Comment Text :  
-->The Yucca Mountain project begun back when the state of Nevada was a vast desert area. Population wise, very minute. Over the years, well.. you know exactly what happened. Nevada exploded( no pun intended). They should transport all that dangerous material up to upper and densely populated area of Alaska, or some deserted island in the middle of one of the oceans. Obviously, if any accidents, NO, or very little in numbers of people would be in danger. Bluntly, that dangerous material should be stored in the MOST BARREN spot on this earth, or on another planet. Thank you.
