

# Mobile REMM for Windows Mobile - README

Version 1.0

This README will be available in the MREMM group of your PC's start menu when the installation completes.

## **Contents**

- System Requirements
- Installation
  - Quick-Start Instructions
  - Detailed Instructions
  - Upgrade Instructions
  - Resolving Installation Errors
- Uninstalling
- Known Issues
- Release History
- MREMM Overview
- Disclaimer

## **System Requirements**

To install and run MREMM you need the following:

- A Windows Mobile "Pocket PC" (touch screen) device or Smartphone.
- Pocket PC 2003 (version 4.x) or later devices are supported (includes Windows Mobile 2003 and Windows Mobile 5.0)
- Approximately 630KB of storage space, either on the device or on an expansion card, for MREMM
- Internet Explorer mobile (formerly Pocket Internet Explorer) must be present on the device.
- A personal computer with the following installed software:
  - Device synchronization software. On Windows XP, Microsoft ActiveSync 4 or later is required. On Windows Vista, the required Windows Mobile Device Center is part of Vista, but it must be upgraded to version 6 or later. For the latest versions of either, go to <http://www.microsoft.com/windowsmobile/activesync/default.mspx>.

To determine the version of the device's operating system, select Start→Settings, select the System tab, and then select About.

To determine the amount of memory on your device, from the same System tab, select Memory, and then the Main tab. If your device has an expansion card, you can go to the Storage Card tab to determine its free space.

## **Installation**

If a previous version of MREMM is already installed, see the "*Upgrade Instructions*" section

below.

The MREMM installation consists of two parts: installation to your desktop/laptop PC (documentation and files required by ActiveSync), and installation to your Windows Mobile device. After the PC portion of the installation, your device synchronization software will download MREMM to your Windows Mobile device and launch its installation. If your device is not in its cradle, then the MREMM installation will continue the next time your device is cradled.

## Quick-Start Instructions

1. Cradle your device.
2. Download the setup program (MREMM\_WinMobile\_Setup.exe) to your PC and run it.
3. The PC files, including this README will be installed.
4. The Windows Mobile setup program will start and install MREMM for Windows Mobile onto your device.
5. Select the default location on the device, or select an alternative location (e.g., a storage card).
6. Upon completion of the installation, run MREMM by selecting the MREMM icon at Start→Programs.

## Detailed Instructions

1. Download to your PC the MREMM\_PocketPC\_Setup.msi setup program from the REMM website and run it (double-click it). This installs the MREMM documentation to your PC, as well as the files that Microsoft ActiveSync requires for installation to the device. By default, these files are located under the folder "C:\Program Files\MREMM\PocketPC", and consist of:

```
C:\Program Files
    \MREMM
        \PocketPC
            README.rtf (this file)
            Disclaimer.txt
        \DeviceInstallerFiles (files downloaded to the device during
synchronization)
```

2. When the desktop installation completes, the Windows Mobile installation is launched. This will install MREMM for Windows Mobile application.

The remaining details of the installation depend on whether you have a Windows Mobile 5.0 or Pocket PC 2003 device.

Regardless, upon completion of the installation, run MREMM by selecting the MREMM icon at Start→Programs.

### Windows Mobile 5.0

After completion of the PC portion of the installation, respond to any prompts presented on you Windows Mobile device:

1. If your device has a storage card, you will be prompted on the device to choose a location (Device or Card) to install MREMM for Windows Mobile – note that optimum

performance will be realized by installing to the device

2. An unknown publisher warning for the “MREMM for Windows Mobile.CAB” may be presented. Answer “Yes”.
3. You may be prompted to restart the device.

MREMM is installed under the folder “\Program Files\MREMM” on either the device or storage card, depending on what was selected for the destination.

### **Pocket PC 2003**

1. A dialog will appear on your PC with the message *“Install MREMM and other pending applications using the default application install directory?”*. By default, the MREMM application files will be installed in your device’s main memory at “\Program Files\MREMM”. If space on your device is limited, you may need to consider placing MREMM on an expansion card instead, if your device is so equipped. Note that optimum performance will be realized by installing to main memory.
  - a. Answer “Yes” to continue installation to the default location if your device meets the memory requirements, OR
  - b. Answer “No”. A “Select Destination Media” dialog is presented with a list of options. The default option will be “Main Memory”, and an indication of the amount of required and available space will be provided. If your device has an expansion card, it will be included as an option in this list, typically as “Storage Card”. Select the desired option and then press OK. On a storage card, MREMM is installed under a folder “\MREMM for Windows Mobile”
2. The Windows Mobile installer will proceed to download MREMM to your device.
3. At completion of the download, an “Application Downloading Complete” dialog will be displayed on your PC and present the following message: “Please check your device for any additional operations that must be performed on the device to complete installation.” This is an indication that your device may be presenting additional dialogs to complete the installation.

### **Upgrade Instructions**

An upgrade is performed the same as a normal installation, but with the following considerations.

1. Windows Mobile 5.0 devices: For MREMM for Windows Mobile, a dialog will be present indicating that the previous version will be removed before the new one is installed. Select “OK”.
2. Pocket PC 2003 devices: If there is not enough space on the device, this will be indicated on the Select Destination Media dialog by the Space Available and Space Required values. Press OK, and a “Not Enough Space on Device dialog” will be presented. Select OK to indicate that you want to continue anyway. The calculation of available space does not, unfortunately, account for the fact that the previous version of MREMM will be removed, and thus that space is available. Therefore, continuation of the installation should be okay.
3. As with a normal install, if the device displays prompts asking if files should be overwritten, answer “Yes to All”.

### **Resolving Installation Errors**

Initial release.

## ***Uninstalling***

### **Desktop Uninstall**

The desktop portion of the MREMM installation can be uninstalled from your PC via the Control Panel's Add/Remove Programs option.

### **Windows Mobile Uninstall**

There are two ways to uninstall MREMM from your Windows Mobile:

1. On the device, go to Start→Settings→System→Remove Programs. Select MREMM from the list of programs, and then select Remove.
2. If your device is cradled with an ActiveSync connection, open ActiveSync and select Tools→Add/Remove Programs. A dialog listing the applications on your device is displayed. Find MREMM and clear the checkbox.

### ***Known Issues***

Initial release.

### ***Release History***

Application v1.0.: initial public release

### ***REMM Overview***

- REMM is a tool that helps in diagnosis and treatment of victims of mass casualty radiological/nuclear events
- Mobile REMM has only selected pages from REMM Web site - <http://remm.nlm.gov>
- See REMM Web site for much more data, images, and background material
- See REMM Web site for key "printable pages" to carry in your pocket
- See REMM downloadable version for access without the internet

MREMM currently exists as a standalone application for

- Windows Mobile PDAs (Pocket PC and Smartphone)
- Palm OS PDAs
- BlackBerry Smartphone.
