Comment Text :
-->As a Realtor, I would like to state that Yucca Mountain is not a safe repository for nuclear waste storage. It is not a safe geologic repository. Man made barriers will not make it so.

We need to stop using nuclear power as it is too dangerous to use. It is very costly when you factor in the dismantling of the plants at the end of their useful life. The ongoing threats of an attack is a major concern to Nevada and all states and countries in the path of the wind patterns from here.

The threats are not only against the Yucca site itself, but even easier to hit would be the vehicles transporting the waste to the site. Why have you changed from the Caliente Corridor to the even more dangerous Mina Corridor? Neither corridor is safe. We need to change immediately to alternative power sources that will not destroy us in an atomic blast, economically, and or ecologically.

It is time for clear thinking - a new turning point for our country thought for future generations.
