

Radiation Epidemiology Course

May 14-17, 2007

National Cancer Institute (NCI), National Institutes of Health (NIH)

The course is intended for persons with an interest in the health effects of exposure to radiation, particularly the relation between ionizing radiation and cancer. The course is aimed primarily at persons with backgrounds in epidemiology who are interested in learning more about radiation. Familiarity with basic epidemiologic concepts, terminology and methods of data analysis will be assumed, but the intent is that most of the material will be understandable by persons with college-level training in basic biology, chemistry and physics. All interested persons are welcome to attend, but advance registration is required as space may be limited. There is no fee for the course.

Location:
5635 Fishers Lane, Room T500
Rockville, Maryland 20852

Time:
May 14, 2007 – May 17, 2007
