Comment Text :

-->My comment addresses the transportation of nuclear waste in any manner. The recent accident and deaths involving an 18-wheeler in Las Vegas on I-15 should speak for itself! Whether transported by rail or truck, the route would pass through many towns and densely populated areas throughout the country. Is the possibility of an unknown number of deaths or contamination worth the risk? I think not. Instead of spending untold amounts of taxpayer dollars on this faulty project, spend the money on research to recycle the nuclear waste into a form which could be re-used in nuclear power plants, etc. If storage of nuclear waste is supposedly so safe, why not just leave it where it is?
