

**Microsoft Platform Group
Opportunities & Challenges
for FY'97**

**Paul Maritz
Group VP, Platforms Group**

MS6 6008769
CONFIDENTIAL

Platforms in FY'97 - goals

- ◆ **Overcome the greatest challenge ever to our market position**
 - **The Internet/Intranet**
 - **Turn it to our advantage**
- ◆ **Add \$1+B in revenue in FY'97**
 - **\$0.5+B in Windows**
 - **\$0.5+B in BackOffice**
- ◆ **Lay the foundation to grow Platforms to “\$10B” by year 2000**
 - **Windows growth & price**
 - **BackOffice share gain & growth**

Three Key

Challenges/Opportunities

- ◆ **The Internet/Intranet**
 - strategic
- ◆ **Windows Desktop**
 - strategic & revenue (mainly OEM)
- ◆ **Windows NT Server & BackOffice**
 - strategic & revenue

The Competition

- ◆ **New “platforms”**
 - **Netscape**
 - **Java**
 - **The “Network Computer”**
- ◆ **“Old” platforms**
 - **Notes**
 - **Oracle**
 - **UNIX**

Challenge #1: The Intranet & Internet

MS6 6008773
CONFIDENTIAL

The Internet - why does it matter?

- ◆ Important paradigms introduced by Web:
 - User: pages/hyperlinks
 - Developers: “Interactive pages”
 - a new way of doing client-server apps
- ◆ They solve real problems
- ◆ Competitors are leading us in exploiting them:
 - Netscape: majority browser share
 - Java: mindshare

Netscape

- ◆ The first “middleware” layer to have end-user momentum
 - “Our goal is to reduce Windows to a partially debugged set of device drivers” Marc Andreessen
- ◆ Focused on client and server:
 - Navigator = Windows
 - Suitespot = BackOffice
- ◆ See near term revenue in the “Intranet”

MS6 6008775
CONFIDENTIAL

Demonstration

◆ Netscape 2.0

MS6 608776
CONFIDENTIAL

Java

- ◆ **Sun's goal is:**
 - **Java class library/runtime = new OS API**
 - **leverage this new API to replace Windows by JavaOS**

The “Network Computer”

◆ World hunger:

- corporations are fed up with cost of ownership of PC's

◆ The cure:

- a “\$500 network computer”

◆ The reality:

- functionality very limited
- no application base
- X-terminals all over again

◆ But the hunger is real!

- giving Sun, Oracle, IBM a new respectability
- customers are listening

The Internet/Intranet: our strategy

1. Win & retain Browser Share

current shares: IE 5-10%, Netscape ~40%, AOL ~25%

2. Offer users, developers, business a better synthesis: “best of PC, best of Web”

3. Own the Intranet with Office, Windows, BackOffice

4. Evangelize Webmasters to utilize our extensions & technology

5. Win Network Operator/ISP (“Internet Service Provider”) client & server design wins

Win & Retain Browser Share - embrace & extend

- ◆ **Implement all important Netscape features (IE3.0)**
- ◆ **Offer new differentiated features (ActiveX on IE3.0) on Windows & Mac**
- ◆ **Integrate with Windows (Nashville)**
- ◆ **Bootstrap share via Network Operators - eg. AOL**
- ◆ **Evangelize content providers and developers to exploit features**
- ◆ **FREE**

Synthesis - best of PC, best of Web

**The PC
revolution:**

Standalone apps

**The Internet
revolution:**

Static pages

**Interactive
distributed
applications:
Common paradigm
for client/server
computing**

**Interactive multimedia:
Richer communications
between *people***

MS6 6008781
CONFIDENTIAL

A better synthesis for:

◆ Developer:

- ActiveX - common way to develop client-server apps for PC LAN & Internet worlds
- Full set of tools

◆ User:

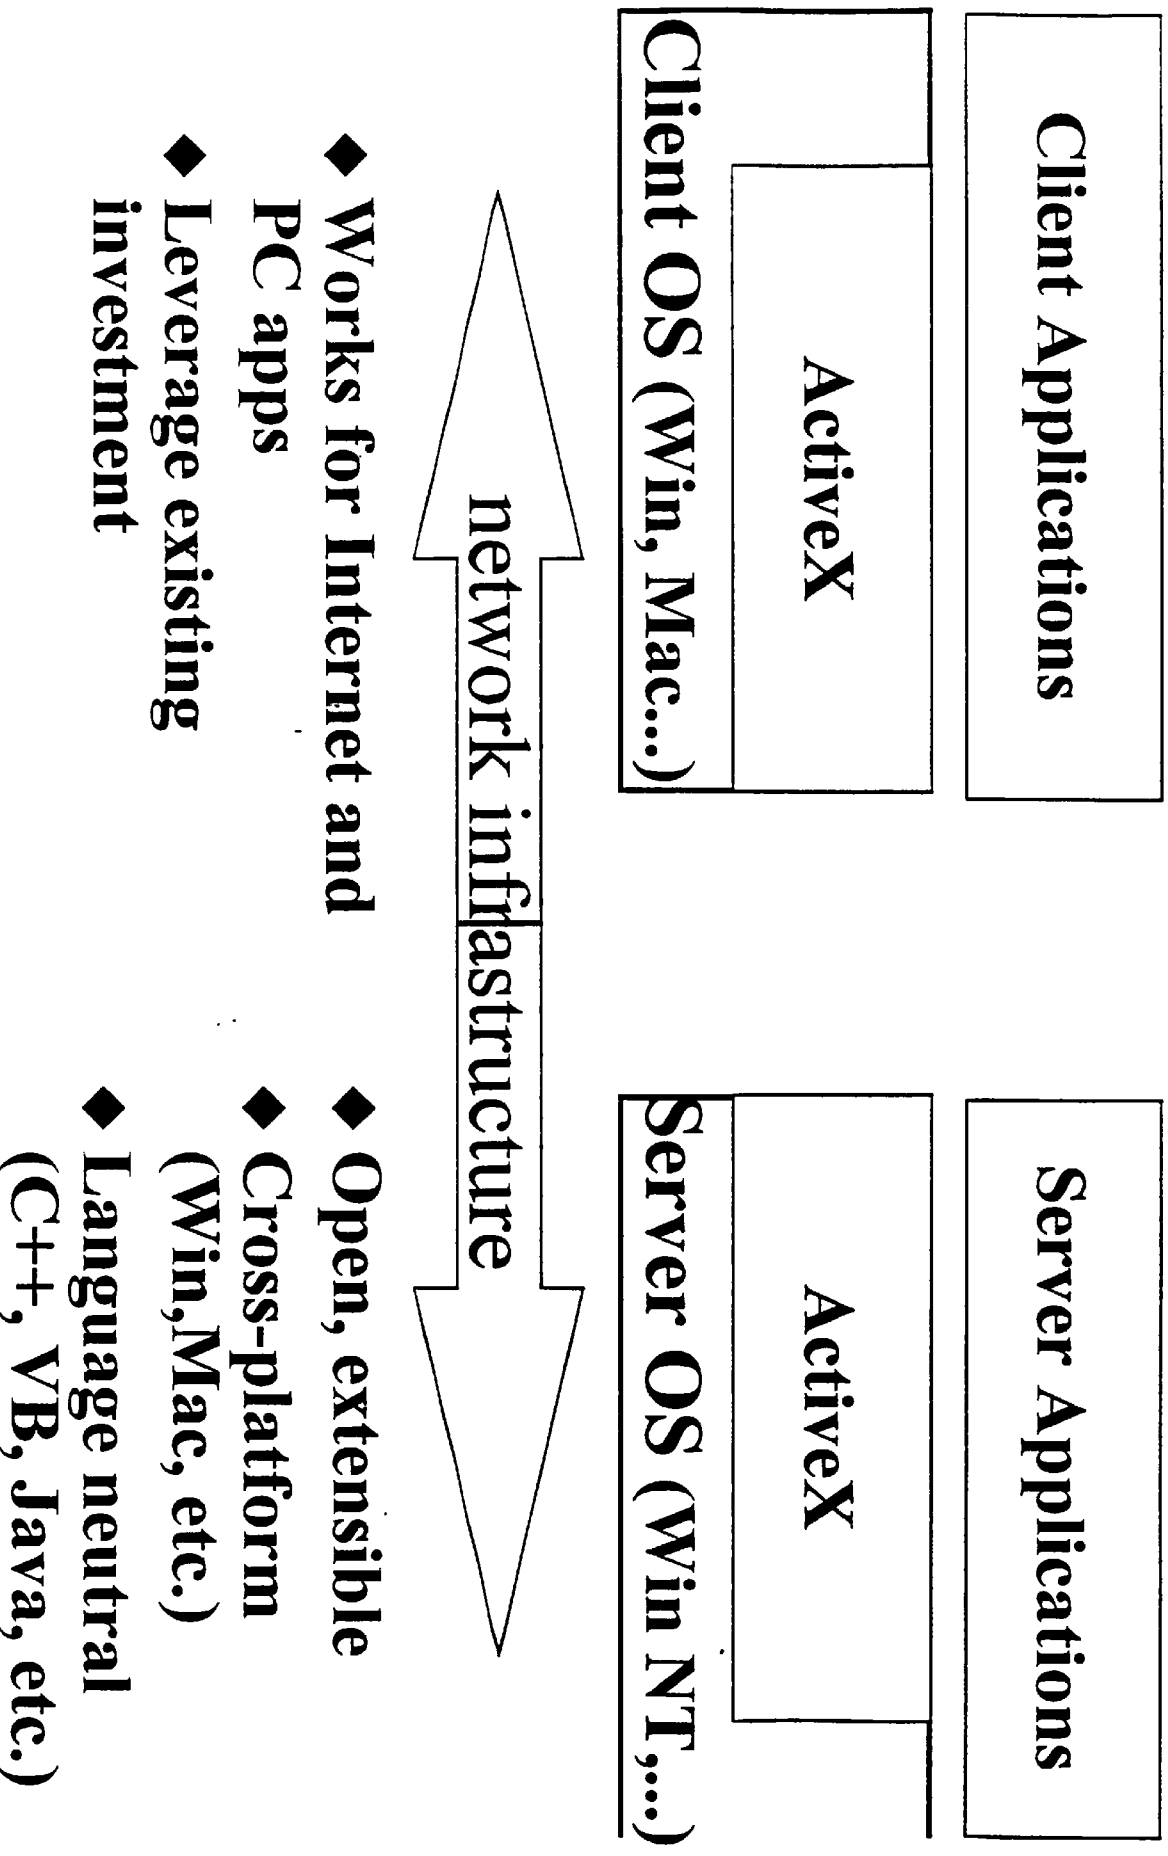

- Integrated paradigm & tool for finding & viewing information: local, LAN, online

◆ Business:

- common, upward compatible infrastructure for LAN, “Intranet”, Internet

Developer view: ActiveX

MS6-6008783
CONFIDENTIAL

Tools Family

MS6 6008784
CONFIDENTIAL

Less coding, more
like a “document”

More coding, more
like an “application”

ActiveX platform

What About Java?

- ◆ **Remove Java as confrontational issue**
- ◆ **Make Java part of ActiveX:**
 - **MS license from Sun**
 - **MS extensions to Java implementation for IE & Windows**
 - **Java applets appear automatically as ActiveX controls and vice versa**
 - **Encourage Java applet writers to make full use of Windows**

Embracing & extending for business:

the Intranet

Windows:

Integrated Explorer, one tool for viewing information

◆ Integrated platform

- Administration
- Security
- Scalable
- Complete
- Extensible

Microsoft

BackOffice:

Structured data

Messages

Web Pages

Existing files, documents

Extending Out To The World:

MS6 6008787
CONFIDENTIAL

Integrated Client

Structured data

Messages

WebPages

Existing files, documents

Integrated Services

Demonstration

- ◆ **ActiveX, Nashville, IIS/Web Connectors:**
 - **Integrated User View**
 - **Integrated Infrastructure for Business**

Standards & Partnership Announcements

MS6 6008789
CONFIDENTIAL

- ◆ **Internet client s/w: America Online**
- ◆ **Working with IETF, W3C on:**
 - security, HTML extensions, parental control, digital code signing, etc.
- ◆ **Real-time communications:**
 - Intel, Progressive Networks, major telco's
 - support of 100 others
- ◆ **ActiveX architecture: over 60 companies**
- ◆ **Java language: Sun**
- ◆ **Business Application Integration: SAP**
- ◆ **etc.**

Internet Actions needed

- ◆ **Communicate “best of PC, best of Web”**
 - **to users, developers, businesses**
 - **Windows/BackOffice/Office = Intranet**
- ◆ **Get Internet Explorer used everywhere**
 - **our is free**
 - **integrated into Windows**
- ◆ **Get premium regional web sites to use ActiveX**

Challenge #2: Windows Desktop

MS6 6008791
CONFIDENTIAL

- ◆ **Move the desktop to Win32**
 - **Office & Internet/Intranet thrusts depend on it**
 - **Move accounts from evaluation to deployment (less than 15% of Win95 capable machines have moved to Win95/NTW)**
- ◆ **Grow \$3.2B (FY'96) to ~\$3.8B (FY'97)**
 - **mainly OEM (\$2.8B in FY'97)**
 - **but \$1B in retail/maintenance**
- ◆ **Make Windows a \$6B business in FY'99**
 - **persuade more customers to choose higher priced version of Windows**
 - **(Win NTW price = 2x Win95)**

Windows Family Strategy

MS6 6008792
CONFIDENTIAL

Windows for
Server

◆ Common

Windows for
business
workstation

◆ Common
UI

◆ Common

Windows for
general user

◆ Common
32bit API

Win95/NTW evolution

- ◆ Major investment in both Win95 & NT in FY'97 & FY'98
- ◆ Increased sharing of technology
 - device drivers (“WDM”)
 - multimedia (DirectX)
 - Internet (UI, ActiveX)
 - Networking
 - etc.
- ◆ Goal of building Win9x & NT from common NT-derived kernel in future (FY'99+)

Windows NTW - realities

- ◆ **Windows NT 4.0 gets common UI,**
- ◆ **But Windows NTW still has major caveats in FY'97:**
 - **smaller device coverage**
 - **no plug & play**
 - **no easy upgrade from Win95**
- ◆ **Windows NT “Cairo” will provide easy upgrade over Win95**

Windows 95/NTW positioning

- ◆ **32bits is strategic:**
 - focus of all ISV's is now on Win32 API
 - Internet activity
- ◆ **CY1996/1997:**
 - Windows 95 is the easiest way to get to 32bits
 - compatibility
 - smaller footprint
 - Windows NTW is the most powerful
 - security, robustness, scalability
- ◆ **CY1998+:**
 - Windows NTW for all business users

Upcoming Windows Releases

1996 1997

MS6 6008796
CONFIDENTIAL

Win NT

Mid '96
Windows NT
4.0
◆ Windows 95
GUI

H2 '96
“Internet Add-
on” (aka
“Nashville”)
◆ Integrated
Shell/Browser*
◆ Simple Mail*
◆ Conferencing*
◆ Themes

Early '97
OEM &
retail:
◆ Include
Shellview

FY'98
“Cairo”

Win 95

Mid '96
OEM
refresh
inc. IE 3.0*

Early '97:
◆ OEM &
retail
◆ Include
Shellview

FY'98
“Memphis”

* free download too

Cairo Technologies

MS6 6008797
CONFIDENTIAL

- ◆ **Pulled forward to Windows NT 4.0**
 - **Distributed COM**
- ◆ **Windows NT Cairo**
 - **Distributed Security and Directory**
 - **Distributed Object File System built into NTFS**

Key Challenge #3: Windows NT Server & BackOffice

- ◆ **Grow to \$1.3+B business in FY'97
from \$0.8B in FY'96**
- ◆ **Increase share in:**
 - **server OS:**
 - **new application servers**
 - **file/print share from Novell**
 - **messaging**
 - **database**
- ◆ **Penetrate the small business
market**

Competition

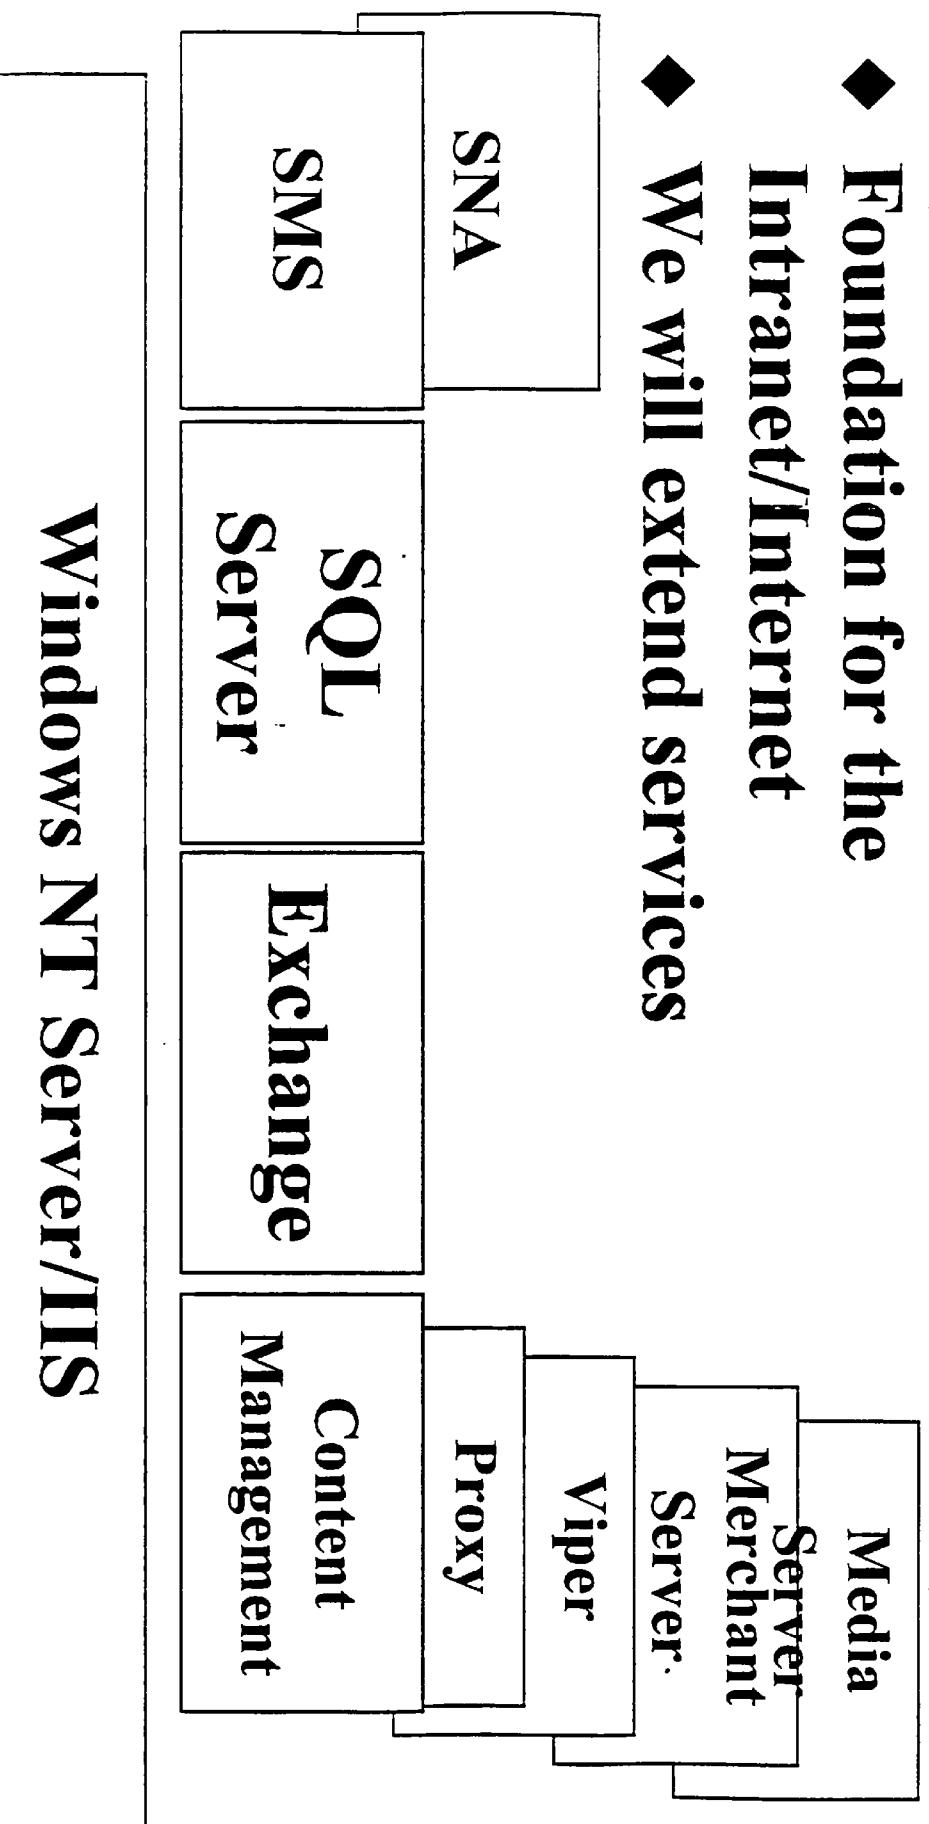

- ◆ **UNIX's: HP-UX, AIX, etc.**
 - Unix becoming a safe choice as a mainframe replacement
 - Offers higher margins on proprietary architectures
- ◆ **Oracle**
 - Leveraging their sales model against us
 - taking NT more seriously
- ◆ **Lotus Notes/IBM:**
 - Notes 4.0 good product
 - will talk the Internet talk

Windows NT Server

- ◆ **Ride the new generation of PC-based server platforms:**
 - **Pentium Pro & Alpha**
 - **Disk & Storage advances**
 - **Improving partnerships: Compaq, Digital, HP, SAP, Baan**
- ◆ **Advances in FY'97:**
 - **Increased scalability & perf. in Win NT4.0 SMP:**
 - **linear scaling with SQL 6.5 to 8 processors,**
 - **run on up to 32 processors**
- ◆ **Cluster initiative started:**
 - **failover in FY97, large scaling in FY98**

BackOffice

- ◆ We now have world class server applications in SQL Server & Exchange
- ◆ Foundation for the Intranet/Internet
- ◆ We will extend services

Exchange

MS6 6008802
CONFIDENTIAL

- ◆ **Exchange 4.0**
 - **Scalable, industrial-strength messaging**
 - **Workgroup support: scheduling, public folders, forms**
- ◆ **Exchange 4.1**
 - **Internet client protocol support (SMTP/POP3/NNTP)**
 - **Web connector**
- ◆ **Exchange 5.0**
 - **native HTML forms**

SQL Server

- ◆ **SQL 6.5**
 - **Ongoing investment**
 - **World class raw performance & price/performance**
 - **Scalability evidence**
 - **More benchmarks**
 - **8 processor scalability**
 - **Customer references (customer council)**
 - **Distributed Transaction Coordinator**

SQL Server

- ◆ **Channel development**
 - **more specialists in the field**
- ◆ **ISV recruitment**
- ◆ **Cost of Ownership study**

“SAW” – small business server suite

- ◆ **Easy to use small business platform**
 - **“Administratorless”**
 - **Easy setup**
- ◆ **Everything in one box**
 - **Mail**
 - **FAX**
 - **Modem Pooling**
 - **RAS**
 - **Web**
- ◆ **Low H/W footprint**
 - **Pentium with 32 MB**
 - **Everything on ONE server**
- ◆ **Available: H2’FY97**

Three Key Challenges/Opportunities

MS6 6008806
CONFIDENTIAL

- ◆ **The Internet/Intranet**
 - **strategic**
 - **overcome platform challenge, & use it to grow**
- ◆ **Windows Desktop**
 - **strategic & revenue (mainly OEM)**
 - **move client to 32bit**
- ◆ **Windows NT Server & BackOffice**
 - **grow & gain share with NTS & BackOffice apps**
 - **strategic & revenue**

Backup Slides

MS6 6008807
CONFIDENTIAL

Renewed Focus

MS6 6008808
CONFIDENTIAL

New organization:

- ◆ *Desktop and Business Systems - Jim Allchin*
 - Windows - client and server
 - Microsoft BackOffice
- ◆ *Internet Platform and Tools - Brad Silverberg*
 - Browser, Shell, Multimedia
 - Tools
 - Commerce Services
- ◆ *Consumer Platforms - Craig Mundie*
 - Non-PC (handheld, settop, etc)
 - Solutions for network operators

Road Map: Internet Client

MS6 6008809
CONFIDENTIAL

Now

- ◆ **Internet Explorer line**
 - **Win32, Mac, and Windows 3.1 support**
 - **Rapid releases**

Start FY97

- ◆ **Internet 3.0**
 - **“Componentized”: extensible, services available to other apps**
 - **Full ActiveX support: controls, scripting, multimedia**
 - **Netscape superset**

H1'FY97

- ◆ **Internet add-on (“Nashville”) for Windows 95, Windows NT**
 - **Integrated Windows and Internet Explorer**
 - **Communications: phone, conferencing**

Road Map: Internet Server

MS6 6008810
CONFIDENTIAL

Now

- ◆ **Microsoft BackOffice**
 - **Internet Information Server in Windows NT Server**
 - **Highest Performance Server**
 - **Extensible via ISAPI, ActiveX**
 - **Database connector for SQL Server**

H1'FY97

- ◆ **Additional services coming in H2 '96**
 - **Proxy**
 - **Content management**
 - **Microsoft Exchange connector**
 - **Merchant services**

Microsoft BackOffice Roadmap

H2
FY96

- BackOffice 2.0
- Windows NT
Server 3.51
- SNA Server
2.11
- SQL 6.5
- SMS 1.1
- Exchange 4.0
- Internet
Information
Server 1.0

H1
FY97

- BackOffice
"Shell Update"
- Windows NT
Server 4.0
- SNA Server
2.11
- SQL 6.5
- SMS 1.2
- Exchange 4.1
- Internet
Information
Server 2.0
- Content
Management

H2
FY97

- BackOffice
- Windows NT
Server 4.0
- SNA Server 3.0
- SQL 6.5
- SMS "Opal"
- Exchange 5.0
- Internet
Information
Server 3.0
- Proxy
- Merchant
- Small Business

SQL Server vs Oracle - Lower Cost

Oracle total costs 42% higher than SQL Server

Cost-to-Use (per month, per user over five years)

- ◆ User support costs 123% higher for Oracle
- ◆ Development costs 167% higher for Oracle
- ◆ DB operations costs 15% higher for SQL
- ◆ System costs 37% higher for Oracle

Oracle costs \$2,172 more per year, per user

Other things to know about

- ◆ **Network Operator Platform:**
 - **Winning Network Operator and Internet Service Providers server infrastructure is key**
 - **MS will have focused product and sales effort on this segment**

Other things to know about

- ◆ “Pegasus” client
 - MS in conjunction with 3-4 key OEMs will release handheld client in H1 FY97
 - Features:
 - “Windows Companion”
 - similar UI, API’s
 - easy exchange of information with desktop
 - Small form factor (pocket size)
 - Web browser
- ◆ Will yield technology base (with assets from ITV) to address other non-PC opportunities
