Subject: BPA

Dr. Shane,

I listened to Dr. Shelby on NPR and found his interview to be shocking. He stated that he has no qualms about continuing to drink bottles containing BPA. He also proffered no opinion and was rather insensitive on whether baby bottles are safe. The very next day the Canadian government banned these products and here in this country Wal-Mart began to remove all of these products from the shelves.

Please tell Dr. Shelby thanks for taking a stand and protecting Americans.

At a minimum, he needs to take a public speaking course and a course on sensitivity. Have a good day.

Regards,

Badri B. Radhakrishnan
