Hello Benjamin,

I just wanted to share a little info with you that might be helpful to you. I recently installed Norton Utilities program for Win 95. At the end of the install it prompts you to install a version 3.0 of Explorer. I am a faithful Netscape user but have been curious about this other browser. So I installed it. I did not get around to opening it up but I opened Netscape shortly thereafter. To my amazement my bookmarks were gone. All of them!!! Interestingly enough the bookmarks were pulled out of my program files where Netscape is located and then placed in the windows directory so that Explorer can utilize them. To me this is subtle form of sabotage which renders Netscape somewhat useless until I solve the problem by wasting my time copying and renaming files. Something that not every user will take the time or know how to do. If this info is of use to you please use what ever of this message you may need. This form of dirty competition only waist my time and is not healthy for the industry. Please keep me in your file for updates concerning these issues.
