<b>All activities</b>	<b>SCSh6.d</b>	Participate in group discussions of scientific investigation and current scientific issues.
<b>2</b>	<b>SCSh7.c</b>	From time to time, major shifts occur in the scientific view of how the world works. More often, however, the changes that take place in the body of scientific knowledge are small modifications of prior knowledge. Major shifts in scientific views typically occur after the observation of a new phenomenon or an insightful interpretation of existing data by an individual or research group.
<b>2, 3, 4</b>	<b>SCSh7.d</b>	Hypotheses often cause scientists to develop new experiments that produce additional data.
<b>2, 3, 4</b>	<b>SCSh7.e</b>	Testing, revising, and occasionally rejecting new and old theories never ends.
<b>2, 3</b>	<b>SCSh9.a</b>	Read technical texts related to various subject areas.

<b>1, 2, 3, 4</b>	<b>SB2.d</b>	Describe the relationships between changes in DNA and potential appearance of new traits including alterations during replication (insertions, deletions, substitutions), and mutagenic factors that can alter DNA (high energy radiation- x-rays and ultraviolet, and chemical.)
<b>2, 3</b>	<b>SAP1.c</b>	Explain the role of homeostasis and its mechanisms as these relate to the body as a whole and predict the consequences of the failure to maintain homeostasis.
