Comments: I urge the ICCVAM to immediately accept internationally validated non-animal tests. I do not understand why Europe is so far ahead of the United States in validating and approving dozens of non-animal test methods while the U.S. has approved only ONE! I also urge the ICCVAM to pay close attention to the new findings that are occurring on almost a daily basis with respect to animal feelings and emotions. In good conscience we can no longer condone the testing of feeling, thinking beings when alternatives are out there waiting to be implemented. I strongly urge the ICCVAM to move quickly on validation of non-animal testing methods.

I thank you for your attention.
