

## U.S. SMALL BUSINESS ADMINISTRATION WASHINGTON, D.C. 20416

DATE:	September 1, 2004
TO:	All SBIC Applicants and Other Interested Parties
THROUGH:	Ronald E. Bew Associate Deputy Administrator, Office of Capital Access
FROM:	Investment Division
SUBJECT:	Memorandum #2004-6 Improvements to Management Assessment Questionnaire (MAQ) and SBIC License Application

## Introduction

As part of the Investment Division's drive to improve its business operations, we are pleased to announce some important changes to the MAQ. First, the MAQ has been integrated with the SBIC license application, so that applicants do not need to rearrange and repeat information as they move from the MAQ stage to the formal license application stage. Second, the SBA is introducing a new Exhibit F for the purposes of presenting, evaluating, and tracking Principals' investment experience (see below).

Users should also be aware of certain small but important changes, such as the requirement that Exhibit D (the Legal Proceedings Questionnaire) be signed when submitted as part of the MAQ. Users will also notice that a number of the key Exhibits submitted with a formal license application, such as the Capital Certificate, have been reformatted for ease of use.

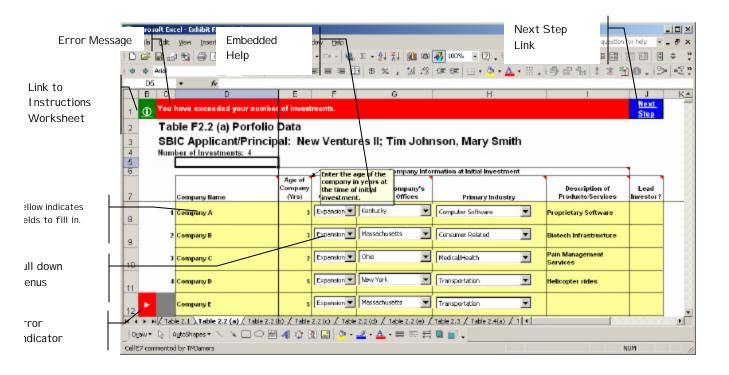

The revised MAQ and license application have been approved by the Office of Management and Budget (OMB) and must be used for all MAQs and license applications submitted after September 30, 2004.

Copies of the new MAQ and license application are available by contacting the SBA Investment Division's Office of Business Development via e-mail at sbic@sba.gov.

## **Description of Improvements**

- 1. <u>Fund Manager Attribution</u>. The MAQ will better address the question of fund manager "attribution" through the creation of new classifications under Exhibit F. Four different categories of funds will be created:
  - a. **Complete Fund**: To document experience of a Principal over the entire life of a fund, the "Complete Fund" category calculates overall fund performance, based on actual fund takedowns, distributions, and residual value. Calculations include IRR, distributions to paid-in capital (DPI), and residual value to paid-in capital. Based on the fund's vintage year, the SBA will link performance history with comparative benchmark information available from published sources.
  - b. **Partial Fund**: To document experience of a Principal who either started late or left early in a fund's life, the "Partial Fund" category compares the fund at the time each Principal joined the firm, including a review of performance both during and after the Principal's tenure. Distributions to paid-in capital and residual value to paid-in capital are automatically calculated, allowing the SBA to understand more precisely what value such Principal contributed while at the fund.
  - c. **Synthesized Fund**: To document qualified "one-off" transactions forming part of a team's track record, the "Synthesized Fund" category calculates management fees, takedowns, distributions, and carried interest, using standard assumptions. The applicant may elect to override these numbers, as appropriate.
  - d. **Other Investments**: This category documents transactions that do not otherwise fall under any of the above categories.

2. <u>User-Friendly Features</u>. Exhibit F of the MAQ will include pull-down menus, embedded help, and a level of error checking – providing greater assistance to applicants. Here is an example:

3. <u>Automatically Generated Performance Reports</u>. Until now, Exhibit F of the MAQ has been a valuable yet underutilized tool for evaluating *and tracking* the investment experience of prospective SBIC fund managers. The new improvements will make it easier for SBA analysts to evaluate and benchmark funds according to stage of investment and industry focus – linking data to standard industry benchmarks. Analytical reports will be created and used over the life of a particular fund manager's or team's experience in the SBIC program. As a result, we expect a considerable reduction in time and expense both in evaluating applications and monitoring performance of licensed SBICs.

Based on a single set of investment inputs, these automatically generated reports will calculate gross financing and net fund statistics, providing performance graphics, including:

- Portfolio Investments By Financial Performance (benchmarked to industry)
- Portfolio Companies By Region
- Portfolio Investments By Distributions (company-specific cost, proceeds, and gains/losses to fund)
- Portfolio Investments By Industry (sector-specific cost, proceeds and gains/losses to fund)
- Portfolio Investments By Stage (seed, early, later, expansion, change of control, turnaround)
- Portfolio Investments By Fund Lead Status (sole investor, syndicate lead, colead, or participant)

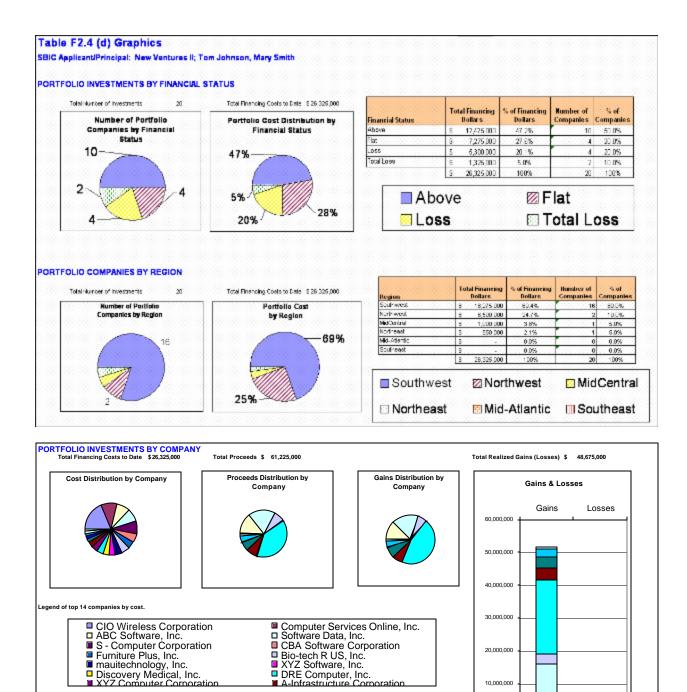

These new features will be added to Exhibit F using nearly identical information currently required from SBIC applicants.

Graphic examples of the analytical reports that the SBA will create from the input forms are shown below. <u>Note</u>: Both the names and companies are fictitious; any resemblance to an actual company or person is unintentional.
