate related isotope production activities, \$1,400,000 for the Test Reactor Area Hot Cells has been transferred from nuclear energy research and development to the isotope

support program and included within available funds.

The Committee is concerned about the level of administrative oversight supporting the Isotopes Support program. Accordingly, the Committee recommendation includes \$1,000,000 for program direction, a reduction of \$700,000 from the budget request of \$1,700,000.

Termination Costs.—The National Academy of Sciences' Committee on "Electrometallurgical Techniques for DOE Spent Fuel Treatment" concluded that electrometallurgical techniques being developed at the Argonne National Laboratory could represent a sufficiently promising technology for treating a variety of DOE spent fuels and warrant continued research and development. In order to preserve the unique capabilities of the assets at Argonne-West, activities related to bringing EBR–II to a safe and stable configuration may proceed, but such activities must leave the Argonne-West facilities, including EBR–II, capable of later utilization.

General Reduction.—Due to severe budget constraints, the Committee has included a general reduction of \$8,000,000 to be applied

equally among all program activities.

CIVILIAN WASTE RESEARCH AND DEVELOPMENT

Due to severe budget constraints, the Committee has not provided the requested funding of \$699,000 for this program in fiscal year 1996.

ENVIRONMENT, SAFETY AND HEALTH

The Committee recommendation of \$128,433,000 is \$38,326,000 less than the budget request of \$166,759,000. Much criticism has been heard regarding excessive compliance reviews and audits of field facilities and laboratories. With the reduction in funding resources, the Committee expects the Department to make every effort to coordinate reviews and eliminate excessive oversight by headquarters and field organizations, and to reduce the use of support service contract employees to perform federal functions.

ENERGY RESEARCH PROGRAMS

BIOLOGICAL AND ENVIRONMENTAL RESEARCH

The Committee recommendation of \$379,645,000 is \$52,019,000 less than the budget request of \$431,664,000.

The Committee recognizes that there exists a critical need to develop the appropriate and effective technology to support the Department's environmental remediation activities. The Department is encouraged to use the expertise and scientific achievements of the Energy Research programs and the national laboratories to address the environmental cleanup technology issues.

Within available funding, the Committee supports the National

Institute for Global Environmental Change.

The Committee encourages the Department to support research in the development and shared use of high MR instruments for the study of brain function in centers where these research efforts can lead to improved diagnosis and treatment of the mentally ill.

The Committee is pleased to note the progress that has been made with the Centers of Excellence for Laser Medical Applications. It is apparent that the competitive edge has been maintained, the U.S. citizens are benefiting from this cost-effective technology. Therefore, the Committee recommends that funding for the work of these Centers remain at the current level of \$1,500,000.

Due to budget constraints, the Committee recommendation includes \$40,000,000 for the Environmental Molecular Sciences Laboratory which is the same as fiscal year 1995, and \$10,000,000 less than the budget request.

FUSION PROGRAM

The Committee recommendation for the fusion program is \$229,144,000, a decrease of \$136,901,000 from the budget request of \$366,045,000.

Given the mandate to reduce the budget deficit, the Committee is not able to provide funding to support the direction of the fusion energy program as requested by the Department. It will be necessary for the Department to develop a revised program strategy for fusion energy at a much reduced funding level. Budget realities dictate that future funding will not be available to pursue the course envisioned by the Department's budget request which included funding both the International Thermal Experimental Reactor and the Tokamak Physics Experiment project.

The fusion program is currently being reviewed by the President's Council on Science and Technology, but results of this review are not yet available. With the funding provided in fiscal year 1996, the Committee expects the Department to propose a fusion program which supports advancement of key research areas and exploration of alternatives at a much smaller scale in laboratories and universities. This plan should be developed in consultation with the fusion community and Congress, but with the understanding that future funding levels are unlikely to increase and could well decrease below the fiscal year 1996 recommendation. The Department should also to the extent possible make effective use of the investment in existing facilities.

BASIC ENERGY SCIENCES

The Committee recommendation for Basic Energy Sciences is \$792,661,000, a decrease of \$18,758,000 from the budget request of \$811,419,000.

The Committee acknowledges the important and essential contributions of the Department in the Nation's basic science and research programs. The collaboration between the national labs and the university community has provided the foundation for scientific breakthroughs and achievements in energy-related research. To continue this progress, the Committee recommendation strongly supports the budget request to enhance the utilization of the Department's fundamental science and user facilities.

The Committee recommendation includes \$7,000,000 to continue the Department's Experimental Program to Stimulate Competitive Research (EPSCoR) program at the fiscal year 1995 level.

Within available funds, \$1,000,000 is provided to fund peer-reviewed research on the potential energy applications of sonoluminescence. Sonoluminescence is an effect in which highly concentrated sound waves in liquids generate very short bursts of light from bubbles in the liquid. Calculations have suggested the possibility of its use in inertial fusion applications.

The Midwest Superconductivity Consortium is continued at the

fiscal year 1995 funding level of \$3,200,000.

The Committee has included the budget request of \$8,000,000 for research and design and conceptual design activities for a spallation neutron source. The preferred alternative site for the spallation source is the Oak Ridge National Laboratory in Tennessee to maximize the use of the expertise already developed through preparation of the advanced neutron source design and to take advantage of the laboratory's experience in operating particle accelerators and conducting neutron scattering research.

OTHER ENERGY RESEARCH PROGRAMS

Other energy research programs such as energy research analyses, laboratory technology transfer, advisory and oversight, multiprogram energy laboratory support, and policy and management are funded in this section. The Committee recommendation for Other Energy Research programs is \$45,256,000, a decrease of \$79,979,000 from the budget request of \$125,235,000.

No funding has been provided for the Laboratory Technology Transfer program. Technology transfer activities in energy research should be funded only to the extent that they directly support ongoing energy research programs and can compete for direct program

funding.

The Committee recommendation for the Advisory and Oversight program is reduced as a result of redundant environmental, safety and health departmental oversight and the termination of the lab-

oratory technology transfer activities.

The Committee supports the budget request for the construction projects in the Multiprogram Energy Laboratories program. The capital equipment and general plant projects accounts are merged with the Energy Research program that is supported by the specific capital items.

ENERGY SUPPORT ACTIVITIES

The Committee recommendation for Energy Support Activities is \$12,000,000, a decrease of \$92,810,000 from the budget request of \$104,810,000.

Due to severe budget constraints, the Committee recommendations does not include funding for the University and Science Education programs. It is recognized that certain educational activities, such as graduate fellowships and intern programs, are a direct byproduct of the line programs and are, therefore, included in the budget request of those programs. Those educational activities that are an integral part of program activities should be continued within existing program funds.

The Committee recommendation for the Technical Information Management program is \$12,000,000, a reduction of \$5,450,000

from the budget request of \$17,450,000 due to severe budget constraints.

Due to the significant reduction in funding for technology transfer activities throughout the Department, the Committee recommendation does not include funds for a separate Technology

Partnership organization.

The In-house Energy Management program has been in existence over twenty years. The Committee recognizes the success of the Department's efforts to incorporate energy efficiency provisions into the operations of its facilities. After twenty years, it appears that energy efficiency is an integral part of the operating philosophy of the Department's facilities; therefore, the Committee does not see the need for a separate funding source for these alternatives.

ENVIRONMENTAL RESTORATION AND WASTE MANAGEMENT

(NON-DEFENSE)

The Committee recommendation of \$626,541,000 is a decrease of \$86,449,000 from the budget request of \$712,990,000.

The Committee recommendation includes \$15,998,000 to continue the Maywood, New Jersey project, and \$6,080,000 for the Wayne, New Jersey project, as contained in the budget request for the Formerly Utilized Sites Remedial Action Program.

From within available funds, the Committee recommendation is to continue the support of the University Research Program in robotics at \$3,500,000.

Due to the relationship between corrective activities and waste management, the operating expenses for corrective activities have been combined with waste management. In addition, beginning in fiscal year 1997 all new corrective activities construction projects should be included in the waste management program.

FUNDING ADJUSTMENTS

The Department proposed to use \$79,300,000 of prior year balances to offset current year funding requirements and \$50,000,000 to be achieved by implementing savings recommended by the Galvin Task Force. The Committee recommendation includes the use of prior year balances, but not the undistributed general reduction. Specific program reductions have been taken which will reflect savings from implementing recommendations of the Galvin Task Force.

RECOMMENDATION SUMMARY

Details of the Committee's recommendations are included in the table at the end of this title.

URANIUM SUPPLY AND ENRICHMENT ACTIVITIES

Gross Appropriation:	
Appropriation, 1995	\$63,310,000
Budget Estimate, 1996	42,292,000
Recommended, 1996	29,294,000
Comparison:	
Appropriation, 1995	-34,016,000
Budget Estimate, 1996	-12,998,000

Due to severe budget constraints, the Committee recommends a reduction of \$10,000,000 from the budget request of \$288,807,000. However, the recommendation includes full funding of \$42,000,000 to implement the reimbursement for disposal of mill tailings in accordance with title X, subtitle A, of the Energy Policy Act of 1992.

The Administration proposed legislation to collect fees from foreign utilities similar to the decontamination and decommissioning fund assessment that is being collected from domestic utilities. This proposed language has not been included by the Committee.

GENERAL SCIENCE AND RESEARCH ACTIVITIES

Appropriation, 1995	\$984,031,000 1,017,530,000 991,000,000
Comparison: Appropriation, 1995	+6,969,000
Budget Estimate, 1996	-26.530.000

The General Science and Research Activities programs are concerned with understanding the nature of matter and energy and the fundamental forces and particles of nature. The knowledge acquired in this basic research is an essential part of the intellectual foundation of other scientific disciplines and technical permits. Deeper understanding correspondingly contributes to all of the scientific disciplines and to our Nation's technological base. The General Science and Research Activities programs are organized into two interrelated scientific programs, high energy physics and nuclear physics. While these programs are not directly associated with energy technology in the near- or mid-term, they support basic research whose aim is to provide new knowledge which is expected to have long-term scientific and technological impacts on energy development and utilization and on other aspects of our society.

The Committee's funding recommendation for General Science and Research Activities reflects the continued role of the federal government in fundamental scientific research where research is not market-driven and is difficult for the private sector to conduct. The Committee strongly supports the budget request for the Scientific Facilities Utilization Initiative to enhance and increase the use of fundamental science and user facilities, but due to severe funding constraints, has found it necessary to reduce the overall budget request. It is the Committee's hope that Congressional actions such as merging operating and capital funding along with a lessening of departmental internal regulations and oversight reviews will compensate in part for this reduction.

As described in the introductory section of this report, operating and capital funding requests have been merged to permit more effective operation of the research facilities and laboratories. The Committee recommendation reflects redistribution of the capital equipment, general plant projects, and accelerator improvements projects funding to the appropriate program accounts.

Due to budget constraints, the Committee recommendation for high energy physics is \$677,000,000, a reduction of \$8,552,000 from the budget request of \$685,552,000. The recommendation for nuclear energy physics is \$304,500,000, a reduction of \$16,578,000

from the budget request of \$321,078,000. Funding for program direction has been reduced to \$9,500,000 from the request of \$10,900,000.

Departmental changes in internal regulations and a reduction in the level of oversight and compliance audits should permit laboratories and facilities to reduce the number of personnel and resources needed to respond to requests from external oversight organizations. The Committee expects a good faith effort on the part of facility managers in doing their share to reduce administrative overhead and unnecessary costs as funding for the program activities will continue to be constrained.

SUMMARY RECOMMENDATIONS

Details of the Committee's recommendations are included in the table at the end of this title.

NUCLEAR WASTE DISPOSAL FUND

Appropriation, 1995	\$392,800,000
Budget Estimate, 1996	
Recommended, 1996	226,600,000
Comparison:	
Appropriation, 1995	-166,200,000
Budget Estimate, 1996	+226,600,000

The Nuclear Waste Policy Act of 1992 and the Nuclear Waste Policy Act Amendments of 1987 authorize a waste management system for the disposal of spent nuclear fuel and high-level radioactive waste from commercial and atomic energy defense activities. These laws establish the Nuclear Waste Disposal Fund to finance disposal activities through the collection of fees from the owners and generators of nuclear waste. The Committee recommends \$226,600,000 to be derived from the Fund in fiscal year 1996. Combined with the appropriation to the Defense Nuclear Waste Disposal account, a total of \$425,000,000 will be available for program activities in fiscal year 1996.

The Committee notes with disappointment and frustration that the President's request is wholly inadequate to support the waste disposal program developed by the Office of Civilian Radioactive Waste Management. The Committee further notes that the Administration's assumption that Congress would immediately enact legislation providing for a mandatory Nuclear Waste Fund appropriation, financed by receipts from the sale of the federal government's uranium enrichment enterprise, was fundamentally unrealistic.

The Committee is convinced that if the Administration were serious about solving our Nation's spent fuel problem, and if it were committed to the civilian waste disposal program of the Department of Energy, then it would have requested sufficient discretionary budgetary authority to pursue that program. This should not have been difficult, given the budget's inattention to the imperative of deficit reduction.

The Department, however, has apparently determined that the problem of nuclear waste disposal is of insufficient consequence to successfully compete for funding with other discretionary programs within the Department's jurisdiction. The Committee, on the other hand, recognizes the urgency of the problem and has discharged its
