attention dr william s stokes - dhs national
toxicology program - alternative toxic methods in
vitro ocular method

i very much oppose using real animal eyes for this
test and believe that if any eyes are tested, human
eyes would be the far better and more accurate eyes
to
be used. since animals have no voices to complain,
testing on them is only visual and certainly
inaccurate as a result. this abuse toward animals
needs to be stopped. this is a method from 1500 a.d
and we have more modern methods of testing toxicity
these days. use them and stop abusing and harming
animals the way you do.
