

11/11/2001

Dr. Stokes,

We have the benefit now of alternatives to the archaic and unsavory use of animals in toxicology. Vivisection has always been scientifically unsound, and morally bankrupt, and there has never been a better time for its abolition than now. Certain inventions, such as the LD-50, are particularly insane, and have been allowed to perpetuate for very human reasons having nothing to do with science. Let's correct old wrongs.

Billy Leonard
