 Comment Text :

-->The waste should be exhausted of all it's energy before it is discarded, it should be stored at the current power plants until we have approved that technology and transporting across the country will prove to be disruptive to our highway systems and the local economies. The Mina corridor is a minor link in a weak chain.

Having waiting out accidents with watermelons, milk and spent oil I can only imagine how dropping a load of nuclear waste would play with the local highway patrol and Hazmat. Whether the threat is real or not things would get dicey. One of the reasons I haven't felt threatened by the Yucca Mountain project is it's such an unrealistic solution.

I do not like the idea of Nevada being used for other people's radioactive waste and I hope it doesn't happen. Furthermore when it's being transported it will be a target for hijacking. PLEASE keep it safely stored where it can be used once the technology has been developed. I have heard they use up their waste in France. Happy Thanksgiving
