

Collaborative Opportunities

Opportunities to collaborate on research and development.

Overview

EDRN offers investigators outside of the Network opportunities for collaboration as Associate Members in research efforts related to biomarker development, clinical testing and validation. Non-EDRN investigators can develop informal or formal collaborative research through an EDRN Principal Investigators, or through the EDRN Collaborative Groups and request the use of shared resources such as novel technologies, specimens, high-risk registries, and cohorts through the Network or seek funding for validation studies.
