

AUNTIE POLLUTION

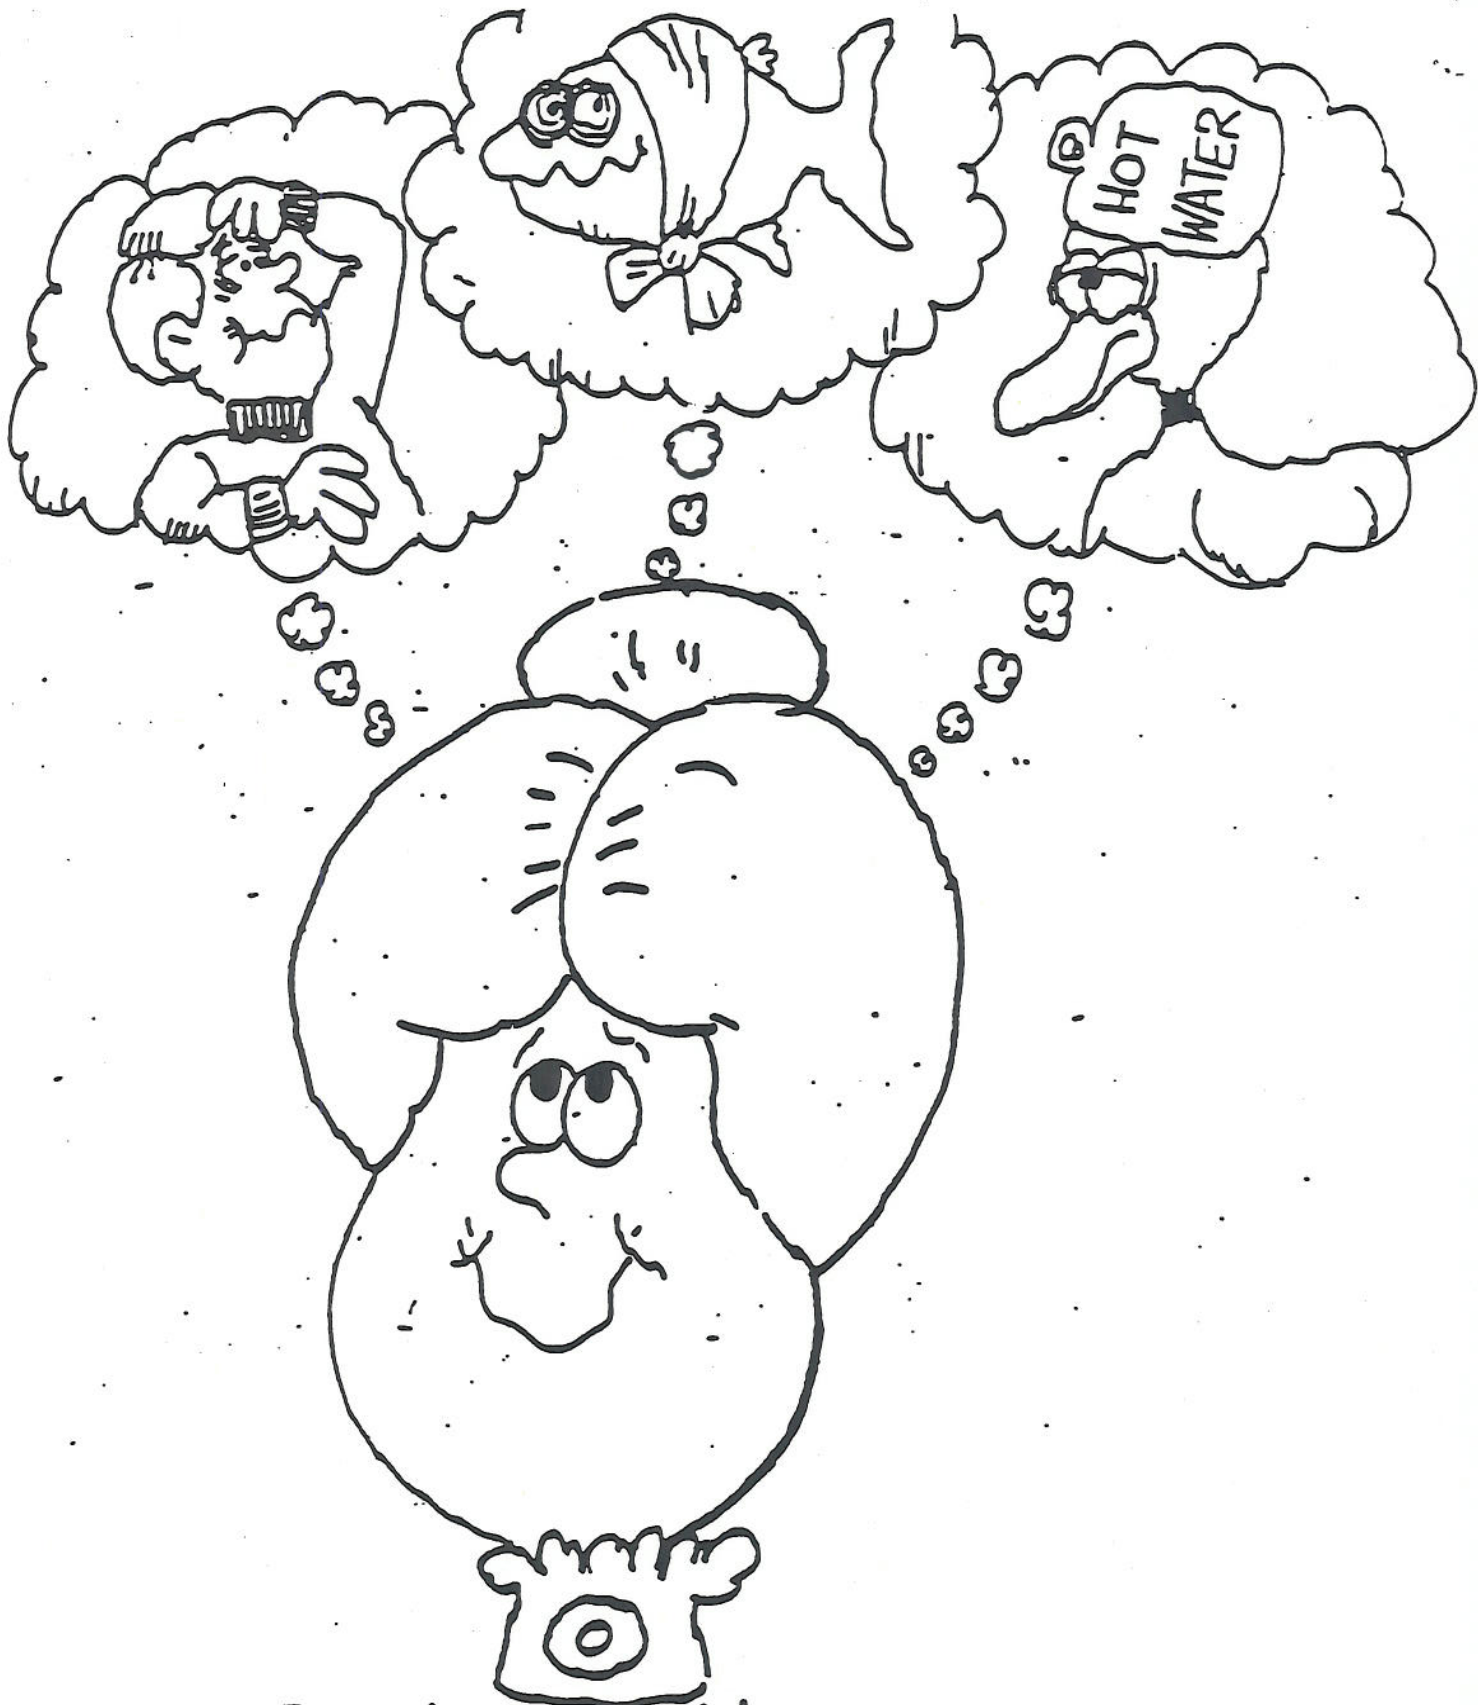

NATIONAL INSTITUTE OF ENVIRONMENTAL HEALTH SCIENCES

Environmental Awareness Advisory Committee

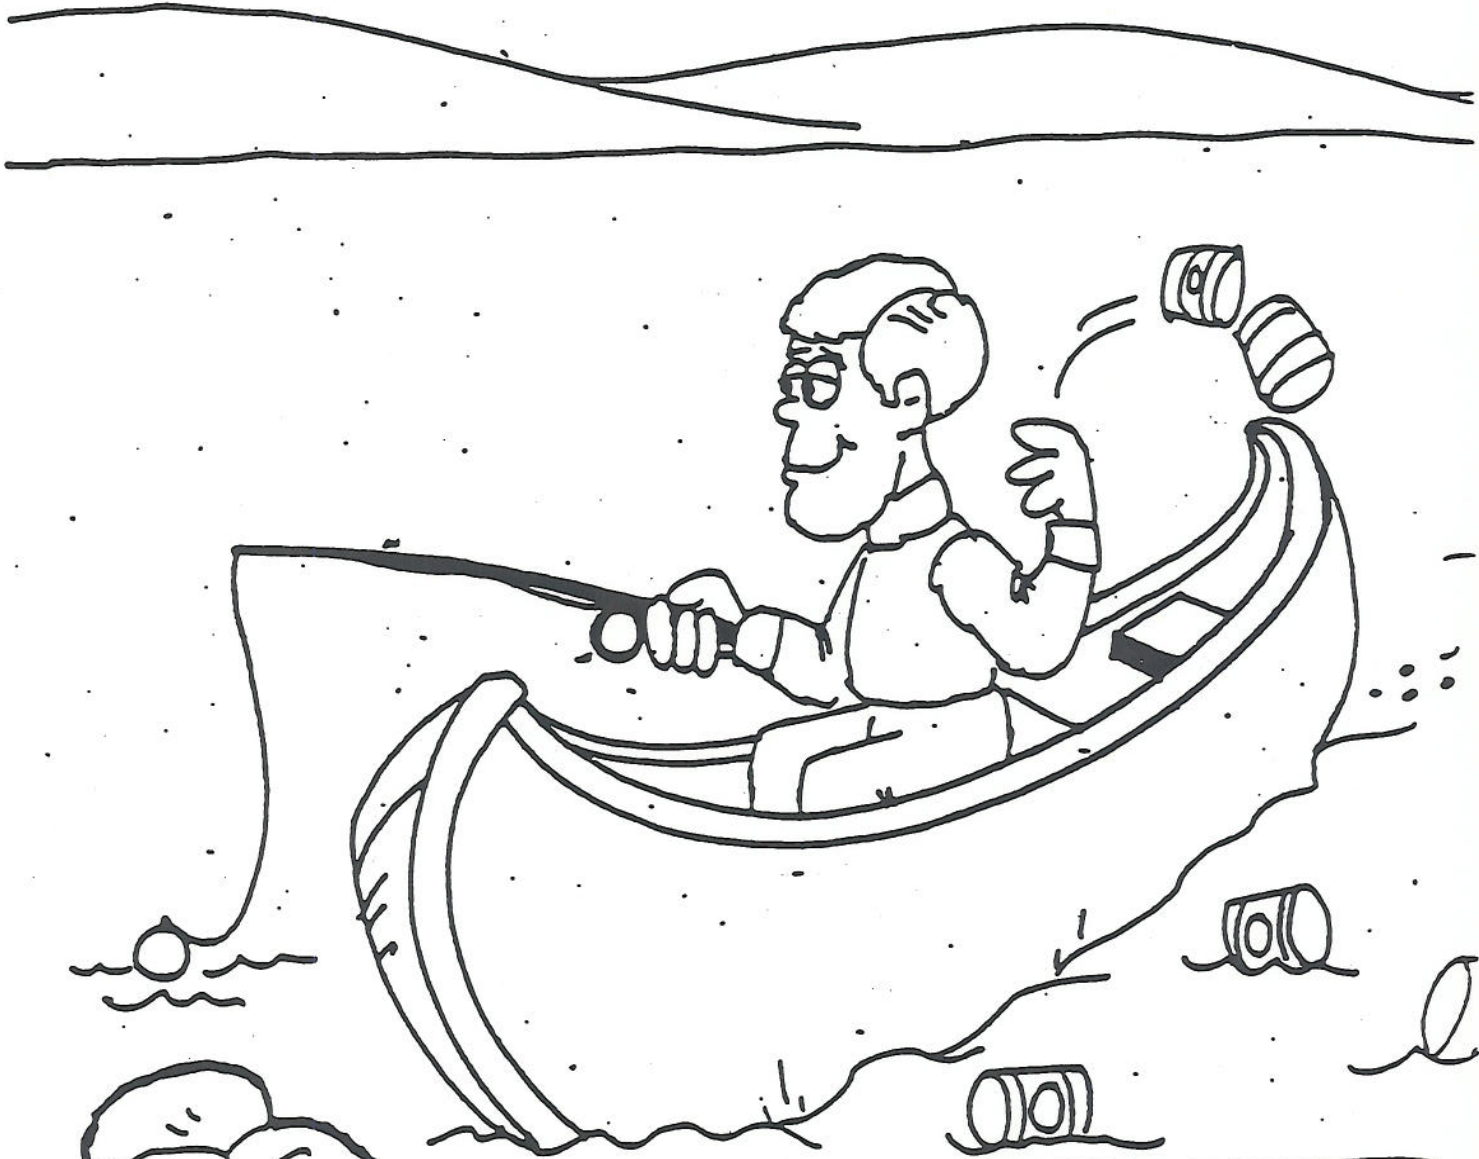

ages: pre-school - grade 3

NIEHS

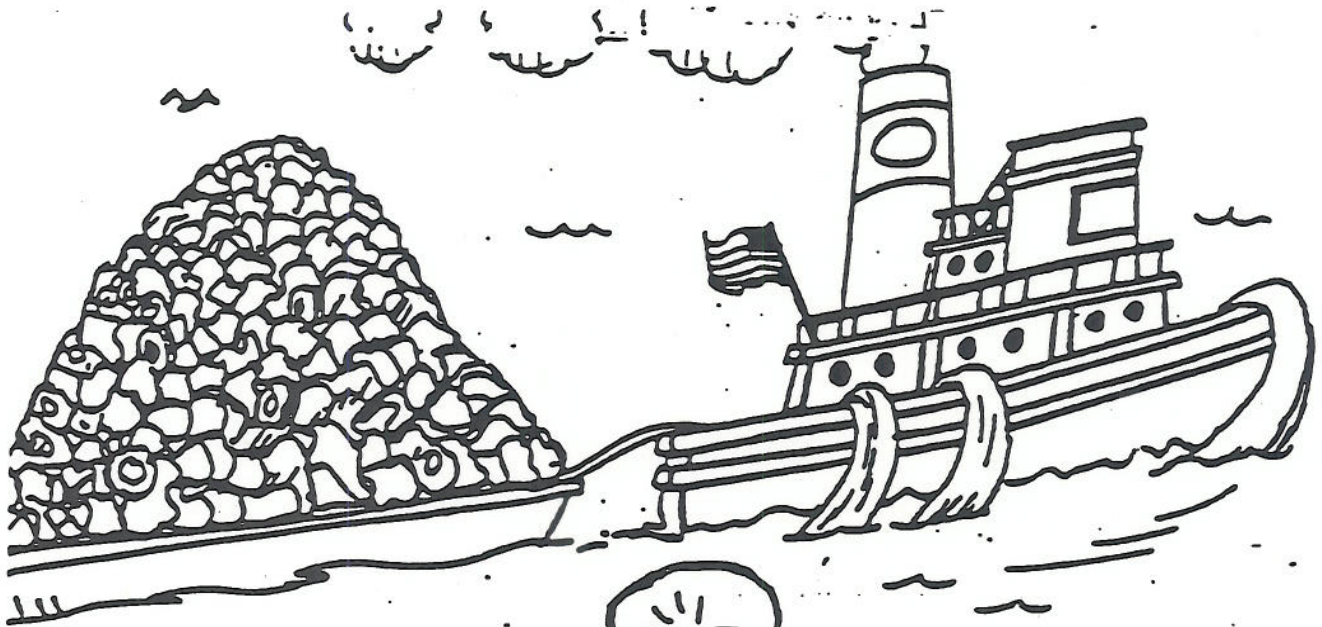

WATER POLLUTION can cause sickness,
and in some cases even death, to fish, water fowl,
and even people.

Just think how many times this is done each day.

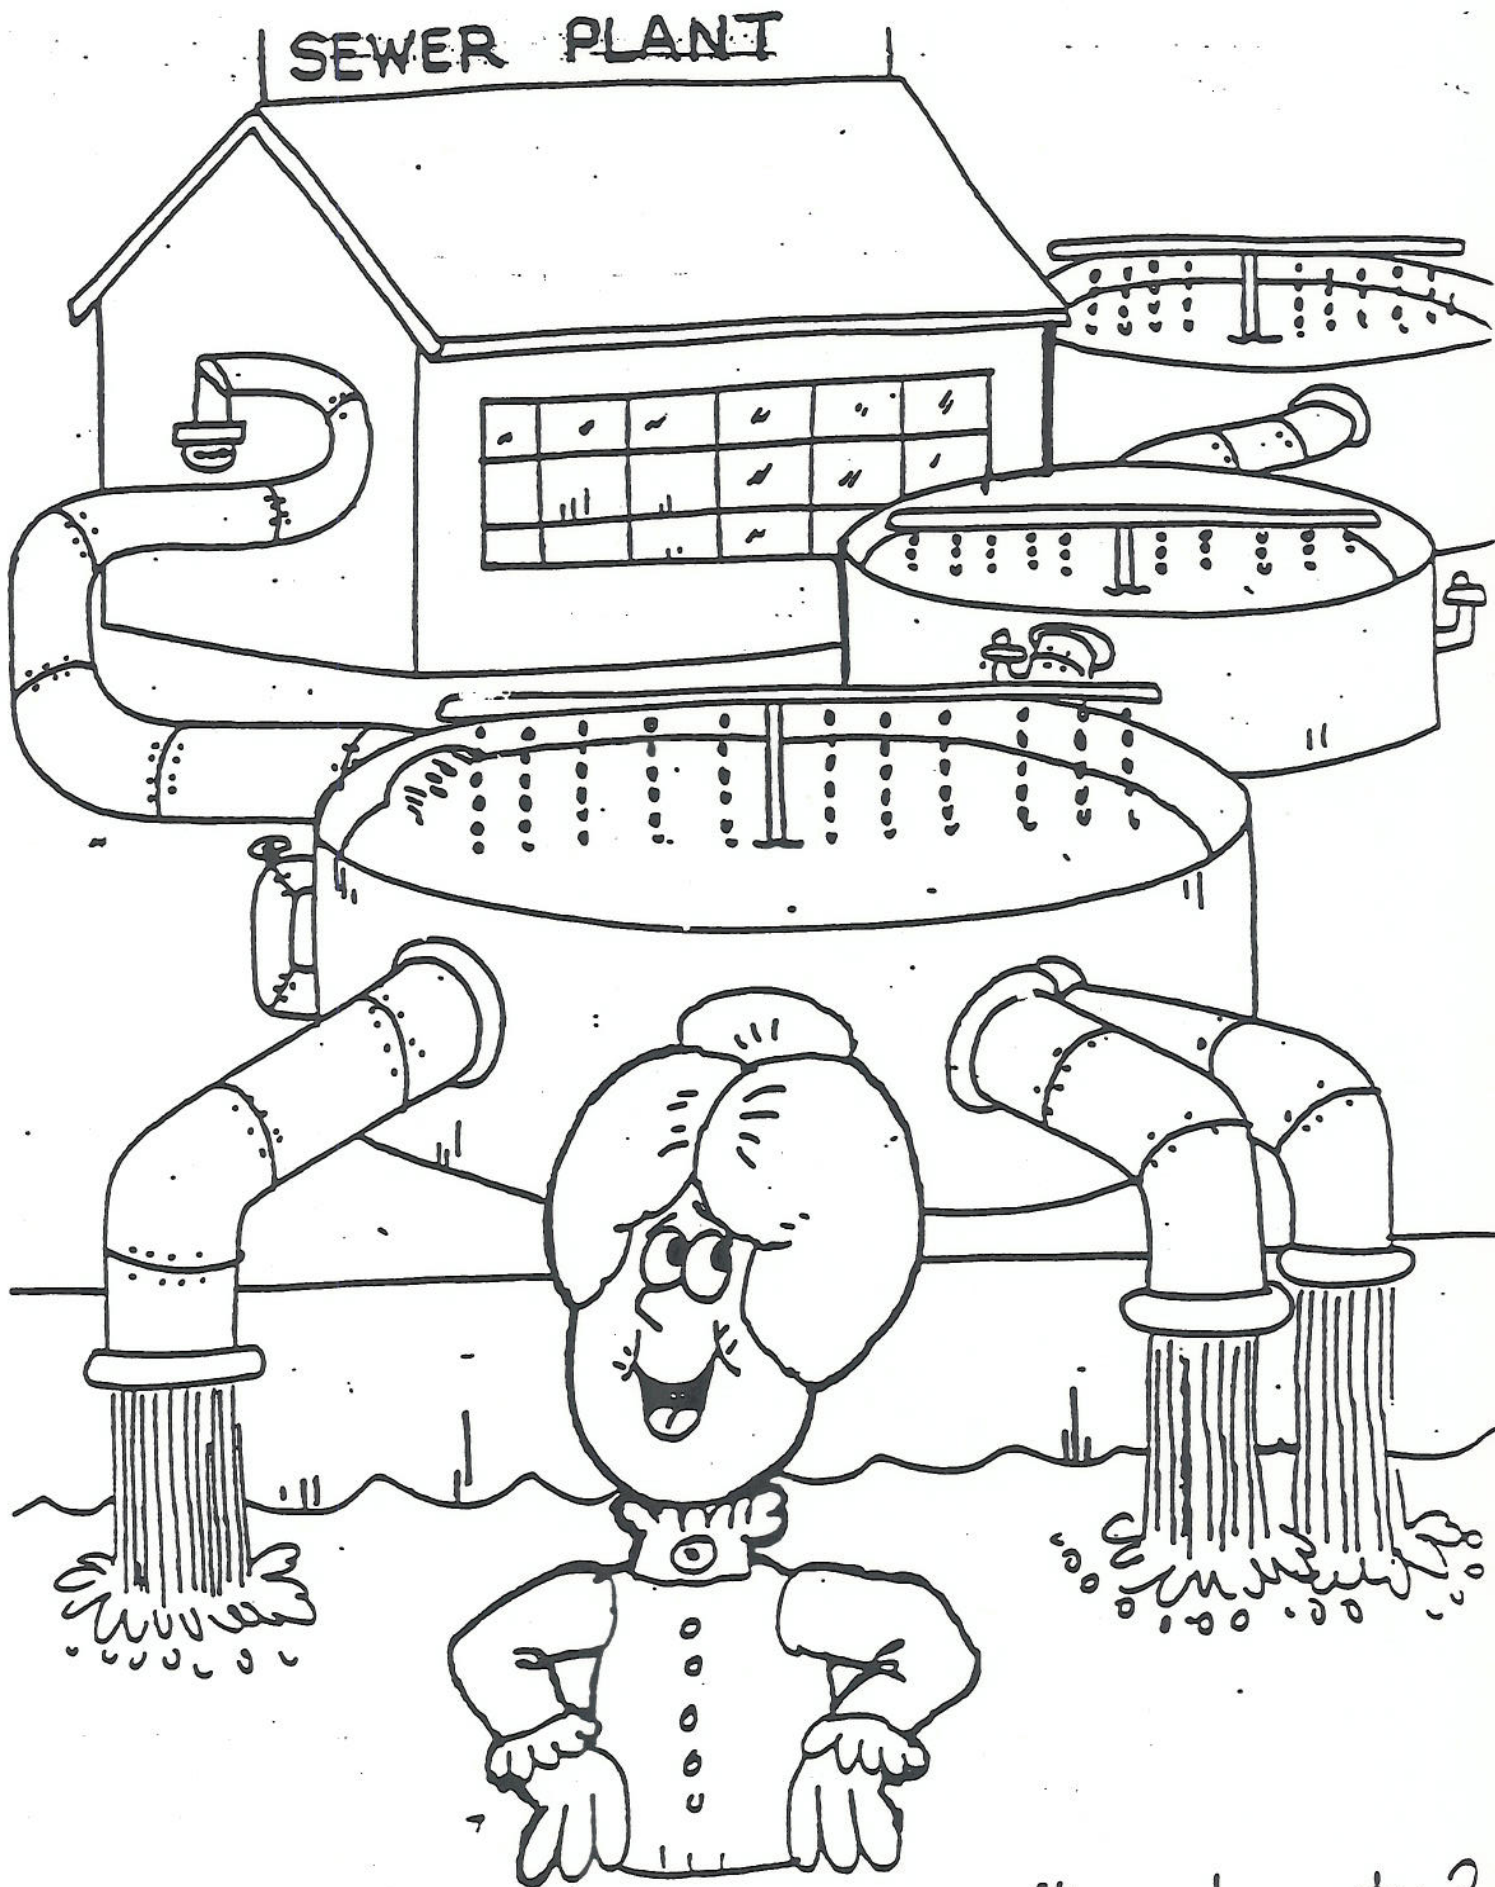

There are many
of these.
Is there one near
YOU?

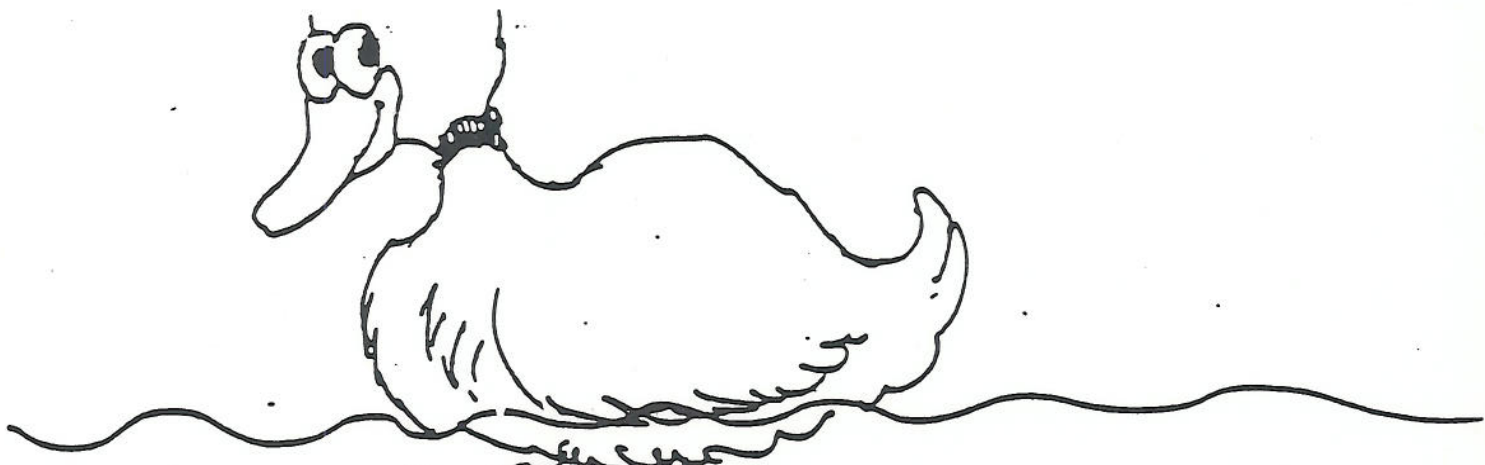

Where do
you
suppose
this
will end up?

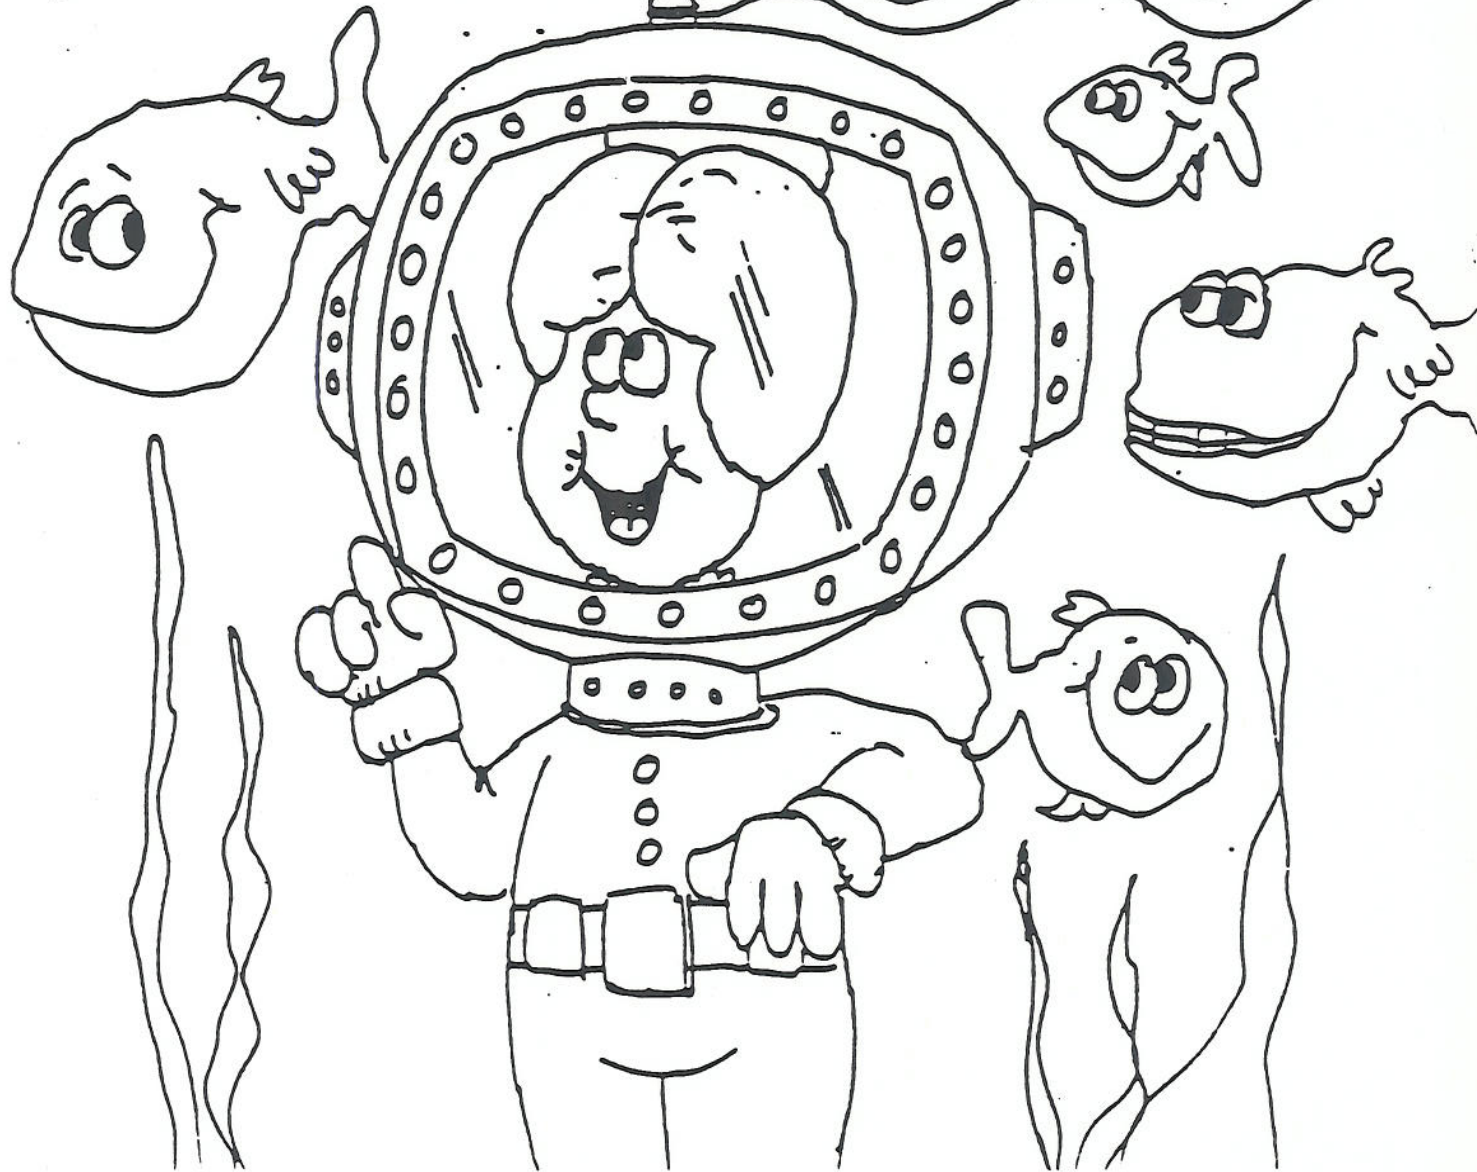

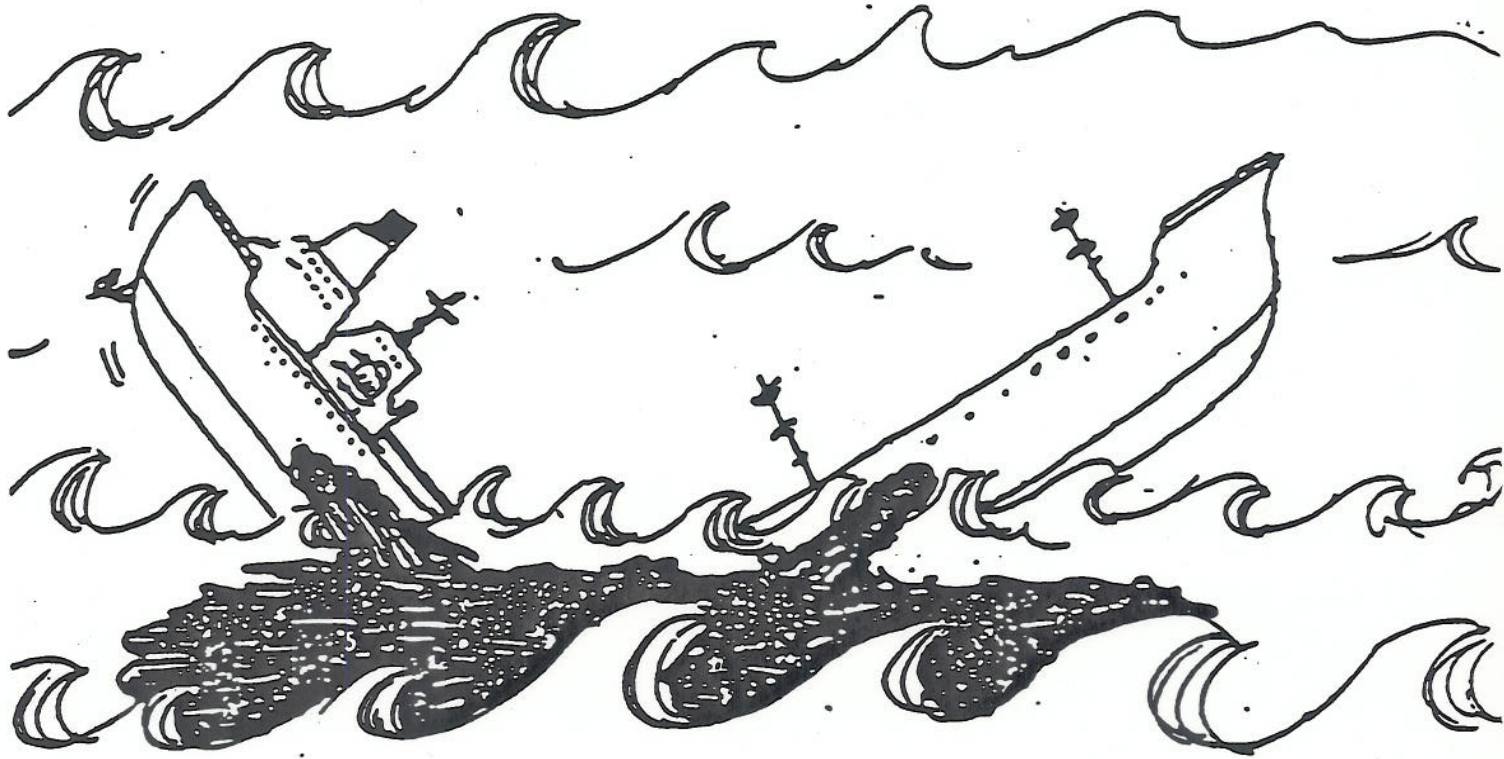

Is the sewer plant in your city adequate?

EVEN OUR FISH AND WATER
FOWL ENJOY CLEAN WATER

Sometimes pollution happens when oil tankers break up at sea..

AVUNTIE LIKES THIS LAKE
(BECAUSE IT'S NICE AND CLEAN)

THIS LAKE IS DIRTY

The next time you visit the beach you
and your friends can help by doing this.

CITY DUMP

A Book to Color

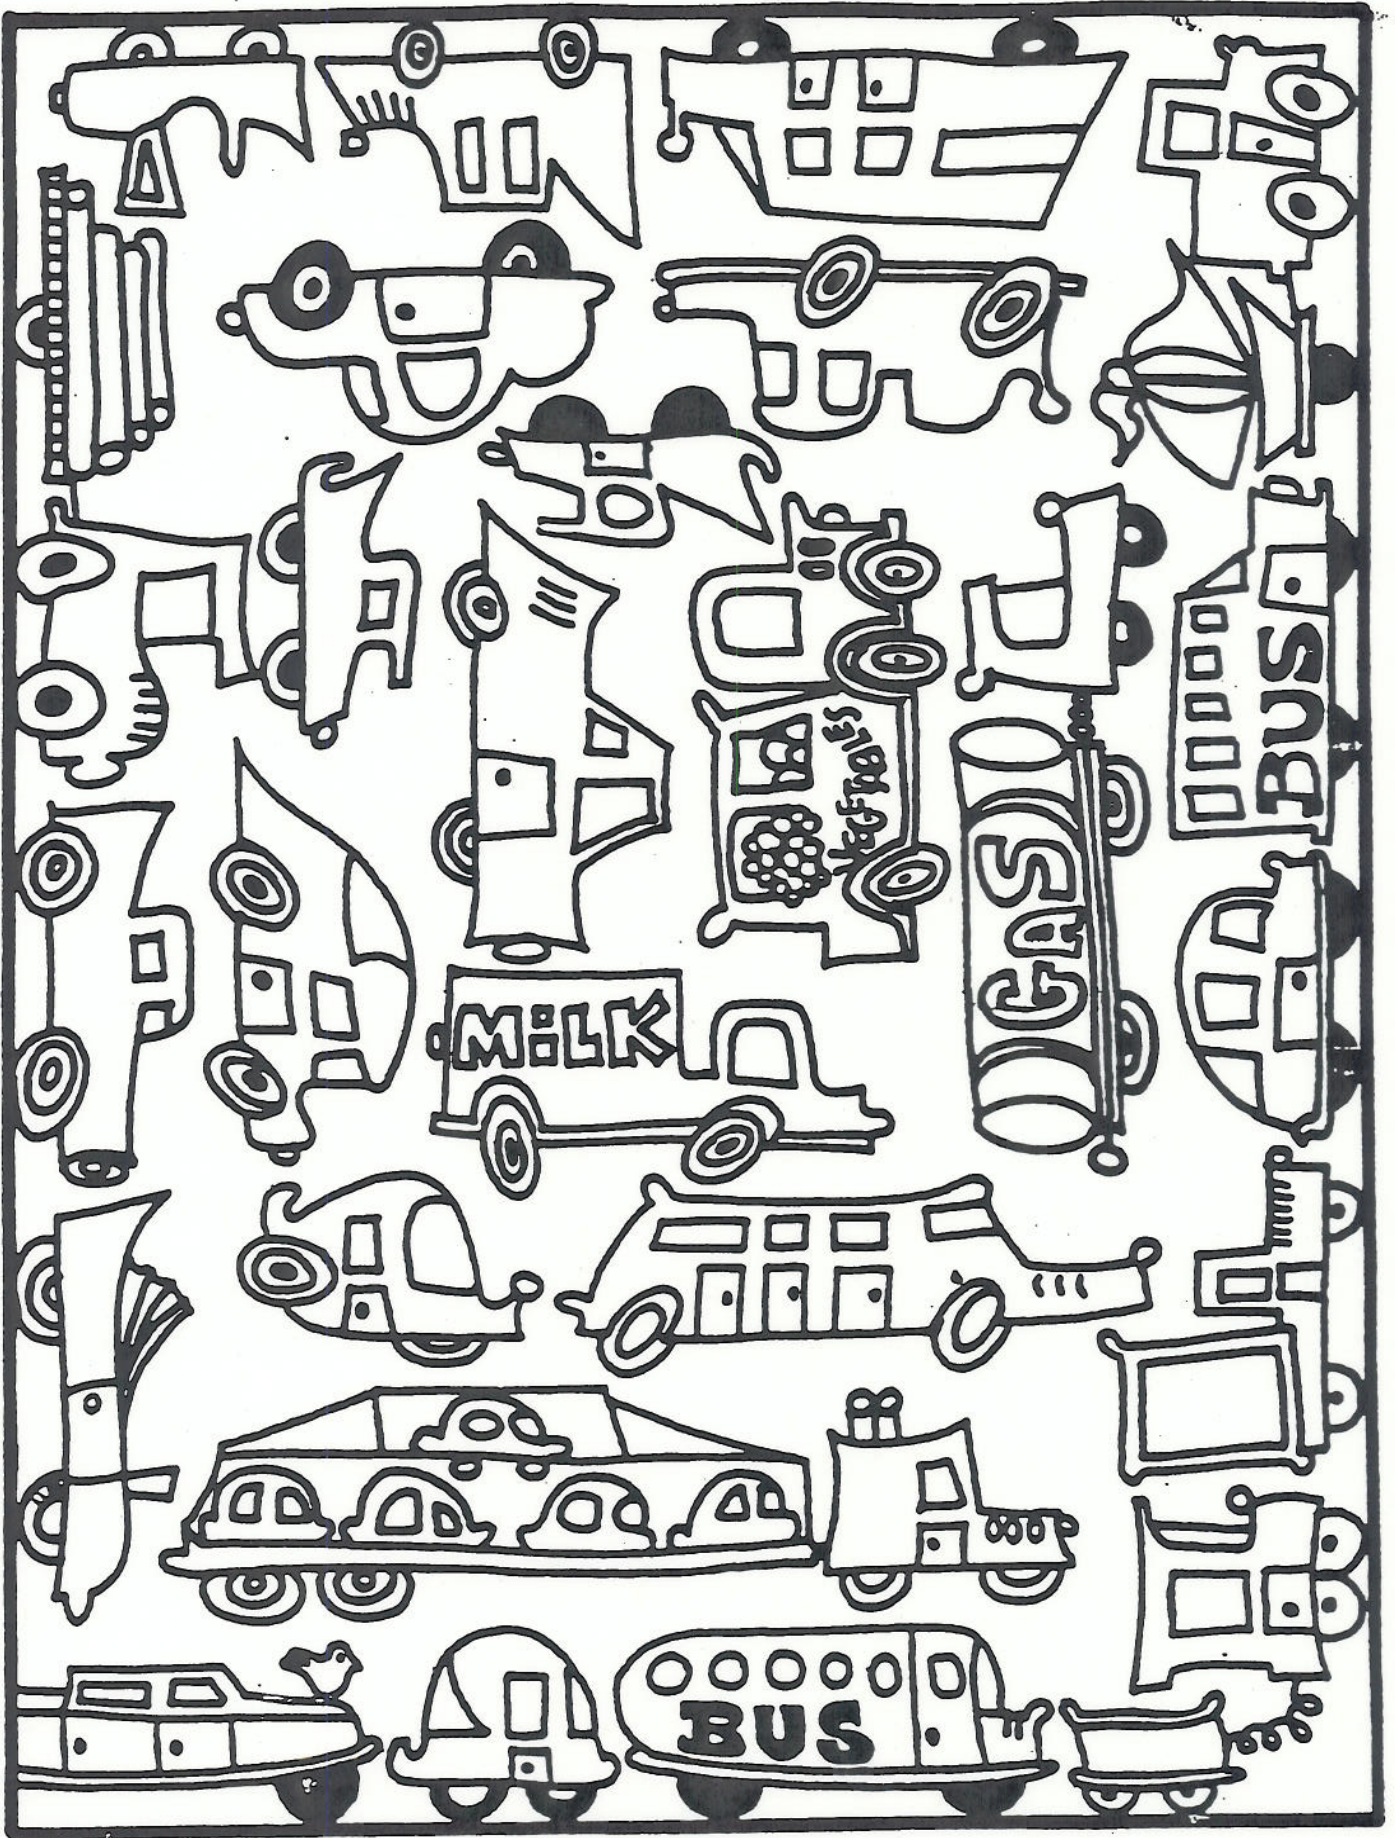

The Earth is home for nearly four billion people.
So many people means that . . .

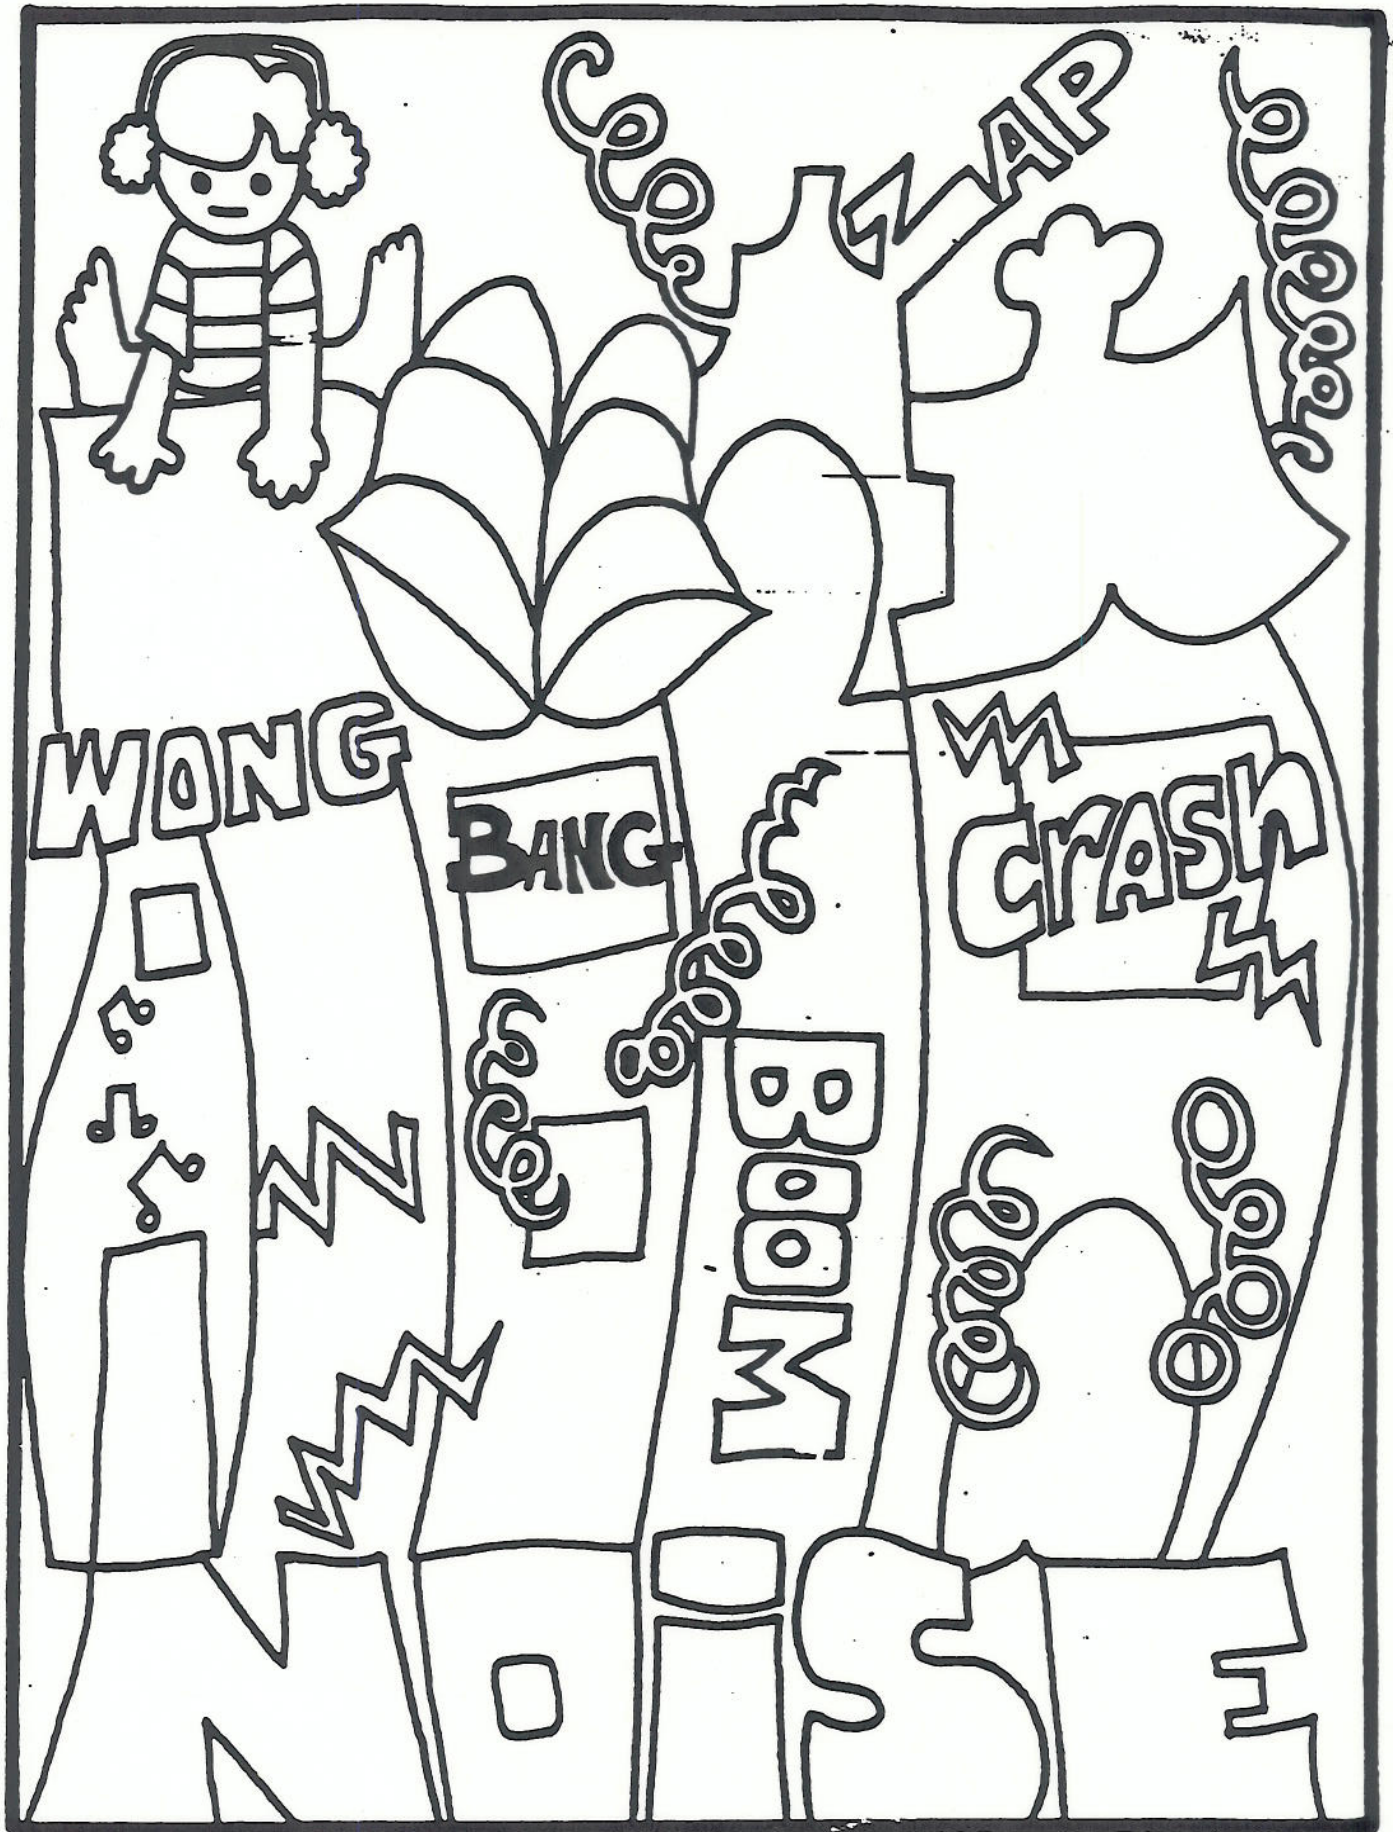

In lots of places houses are crowded together

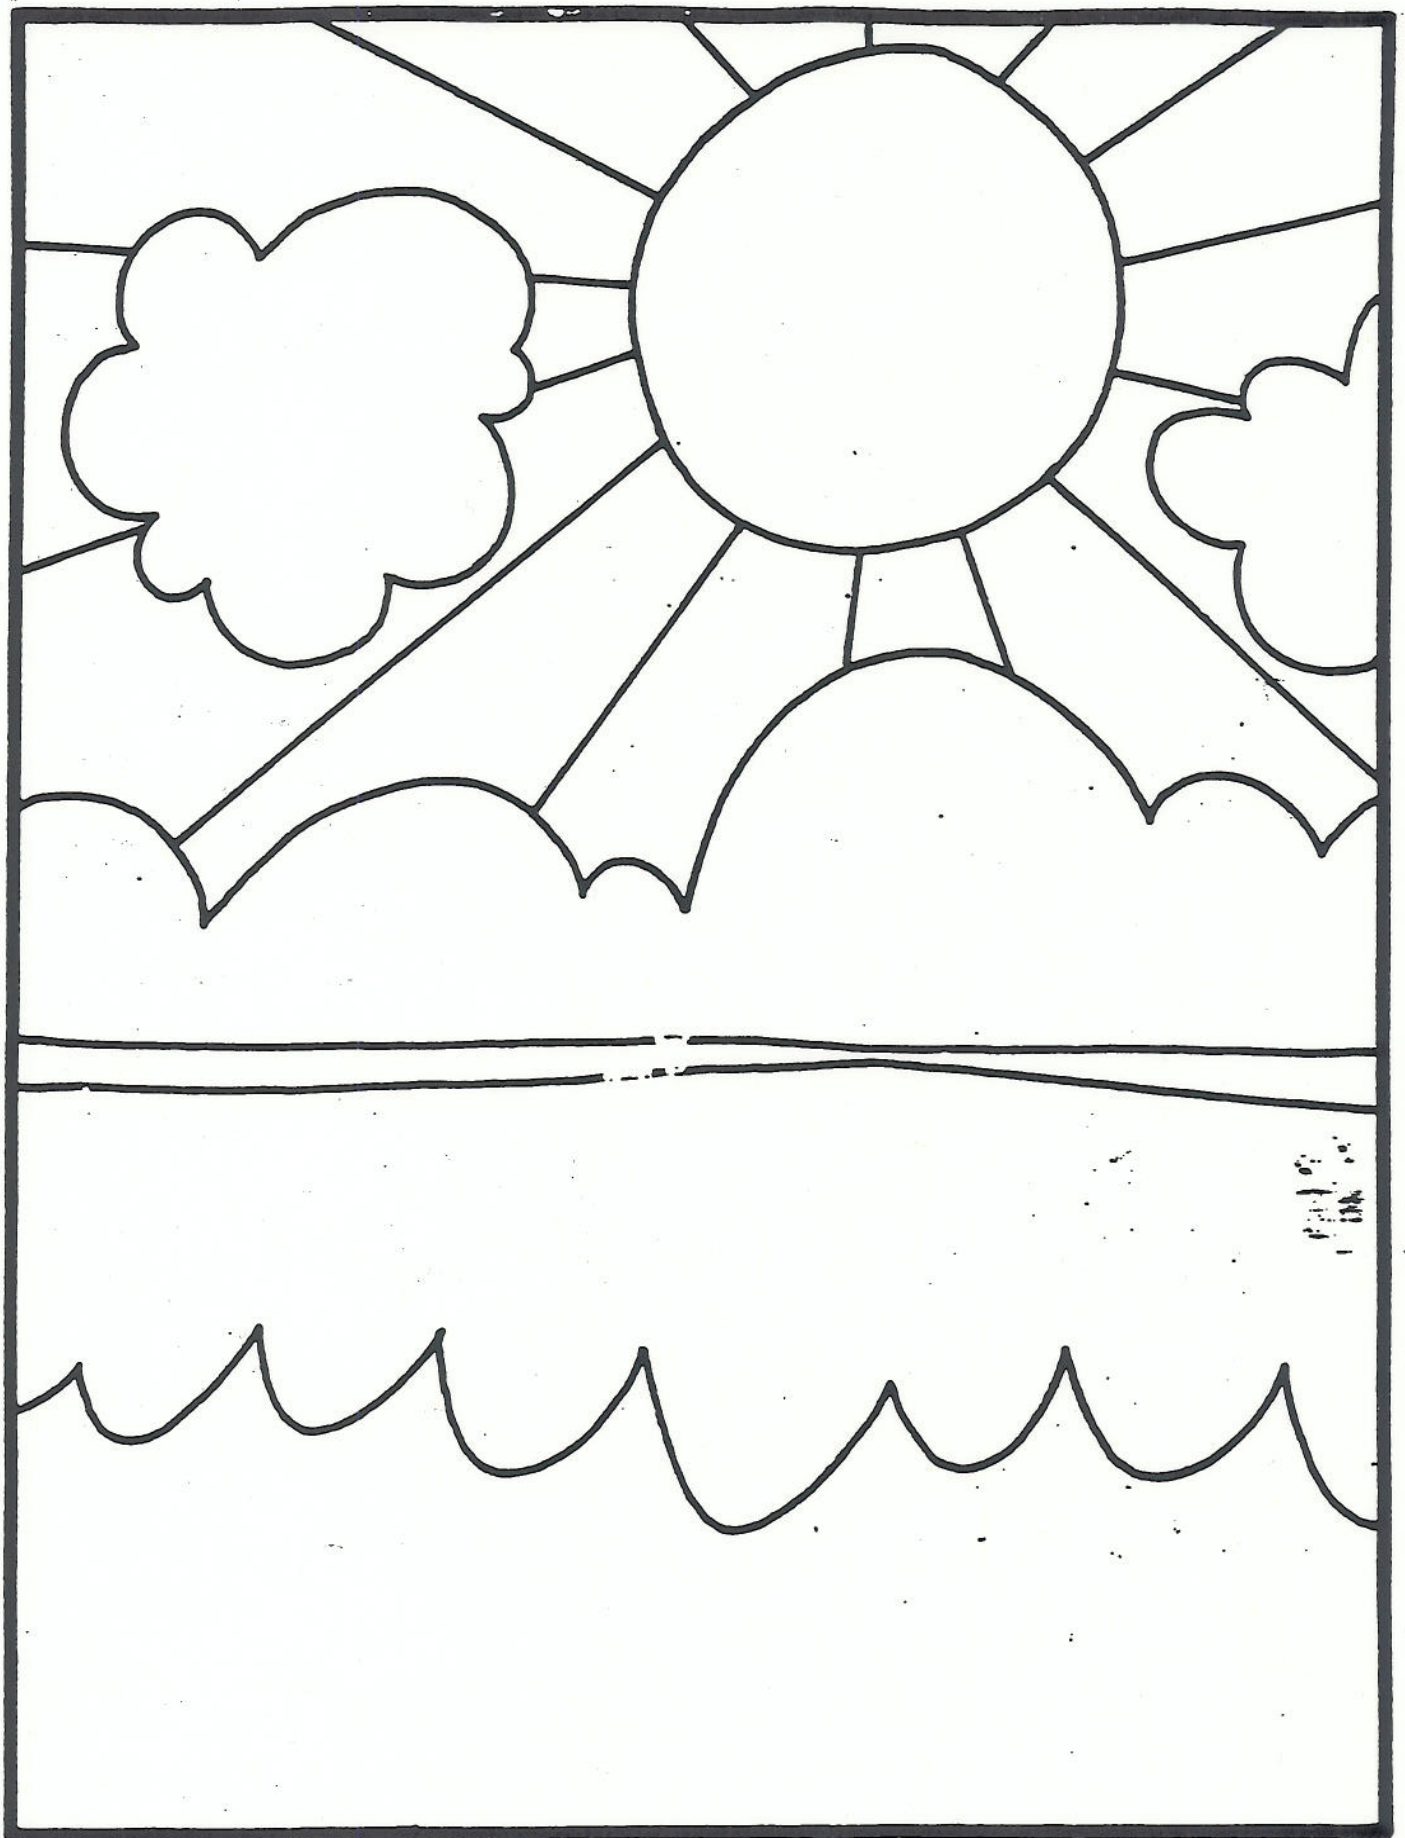

There is still too much dirty air and water . . .

There is too much traffic . . .

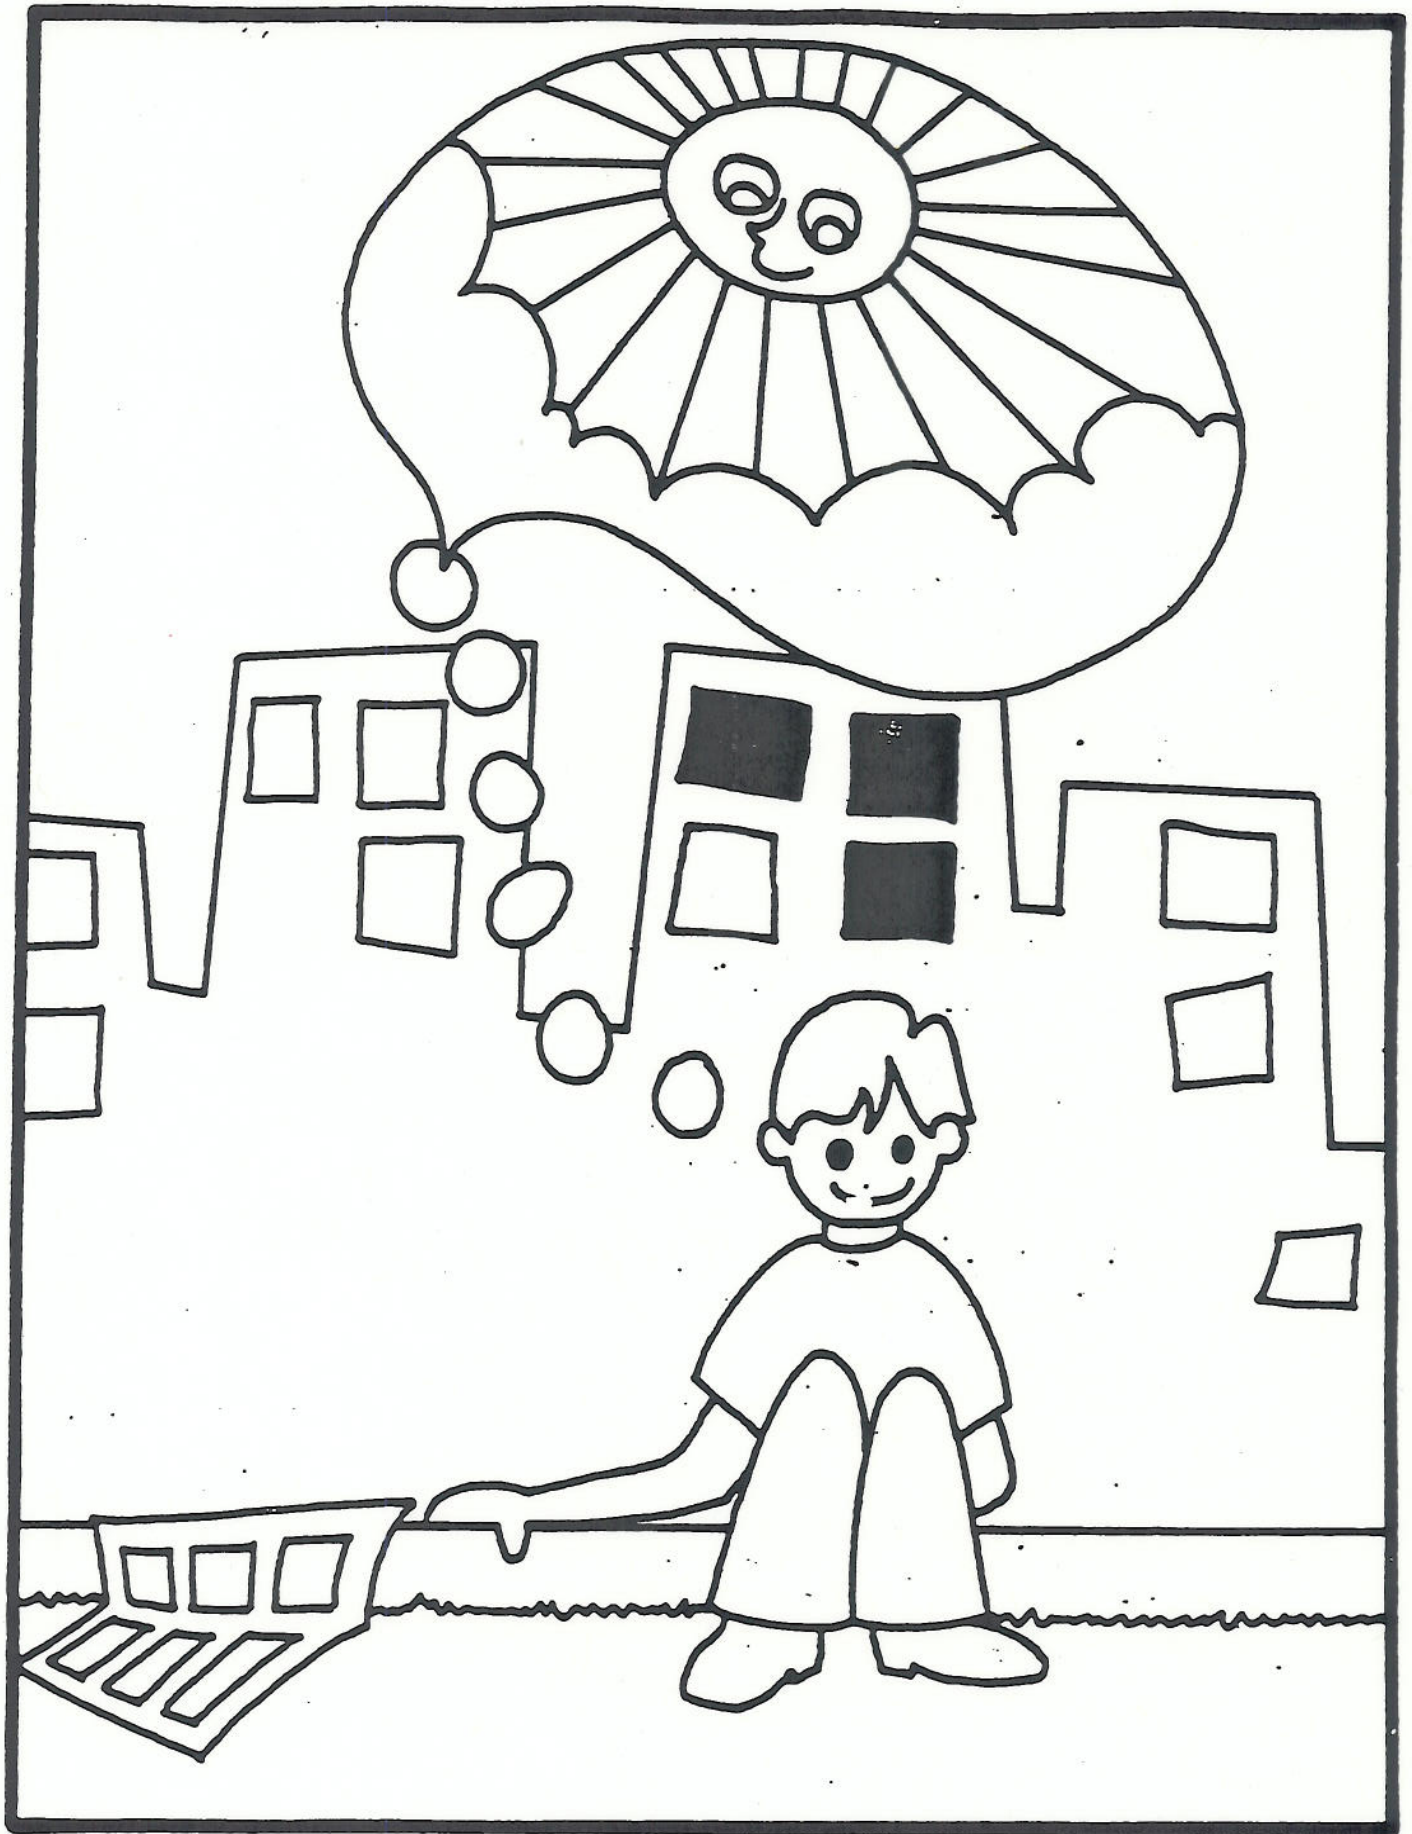

And too much noise.

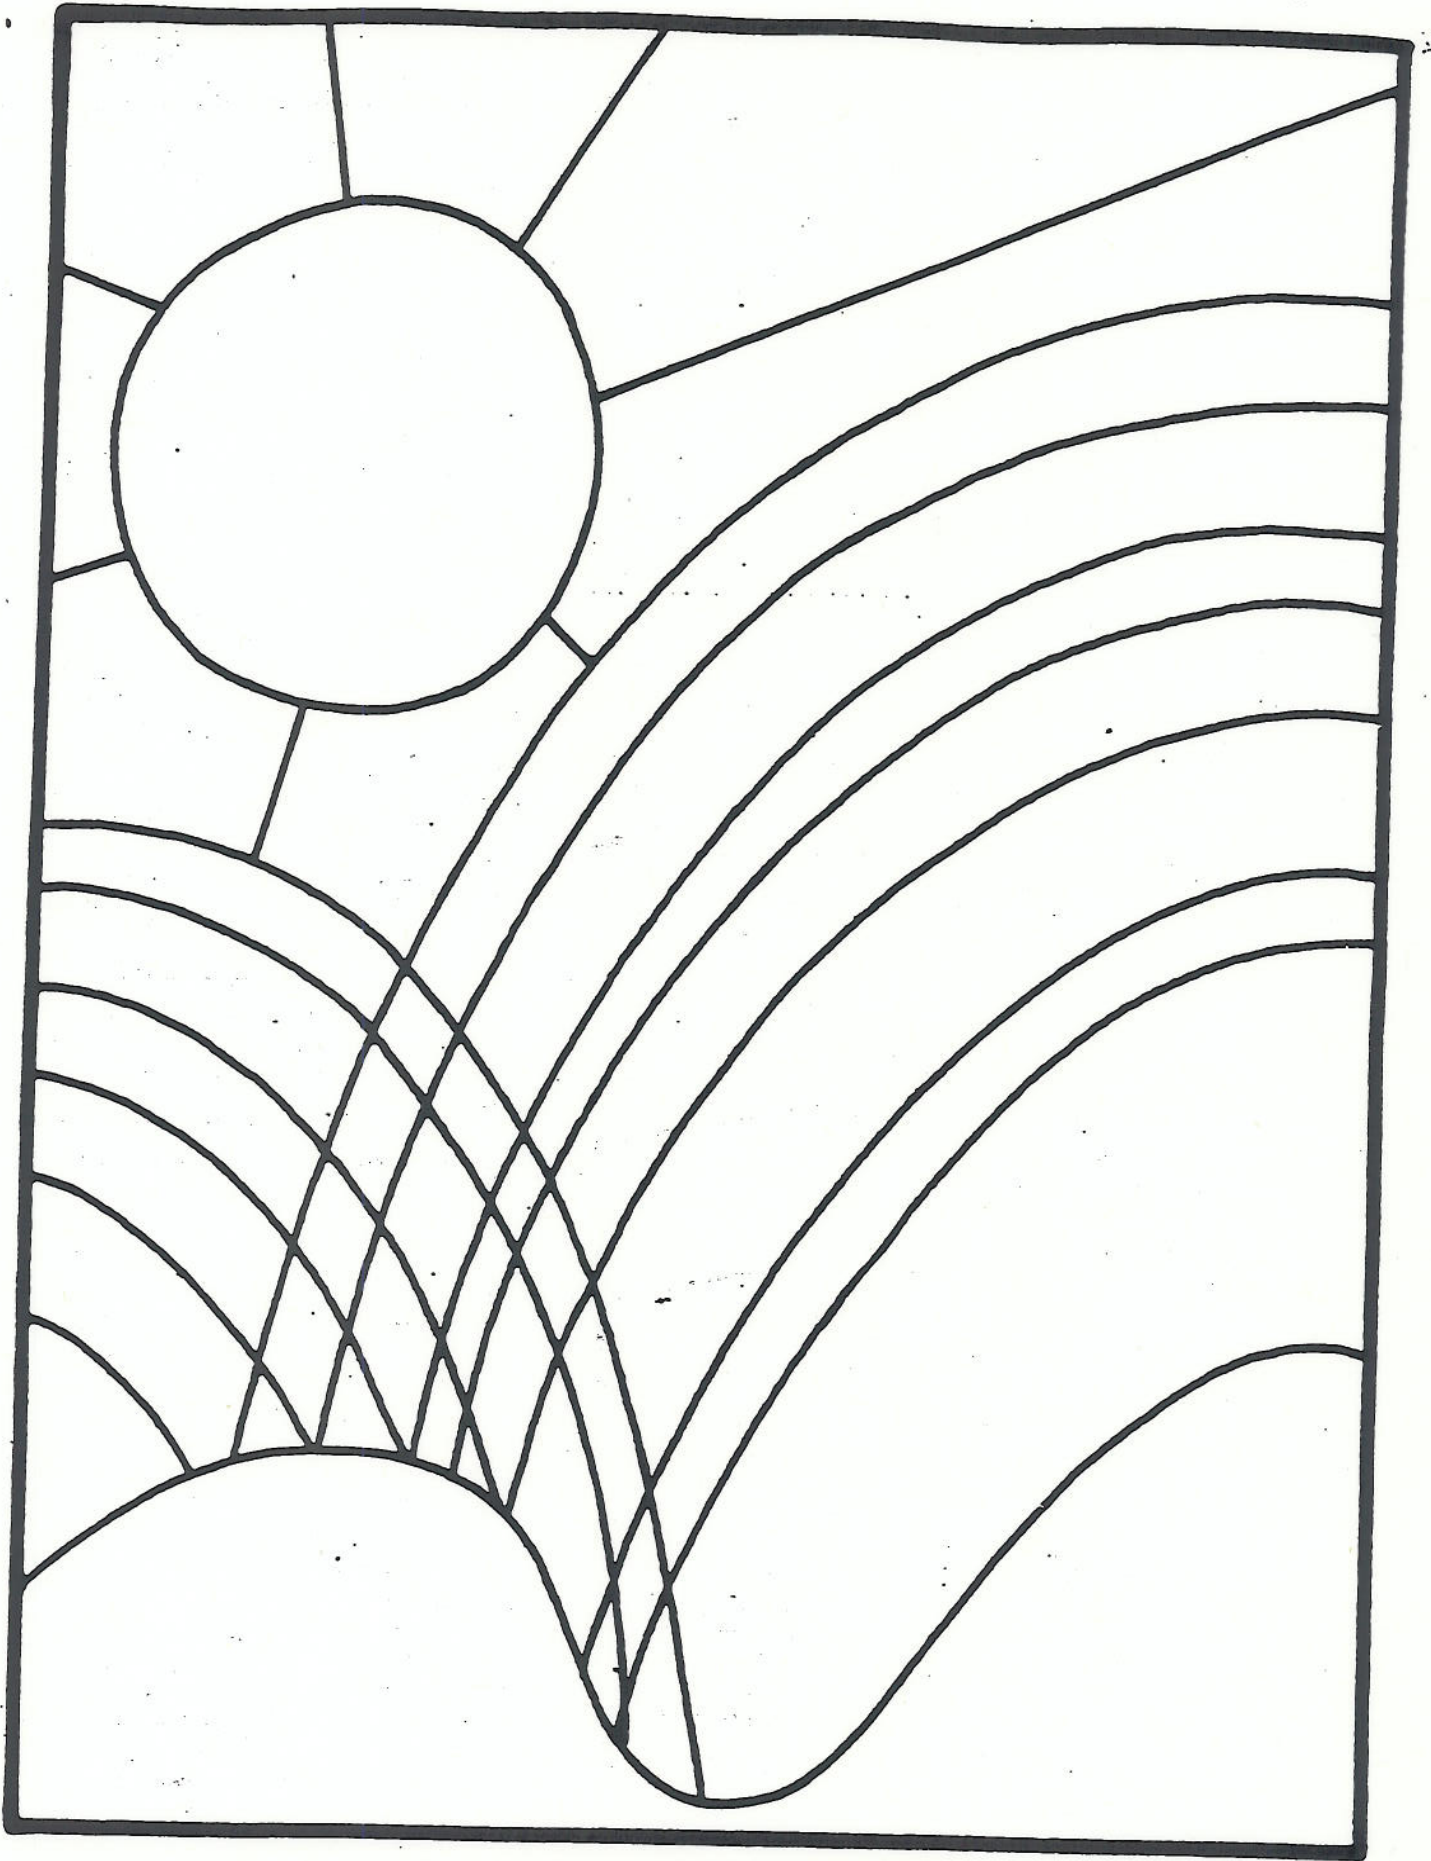

But things are getting better . . .

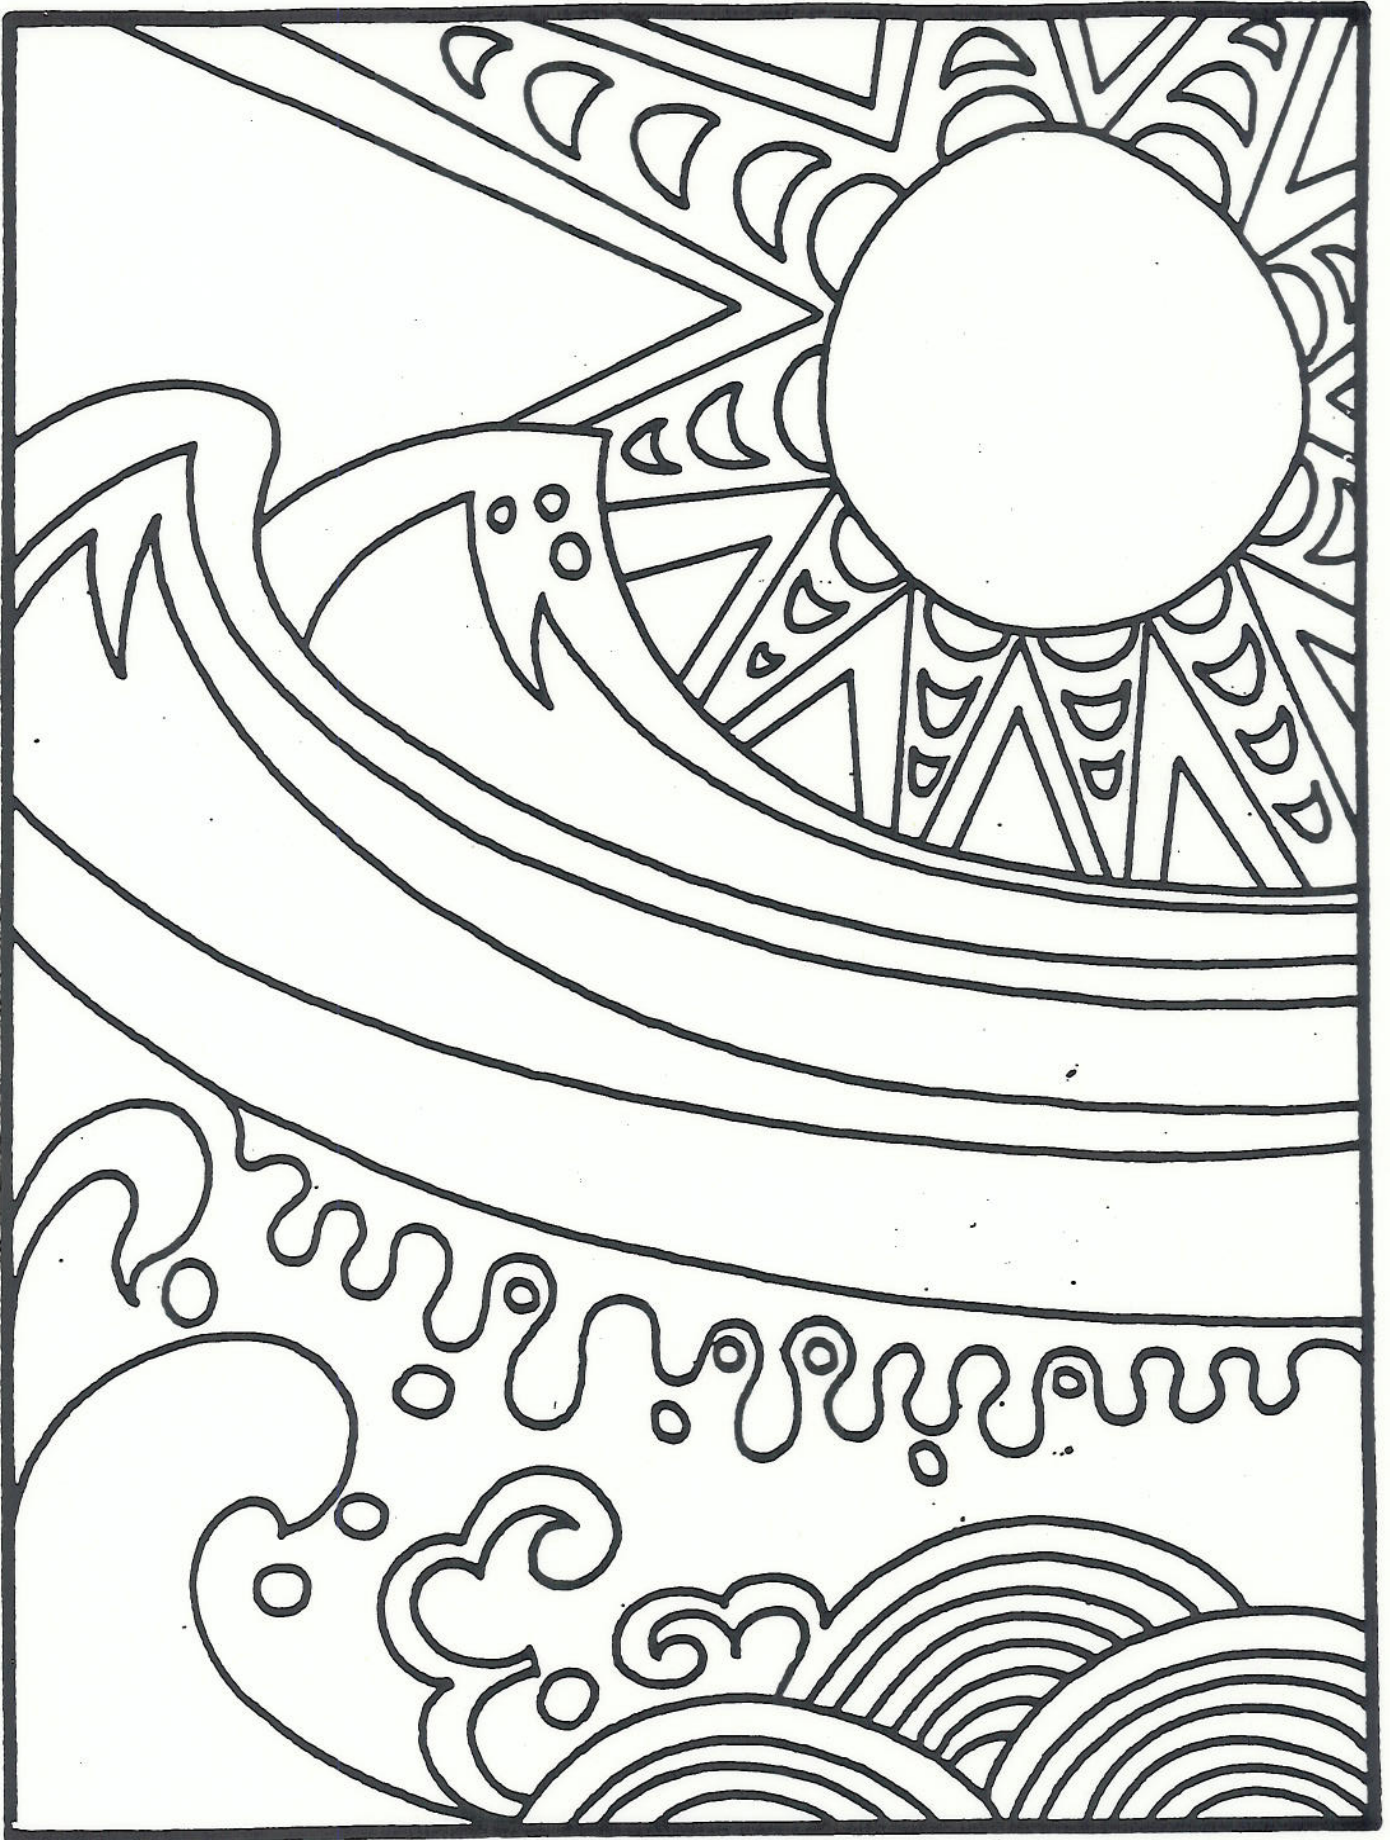

And there are ways we can all help . . .

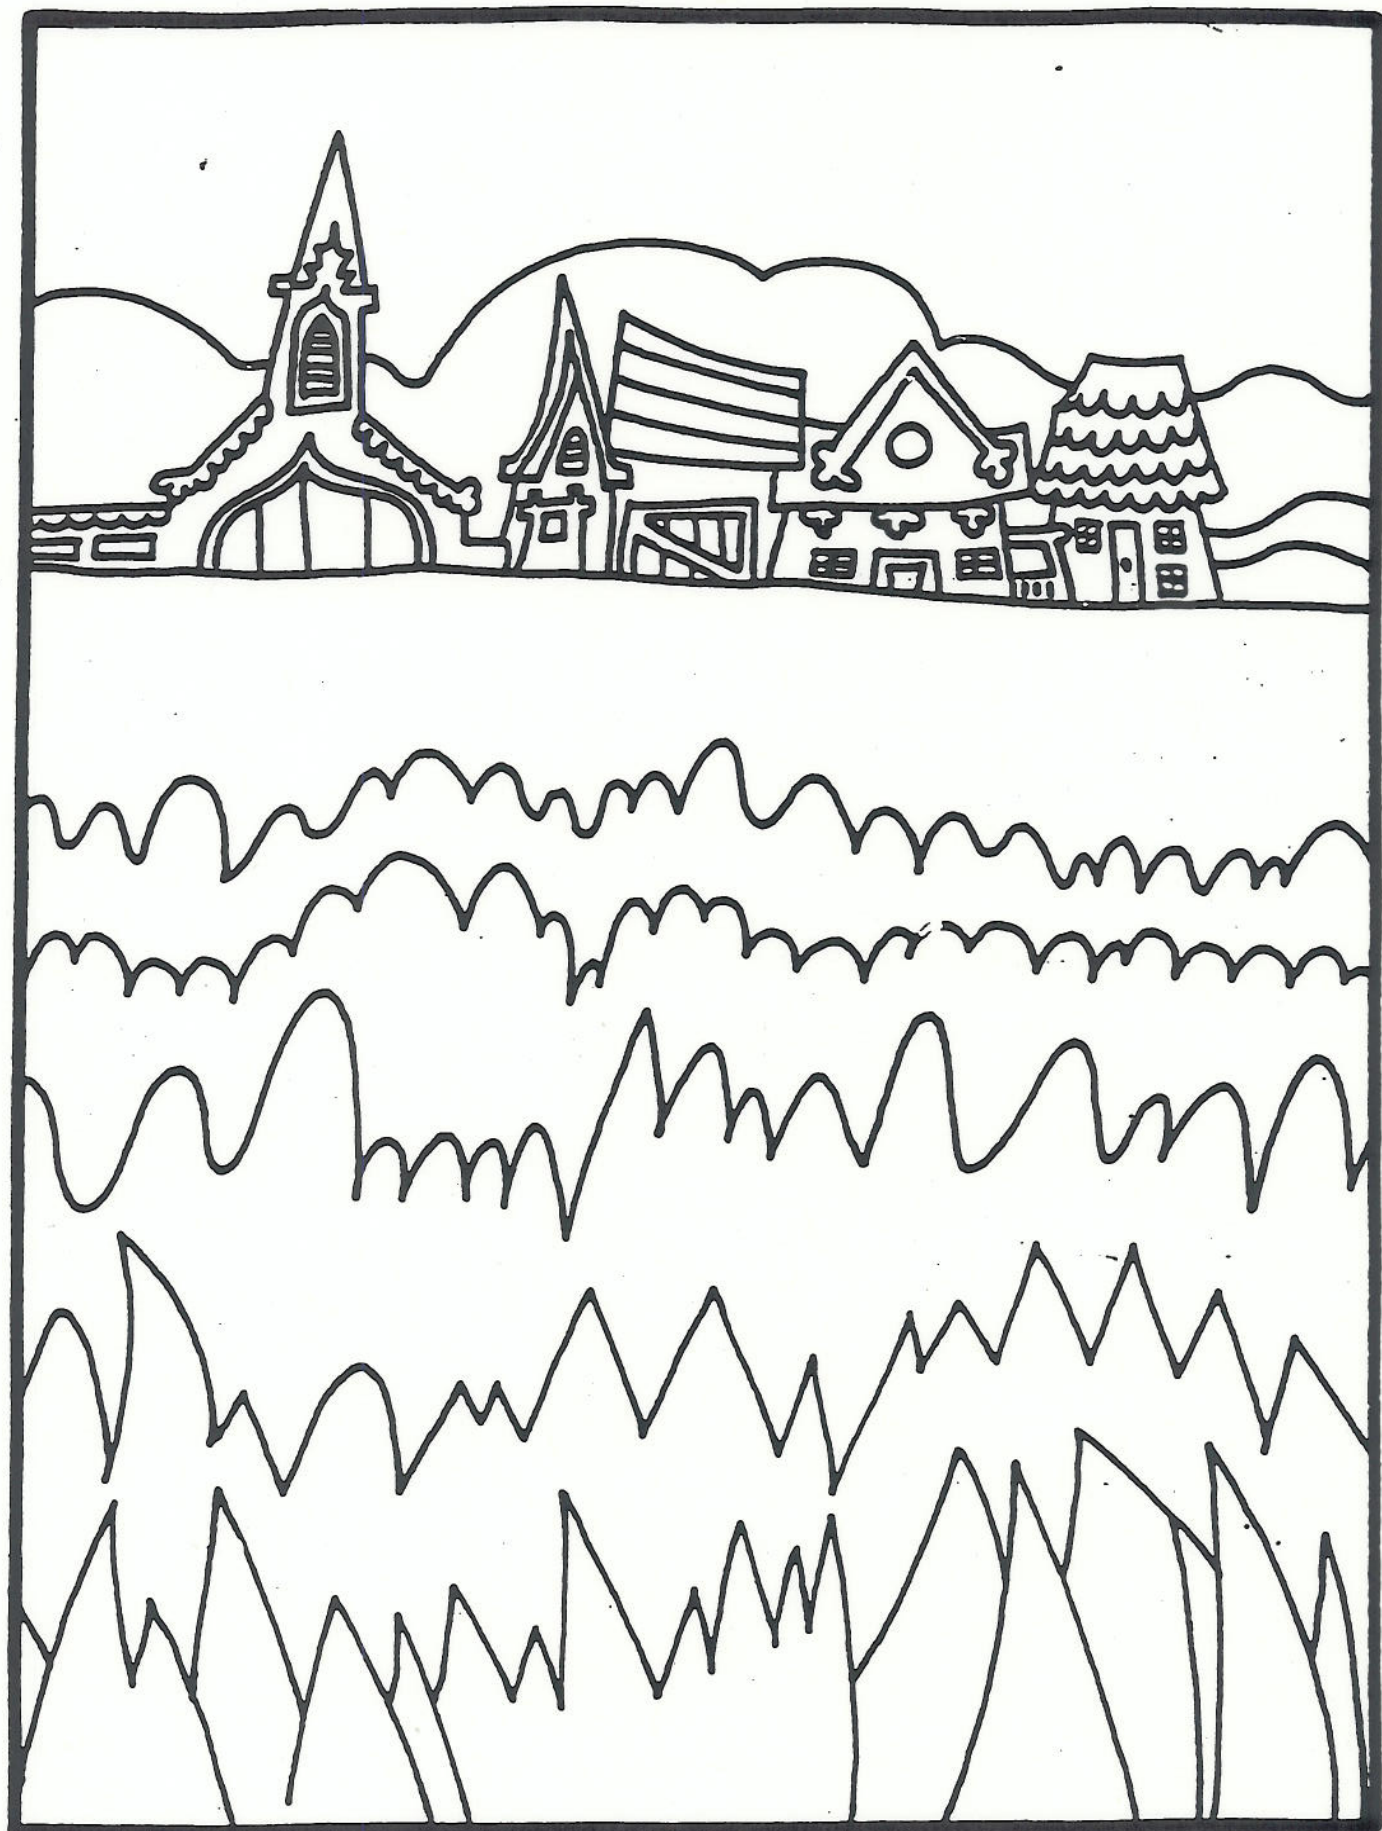

We can keep streets and neighborhoods clean . . .

We can restore the bright, clear skies . . .

And sparkling clean waters . . .

We can preserve our unspoiled land . . .

And someday the earth will be a nicer place.
