Transportation of the nations nuclear waste to Nevada is a mistake. The area is geological unstable, the route is remote and would be subject to terrorist attacks.

Yucca mountain is not a good ideal anymore. The Las Vegas metro area will soon be home to three million people, plus it is one of the United States primary tourist attractions.

Nuclear waste should be stored near where it is produced, and not trucked across the country, through remote and vulnerable areas. However if the government insists on this preposterous plan, I suggest that the waste be shipped out of the country, perhaps to a poor country that needs money. we could pay them to store our waste. There are areas in Canada and Mexico that are quite remote and not near any major population centers.

If the price is right, one of these countries might accept our waste as a steady and reliable revenue stream
