Table 1-23. Birth Rates by Age of Father and Race: United States, 1940, 1950, and 1960-2003

(Rates are live births per 1,000 men in specified group. Populations enumerated as of April 1 for census years and estimated as of July 1 for all other years. Figures for age of father not stated are distributed. Beginning in 1970, excludes births to nonresidents of the United States; see "Technical Appendix.")

--- Data not available.

1/ Rates computed by relating total births, regardless of age of father, to men aged 15-54 years.

2/ Rates computed by relating births to fathers under 20 years of age to men aged 15-19 years.

3/ Rates computed by relating births to fathers 55 years and over to men aged 55 years and over.

4/ Based on 100 percent of births in selected states and on a 50-percent sample of births in all other states; see "Technical Appendix."

5/ Based on a 50-percent sample of births.

6/ For method of adjustment, see "Technical Appendix."

7/ Figures exclude data for residents of New Jersey; see "Technical Appendix."

8/ Includes Aleuts and Eskimos.

NOTES: Race and Hispanic origin are reported separately on birth certificates. For years prior to 1990, rates are available for the category "all other" which includes races other than white and black; see table 1-23 in Vital Statistics of the United States, 1999, Volume I, Natality. Race categories are consistent with the 1977 Office of Management and Budget standards. In this table all men (including Hispanic men) are classified only according to their race; see "Technical Appendix." Six states reported multiple-race data in 2003. The multiple-race data for these states were bridged to the single-race categories of the 1977 Office of Management and Budget standards for comparability with other states; see "Technical Appendix."
