Producer Price Indexes – October 2008

The Producer Price Index for Finished Goods fell 2.8 percent in October, seasonally adjusted, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. This decrease followed a 0.4-percent decline in September and a 0.9-percent fall in August. At the earlier stages of processing, prices received by manufacturers of intermediate goods moved down 3.9 percent in October after declining 1.2 percent in September, and the crude goods index dropped 18.6 percent subsequent to a 7.9-percent decrease in the previous month. (See table A.)

Among finished goods in October, prices for energy goods fell 12.8 percent compared with a 2.9-percent decline a month earlier. The index for consumer foods edged down 0.2 percent following a 0.2-percent increase in the prior month. Prices for goods other than foods and energy rose 0.4 percent for the second consecutive month.

**Table A. Monthly and annual percent changes in selected stage-of-processing price indexes,
seasonally adjusted**

| Month | Finished goods | | | | | Intermediate goods | Crude goods |
|-------------------------|----------------|-------|--------|-------------------------|--|--------------------|-------------|
| | Total | Foods | Energy | Except foods and energy | Change in finished goods from 12 months ago (unadj.) | | |
| 2007 | | | | | | | |
| Oct..... | 0.5 | 1.3 | 1.1 | 0.1 | 6.1 | 0.6 | 4.0 |
| Nov..... | 2.6 | -0.2 | 11.7 | 0.3 | 7.3 | 2.9 | 6.8 |
| Dec..... | -0.5 | 1.3 | -3.5 | 0.1 | 6.2 | 0.2 | 1.8 |
| 2008 | | | | | | | |
| Jan..... | 1.2 | 1.7 | 2.2 | 0.6 | 7.4 | 1.2 | 2.9 |
| Feb..... | 0.3 | -0.6 | 1.0 | 0.4 | 6.5 | 0.9 | 3.9 |
| Mar..... | 0.9 | 1.4 | 2.5 | 0.1 | 6.7 | 2.4 | 6.7 |
| Apr..... | 0.3 | 0.0 | -0.1 | 0.5 | 6.4 | 1.0 | 4.7 |
| May..... | 1.4 | 0.6 | 5.3 | 0.2 | 7.3 | 2.7 | 6.1 |
| June ¹ | 1.7 | 1.5 | 5.6 | 0.2 | 9.1 | 2.2 | 2.8 |
| July ¹ | 1.2 | 0.3 | 2.9 | 0.8 | 9.8 | 2.5 | 5.5 |
| Aug..... | -0.9 | 0.3 | -4.6 | 0.2 | 9.6 | -1.0 | -11.9 |
| Sept..... | -0.4 | 0.2 | -2.9 | 0.4 | 8.7 | -1.2 | -7.9 |
| Oct..... | -2.8 | -0.2 | -12.8 | 0.4 | 5.2 | -3.9 | -18.6 |

¹ Some of the figures shown above and elsewhere in this release may differ from those previously reported because data for June 2008 have been revised to reflect the availability of late reports and corrections by respondents.

Before seasonal adjustment, the Producer Price Index for Finished Goods declined 2.6 percent in October to 177.3 (1982 = 100). For the 12 months ended in October, finished goods prices advanced 5.2 percent. Over the same period, prices for finished consumer foods climbed 6.5 percent, the index for finished energy goods increased 5.5 percent, and the index for finished goods other than foods and energy rose 4.4 percent. From October 2007 to October 2008, prices received by intermediate goods producers advanced 10.2 percent, while the crude goods index decreased 1.4 percent.

Finished goods

The index for finished energy goods moved down 12.8 percent in October following a 2.9-percent decline in September. Gasoline prices dropped 24.9 percent after falling 0.5 percent a month earlier. The indexes for liquefied petroleum gas, diesel fuel, and residential electric power also decreased more than in the prior month. Prices for asphalt and finished lubricants turned down in October. By contrast, partially offsetting the faster rate of decline in finished energy goods prices, the index for residential natural gas moved down 5.9 percent compared with an 8.2-percent decline in September. Prices for home heating oil also fell less than in the previous month. (See table 2.)

The index for finished consumer foods edged down 0.2 percent in October after rising 0.2 percent in September. Leading this downturn, meat prices decreased 5.6 percent subsequent to a 0.6-percent fall a month earlier. Prices for mayonnaise, salad dressings, and sandwich spreads; unprocessed finfish; and canned fruits and juices turned down in October. By contrast, the processed young chickens index increased 5.9 percent following a 0.6-percent decline in September. Prices for natural cheese (except cottage cheese) and melons also turned up in October. The indexes for fresh vegetables (except potatoes) and for sugar and confectionary products advanced more than they had a month earlier.

Table B. Monthly and annual percent changes in selected price indexes for intermediate goods and crude goods, seasonally adjusted

| Month | Intermediate goods | | | | Crude goods | | | |
|-------------------------|--------------------|--------|-------------------------|--|-------------|--------|-------------------------|---|
| | Foods | Energy | Except foods and energy | Change in intermediate goods from 12 months ago (unadj.) | Foods | Energy | Except foods and energy | Change in crude goods from 12 months ago (unadj.) |
| 2007 | | | | | | | | |
| Oct..... | 1.2 | 1.3 | 0.4 | 5.7 | -0.2 | 8.2 | 1.5 | 26.8 |

| May..... | 1.9 | 6.3 | 1.7 | 12.7 | 0.9 | 11.7 | 1.7 | 40.9 |
| June ¹ | 1.1 | 4.8 | 1.4 | 14.7 | 2.7 | 3.8 | 0.5 | 43.6 |
| July ¹ | 4.1 | 4.4 | 1.7 | 16.6 | 0.6 | 9.4 | 3.7 | 51.2 |
| Aug..... | -0.2 | -8.2 | 1.7 | 16.7 | -5.2 | -19.4 | -1.9 | 38.1 |
| Sept..... | -0.9 | -3.8 | -0.3 | 15.4 | -1.1 | -11.7 | -9.4 | 26.0 |
| Oct..... | -5.5 | -10.6 | -1.7 | 10.2 | -11.1 | -24.9 | -17.0 | -1.4 |

¹ Some of the figures shown above and elsewhere in this release may differ from those previously reported because data for June 2008 have been revised to reflect the availability of late reports and corrections by respondents.

The index for finished goods other than foods and energy increased 0.4 percent in October, the same as in September. Price increases for light motor trucks, civilian aircraft, malt beverages, rubber and rubber products, consumer plastic products, and for commercial nonwood furniture and store fixtures were partially offset by price decreases for passenger cars, pharmaceutical preparations, and for electronic computers and computer equipment. In accordance with usual practice, most new-model-year passenger cars and light motor trucks were introduced into the PPI in October. (See *Report on Quality Changes for 2009 Model Vehicles*, USDL 08-1712.) In October, the index for passenger cars moved down 1.7 percent and light motor truck prices rose 2.6 percent. For the 12 months ended October 2008, the passenger cars index rose 2.4 percent and prices for light motor trucks advanced 2.6 percent.

Intermediate goods

The Producer Price Index for Intermediate Materials, Supplies, and Components declined 3.9 percent in October after falling 1.2 percent in September. The indexes for intermediate energy goods, materials for nondurable manufacturing, intermediate foods and feeds, and materials for durable manufacturing also decreased more in October than they had a month earlier. Prices for materials and components for construction turned down after rising in September. (See table B.)

The index for intermediate energy goods dropped 10.6 percent in October after falling 3.8 percent in the prior month. Diesel fuel prices declined 16.4 percent following a 6.4-percent decrease in September. The indexes for gasoline, jet fuel, residual fuels, natural gas to electric utilities, commercial natural gas, and liquefied petroleum gas also fell more in October. By contrast, partially offsetting the faster rate of decline in the intermediate energy goods index, industrial electric power prices advanced 2.6 percent after decreasing 1.4 percent in September. The index for commercial electric power moved up after no change a month earlier. (See table 2.)

The index for materials for nondurable manufacturing decreased 4.6 percent in October following a 2.9-percent decline in the previous month. Prices for primary basic organic chemicals plunged 20.8 percent after moving down 7.4 percent in September. The indexes for fertilizer materials and synthetic fibers turned down in October. Prices for basic inorganic chemicals, medicinal and botanical chemicals, and synthetic rubber rose less than in the preceding month. The indexes for inedible fats and oils and for meats fell more than they had in September. By contrast, the index for cyclic intermediate chemicals and dyes was unchanged in October following a 2.2-percent decline a month earlier. Prices for woodpulp fell less than in September.

Prices for intermediate foods and feeds decreased 5.5 percent in October compared with a 0.9-percent decline in the prior month. The index for prepared animal feeds fell 8.6 percent after edging down 0.3 percent in the preceding month. Prices for meats, fats and oils, and fluid milk products also decreased more than they had in September. The indexes for processed eggs and for mayonnaise, salad dressings, and sandwich spreads turned down in October. Conversely, the index for processed young chickens advanced 5.9 percent after falling 0.6 percent in September. Prices for natural cheese (except cottage cheese) also turned up in October. The indexes for sugar and confectionery products and for canned, cooked, smoked, and prepared poultry rose more than they had in September.

Prices for materials and components for construction declined 0.7 percent in October after increasing at the same rate in the preceding month. The index for paving mixtures and blocks fell 3.7 percent following a 3.1-percent September gain. Prices for structural, architectural, and pre-engineered metals products; ready-mix concrete; treated wood; cast iron pressure and soil pipe and fittings; and sheet metal products also turned down in October. The indexes for nonferrous wire and cable and for softwood lumber decreased more than they had a month earlier. Conversely, millwork prices rose 0.6 percent in October after inching up 0.1 percent in the prior month. Prices for gypsum products turned up after falling in September.

Prices for materials for durable manufacturing declined 4.1 percent in October after falling 3.2 percent in the preceding month. The index for hot rolled steel bars, plates, and structural shapes dropped 8.5 percent following a 4.4-percent decrease in September. Prices for nonferrous wire and cable, both hot and cold rolled steel sheet and strip, softwood lumber, and primary nonferrous metals also fell more in October than a month earlier. The index for synthetic fibers turned down after increasing in the previous month. By contrast, the rate of decline in prices for semifinished steel mill products slowed from 4.8 percent in September to 1.9 percent in October. The index for copper and brass mill shapes also fell less than it had in the prior month.

Crude goods

The Producer Price Index for Crude Materials for Further Processing dropped 18.6 percent in October following a 7.9-percent decline in September. The faster rate of decrease in crude goods prices was broad based: the indexes for energy goods, foodstuffs and feedstuffs, and nonfood materials less energy all fell more in October than they had in the prior month. (See table B.)

The index for crude energy goods decreased 24.9 percent in October after moving down 11.7 percent in September. Crude petroleum prices fell 26.0 percent subsequent to a 9.0-percent decline in the preceding month. The natural gas index also dropped more in October than it had in September – 29.1 percent and 16.5 percent, respectively. Coal prices advanced 0.4 percent in October following a 0.7-percent increase a month earlier. (See table 2.)

The index for crude foodstuffs and feedstuffs declined 11.1 percent in October after falling 1.1 percent in the preceding month. Prices for Irish potatoes for processing dropped 41.8 percent following a 258.7-percent surge in September. The indexes for ungraded chicken eggs and slaughter sows also turned down in October. Prices for corn, soybeans, wheat, and slaughter cattle decreased more than they had in September. By contrast, slightly counteracting the faster rate of decline in crude foodstuffs and feedstuffs prices, the index for slaughter chickens jumped 7.0 percent in October subsequent to a 1.0-percent drop in the prior month. Prices for fluid milk and for slaughter barrows and gilts decreased at slower rates than they had in September.

The index for crude nonfood materials less energy fell 17.0 percent in October subsequent to a 9.4-percent decline in the previous month. Prices for carbon steel scrap dropped 39.8 percent after decreasing 22.5 percent in September. The indexes for nonferrous scrap, wastepaper, soybeans, and grains also moved down more in October than they had a month earlier. Prices for raw cotton and phosphates turned down after rising in September. Conversely, the gold ores index increased 10.5 percent in October following a 6.0-percent decline in the prior month. Prices for copper ores fell less than in September, while the index for construction sand, gravel, and crushed stone rose more in October than it had a month earlier.

Net output price indexes

Mining, Utilities, and Manufacturing Industries. The Producer Price Index for the Net Output of Total Mining, Utilities, and Manufacturing Industries dropped 3.4 percent after decreasing 0.5 percent in September. (Net output price indexes are not seasonally adjusted.) The industry index for petroleum refineries declined 22.6 percent in October after falling 0.9 percent a month earlier. Prices received by the industries for electric power distribution, crude petroleum and natural gas extraction, and livestock slaughtering also decreased more than in the prior month. Indexes for the phosphatic fertilizer and for the medicinal and botanical manufacturing industries, as well as, for potassium and sodium compounds (except bleaches, alkalies, and aluminum compounds) turned down after rising in September. By contrast, partially offsetting the faster rate of decline in the index for Total Mining, Utilities, and Manufacturing Industries, the rise in the index for automobile, light truck, and utility vehicle manufacturing accelerated to 7.6 percent in October from 0.1 percent in the preceding month. Prices received by the electric power generation industry turned up after declining in September. In October, the index for total mining, utilities, and manufacturing industries was 112.6 (December 2006 = 100), 7.5 percent above its year-ago level.

Trade Industries. The Producer Price Index for the Net Output of Total Trade Industries turned up 2.8 percent following a 1.2-percent decrease in September. (Trade indexes measure changes in margins received by wholesalers and retailers.) About half of the upturn can be accounted for by the margin index for gasoline stations with convenience stores, whose increase accelerated to 46.1 percent in October from 0.4 percent in the prior month. Margins received by merchant wholesalers of both nondurable and durable goods, fuel dealers, department stores, specialty food stores, and supermarkets and other grocery stores turned up after declining a month earlier. Conversely, the margin index for family clothing stores turned down 4.8 percent after rising 1.9 percent in September. In October, the index for total trade industries was 114.2 (December 2006 = 100), 8.7 percent above its year-ago level.

Transportation and Warehousing Industries. The decline in the Producer Price Index for the Net Output of Total Transportation and Warehousing Industries slowed to 0.4 percent in October from 0.9 percent in the prior month. The index for the general freight trucking industry sector fell 0.6 percent following a 2.3-percent decrease in September. Prices received by the scheduled air transportation industry group turned up after declining in the prior month. Conversely, the industry index for couriers turned down 3.1 percent in October after rising 0.1 percent a month earlier. Prices received by line-haul railroads also fell after climbing in September. The industry indexes for freight transportation arrangement and long distance specialized freight trucking of new goods decreased more than in the preceding month. Prices received by the industry for local specialized freight trucking of new goods declined in October after no change in the previous month, and the index for inland water freight transportation rose less than in September. In October, the index for total transportation and warehousing industries was 114.5 (December 2006 = 100), 8.4 percent above its year-ago level.

Traditional Service Industries. The Producer Price Index for the Net Output of Total Traditional Service Industries turned up 0.3 percent in October after falling 0.2 percent a month earlier. The index for non-casino hotels and motels increased 3.5 percent following a 6.4-percent drop in September. Prices received by software publishers and savings institutions also turned up after decreasing in the previous month. The indexes for investment banking and securities dealing and for general medical and surgical hospitals rose more than in September. Conversely, the advance in the index for commercial banking slowed to 0.1 percent in October from 1.3 percent in the prior month. Prices received by portfolio managers and by securities brokers decreased more than in September. In October, the index for total traditional service industries was 102.6 (December 2006 = 100), 0.4 percent above its year-ago level.

Producer Price Index data for November 2008 are scheduled to be released on Friday, December 12, 2008 at 8:30 a.m. (EST).

PPI Commodity Weight Allocations to Stage-of-Processing Indexes to be Updated

Effective with the release of January 2009 data on February 19, 2009, the Bureau of Labor Statistics will update the weight allocations used to calculate its stage-of-processing (SOP) indexes to more accurately reflect recent sales patterns. While PPI weights will continue to be based on shipment values from the 2002 economic census, the proportion of these weights allocated to the various SOP categories within and, in some cases, across the Finished, Intermediate, and Crude goods stages will change. The new allocations will be based primarily on data contained in the 2002 Input/Output Accounts published by the Bureau of Economic Analysis.

It is important to note that the allocation update will not change the PPI classification system, reference base, or aggregation structure. It may, however, result in significant shifts in the relative importance of component series in the stage-of-processing indexes.

Relative importance figures as of December 2008, will be available on February 17, 2009 on the BLS Web site at: www.bls.gov/ppi. Choose the "PPI Tables" link, under the "On This Page" heading. The revised SOP relative importance figures will be available through the links: "Component series by stage of processing" and "Commodity groupings by major stage of processing category." The information may also be requested from the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information, at 202-691-7705. For further information on this change, please contact Jon Weinhagen at (202) 691-7709.

Technical Note

Brief Explanation of Producer Price Indexes

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measure the average change over time in the prices received by domestic producers of goods and services. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices can differ due to government subsidies, sales and excise taxes, and distribution costs.

More than 8,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the construction, trade, finance, and services sectors of the economy.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Stage-of-processing indexes, (2) commodity indexes, and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Stage-of-Processing Indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final-demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, as well as nondurable goods such as apparel and home heating oil. Capital equipment includes durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

Commodity Indexes

The commodity classification structure of the PPI organizes products by similarity of end use or material composition, disregarding industry of origin. Fifteen major commodity groupings (two-digit commodity codes) make up the All Commodities Index. Each major commodity grouping includes (in descending order of aggregation) subgroups (three-digit codes), product classes (four-digit codes), subproduct classes (six-digit codes), item groupings (seven-digit codes) and individual items (eight-digit codes).

Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 5 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes); Census product classes (7- and 8-digit codes), products (9-digit codes), and more detailed subproducts (11-digit codes); and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product categories. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products make up a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products—for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Data Collection

PPIs are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms also are chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. This survey is conducted primarily through the mail.

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of actual prices. All PPIs are subject to revision 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI with the release of data for January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service sector industries have been introduced into the PPI. The following list of recently introduced industries includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

Service sector industries introduced into the Producer Price Index, by SIC or NAICS code and the *PPI Detailed Report* that announces their introduction

Weights

Weights for most traditional commodity groupings of the PPI, as well as weights for commodity-based aggregate indexes calculated using traditional commodity groupings, such as stage-of-processing indexes, currently reflect 2002 values of shipments as reported in the *Census of Manufactures* and other sources. From January 2002 through December

2006, PPI weights were derived from 1997 shipment values. Industry indexes now are calculated with 2002 weights and 1997 net output ratios. This periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity price indexes are based on gross shipment values, including values of shipments between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities, are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct for this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982 = 100. From 1971 through 1987, the standard reference base for most PPI series was 1967 = 100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The 1982 reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, "Producer Prices," in *BLS Handbook of Methods* (April 1997), Bulletin 2490. This document can be downloaded from the BLS Web site at www.bls.gov/opub/hom/homch14_itc.htm. Reprints are available on request.

Calculating Index Changes

Each PPI measures price changes from a reference period that equals 100.0. An increase of 5.5 percent from the reference period in the Finished Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: prices received by domestic producers of a sample of finished goods have risen from \$100 in 1982 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

Index point change

| | |
|----------------------------|-------|
| Finished Goods Price Index | 107.5 |
| Less previous index | 104.0 |
| Equals index point change | 3.5 |

Index percent change

| | |
|-------------------------------|-------------|
| Index point change | 3.5 |
| Divided by the previous index | 104.0 |
| Equals | 0.034 |
| Result multiplied by 100 | 0.034 x 100 |
| Equals percent change | 3.4 |

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited when escalating long-term contracts such as purchasing agreements or real estate leases. For more information, see *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 807, September 1991, on the Web at www.bls.gov/ppi/pptiescalation.htm. Reprints are available on request.

In 1998, the PPI implemented the X-12-ARIMA Seasonal Adjustment Method; prior to that year, the PPI employed the X-11 method. Each year, the seasonal status of most commodity indexes is reevaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or an aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than does the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-processing indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (six-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it adequately; if the pattern keeps shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products, but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of nearly 800 seasonally adjusted series, only 16 were subject to intervention in 2008.

For more information relating to seasonal adjustment methods, see (1) "Appendix A: Seasonal Adjustment Methodology at BLS," in the *BLS Handbook of Methods* (April 1997), Bulletin 2490 and (2) "Summary of Changes to the PPI's Seasonal Adjustment Methodology" in the January 1995 issue of *Producer Price Indexes*.

Producer Price Index Data on the Internet

In 1995, the BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, use of these sites eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed Report*. There were more than 2.1 million instances of PPI series being downloaded from the Internet during the 12 months ended December 31, 2007.

Retrieving PPI data from the PPI Web site

PPI data can be obtained from the WWW address (www.bls.gov/ppi). Clicking on the "PPI Databases" link reveals the following methods of data retrieval:

- **Top Picks** is a form-based application for both Industry Data and Commodity Data that allows the user to quickly obtain PPI time series data by selecting the most commonly requested time series, including the All Commodities Index and the stage-of-processing indexes (for example, Finished Goods). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.
- **One-Screen Data Search and Multi-Screen Data Search** are form-based query applications for both Industry Data and Commodity Data designed for users unfamiliar with the PPI coding structure. These

applications guide a user through the PPI classification system by listing index titles and do not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user's browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple-screen, non-Java-based application. Both methods allow a user to browse the PPI coding structure and select multiple series codes. Using the one-screen option, users can modify the date range and output options after executing the query using the reformat button above the data output table.

- **Series Report** is a form-based application that uses formatted PPI time series identifiers (commodity or industry codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at a time.

There are five alphabetic prefixes used to create unique PPI time series identifiers: WP, WD, PC, PD, and ND. Each provides the user access to a different PPI database. Adding either a "u" (not seasonally adjusted) or an "s" (seasonally adjusted) to the end of these prefixes further specifies the type of data needed.

EXAMPLES

For commodity and stage-of-processing indexes, series identifiers combine a "wpu" prefix (not seasonally adjusted) or a "wps" prefix (seasonally adjusted) with a commodity code.

| <u>Commodity code</u> | <u>Provides data for:</u> |
|-----------------------|---|
| wps141101 | Passenger cars, seasonally adjusted |
| wpu141101 | Passenger cars, not seasonally adjusted |
| wpusop3000 | Finished goods, not seasonally adjusted |

For discontinued commodity indexes, series identifiers combine a "wdu" prefix (not seasonally adjusted) or a "wds" prefix (seasonally adjusted) with a commodity code.

| <u>Commodity code</u> | <u>Provides data for:</u> |
|-----------------------|---|
| wds019 | Other farm products, seasonally adjusted |
| wdu0635 | Preparations, ethical (prescription), not seasonally adjusted |
| wdusi138011 | Stainless steel mill products, not seasonally adjusted |

Current price indexes grouped by industry according to NAICS have series identifiers that begin with the prefix “pcu.” After the prefix, there are 12 digits (the 6-digit industry code is listed twice) followed by up to 7 alphanumeric characters identifying product detail. Dashes are used as placeholders for higher-level industry group codes.

*Industry-product code,
current NAICS series*

pcu325---325---

pcu336110336110

pcu621111621111411

pcu325412325412A

Provides data for:

Chemical manufacturing, not seasonally adjusted
Automobile and light duty motor vehicle manufacturing
Offices of physicians, one-and two-physician practices and single-specialty group practices, general/family practice
Pharmaceutical preparation manufacturing, pharmaceuticals acting on the respiratory system

Discontinued industry-product codes based on SIC combine a “pdu” prefix and “#” between the fourth and fifth characters of the product code. Series identifiers for the discontinued dataset use underscores as placeholders to complete a reference to an SIC industry group code of fewer than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of NAICS.)

*Industry-product code,
discontinued SIC series*

pdu28__#

pdu331_#

pdu3711#111

Provides data for:

Chemicals and allied products, not seasonally adjusted
Blast furnaces, steel works, and rolling and finishing mills, not seasonally adjusted
Passenger cars

Price indexes for discontinued series grouped by industry according to NAICS have identifiers that begin with the prefix “ndu.” After the prefix, there are 12 numeric digits (the 6-digit industry code is listed twice), and up to 7 additional alphanumeric characters that identify product detail. Dashes are used as placeholders for higher-level industry group codes.

*Industry-product code,
discontinued NAICS series*

ndu212231212231

ndu2122312122312

ndu212231212231214

Provides data for

Lead ore and zinc ore mining
Lead and zinc concentrates
Lead concentrates

- **Text Files (FTP)** and the FTP server are best suited for users requiring access to either a large volume of time series data or other PPI-related documentation (such as seasonal factor and relative importance tables). The FTP sites can be accessed at **ftp://ftp.bls.gov** or directly from the links on the “PPI Databases” page or the PPI homepage. Data and documentation available for download include the following:

| | <i>Directory:</i> |
|---|---------------------------|
| Industry Data | /pub/time.series/pc |
| Industry Data - Discontinued (NAICS basis) | /pub/time.series/nd |
| (SIC basis) | /pub/time.series/pd |
| Commodity Data | /pub/time.series/wp |
| Commodity Data - Discontinued Series | /pub/time.series/wd |
| Special requests | /pub/special.requests/ppi |

The FTP site maintains files to help with searches and downloads. These files are centrally located in the **/pub/doc** directory. Within this directory, the **overview.txt** file contains an overview relating to all BLS data available through the FTP site. For current commodity-based PPI data, the program help file is **wp.txt**; for discontinued commodity series, **wd.txt**; for current industry-based PPI data based on NAICS, **pc.txt**; for industry-based SIC time series that have been discontinued, **pd.txt**; and for industry-based NAICS series that have been discontinued, **nd.txt**.

Users who prefer downloading PPI datasets as individual ZIP files should go to the directory labeled **/pub/time.series/compressed/tape.format/** on the FTP site. This directory includes six PPI-specific ZIP files, one for each of the PPI databases—WP, WD, PC, ND, and PD—and a ZIP file for the annual 5-year revision to historical seasonal PPIs.

Other Sources of PPI Data

PPI data can also be accessed via the BLS homepage (www.bls.gov). Clicking on the “Databases & Tables” tab at the top of the homepage calls up a listing all available BLS programs.

Additional information

The PPI homepage (www.bls.gov/ppi) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “Tables Created by BLS” section found beneath the

statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information at (202) 691-7705 or *ppi-info@bls.gov*.

| Commercial machinery repair and maintenance..... | 8113 | 06/06 | 105.6 | 106.5 | 106.4 | 2.7 | -0.1 |

1 Indexes in this table are derived from the net-output-weighted industry price indexes. Because of differences in coverage and aggregation methodology, they will generally not match the movements of similarly titled indexes which are derived from traditional commodity groupings.

2 The indexes for June 2008 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

“” Data not available.

NOTE: NAICS replaced the SIC system beginning with the release of PPI data for January 2004.

See <http://www.bls.gov/ppi/ppinaics.htm> for details.

Table 5. Producer price indexes by stage of processing, seasonally adjusted
 [1982=100]

| Grouping | Index ¹ | | | | | |
|---|--------------------|-----------|-----------|-----------|------------|-----------|
| | May 2008 | June 2008 | July 2008 | Aug. 2008 | Sept. 2008 | Oct. 2008 |
