## General Information

(1) Exam4 population $\mathrm{N}=3845$.

| clinic | $\mathrm{N}=3203$ | $83.3 \%$ |
| :--- | ---: | ---: |
| home visit | 417 | $10.8 \%$ |
| nursing home | 53 | $1.4 \%$ |

| long phone interview | 104 | $2.7 \%$ |
| unannounced home visit | 53 | $1.4 \%$ |
| TOTAL | 3845 | $100 \%$ |

(2) Participant identification number is H.P., a 4-digit number. We usually use H.P. to link with other files.
(3) All SAS files were created by version 6.08 in the mainframe and Windows.
(4) All SAS system files were sorted by ascending values of H.P. All answers for "Don't know/refused (9, 99, 999, etc)" have been recoded to missing in SAS system files but not changed on raw data files.
(5) First date of Exam4 was February 22, 1991

Last date of Exam4 was January 3, 1994

VARIABLE DESCRIPTION
Note: Starting date was supposed to be March 4, 1991. One cohort man was mistakenly called in for pilot study. Participant (H.P. =3989) came inFebruary 22, 1994 and completed the whole pilot exam but never called back for regular exam so we used his pilot exam data.

Finishing date was supposed to be end of October 1993. The last participant actually came in November 2, 1993. No participant was scheduled after November 2, 1993, except that the very last participant $($ H.P. $=4661$ ) came in January 3, 1994 because he lived on the mainland.
(6) Exam4 date (X4YR, X4MO, X4DY) is referred to as the date on the first page of the questionnaire. Some participants didn't finished the whole exam in one session. They came back for other parts (modules on questionnaire) of the exam. Thus, different modules may have different dates. There are a total 17 modules and 17 dates. Except for blood draw date, those dates were all keypunched in raw data files but not read in nor saved in SAS files.

## Interview Data

Most knowledgeable persons:
Quality Control Committee members - Dr. Beatriz Rodriguez, Dr. Kamal Masaki, Dr. Cecil Burchfiel, Randi Chen.

Data Entry: VIKING DATA ENTRY SYSTEM. Data was keyed in, then re-entered to verify and to correct by a different lab tech.

The SAS variable names and labels were created by Norma Dermond (CHS) using the SIR program. Randi Chen used those variable names and labels to create the SAS input program. He also modified the program and recoded "Don't know/Refused" (9, 99, 999, etc) to missing.

Family History File. (ref: page 1 Supplemental Questionnaire)
SAS file in mainframe: FAMILY.FEB95.EX4 (internal name is EX4)
SAS file in H.P. LAN: R: \DATASETS $\backslash$ MAIN $\backslash$ FAMFEB95.SD2
This file contains information on brothers and sisters. It is a multiple records per person file. The number of records depends on the numbers of brothers and sisters. If the participant had reported no siblings, then one record of " 0 " value for sibship number was entered and all other information (male/female, full/half...etc) was coded as blank (missing in SAS).

Equipment: Water-sealed spirometer (model S 155, Warren Collins, Braintree, MA) was connected to an IBM PS2 model 30/286 computer. Software came from S\&M Instruments, Doylestown, PA. Software program calculated pulmonary function variables, printed report and saved data into a file.

SAS input program was written by Darryl Chiu.
Clinic spiro data $(\mathrm{N}=3111)$
From the original raw data, Dr. Enright used his quality control program to generate the following six variables:

| CLSPBEST | best | -the index number of the best maneuver (1-3) |
| :--- | :--- | :--- |
| CLSPFLOW | flow | -the flow grade (A-F) |
| CLSPVOL | volume -the volume grade (A-F) |  |
| CLBESFVC | fvc | -the FVC from the best maneuver |
| CLBESFEV | fev1 | -the FEV1 from the best maneuver |
| CLBESPEF | pefr | -the PEF from the best maneuver. |

## Lab data (part 3 of 3)

III. Insulin

Most knowledgeable persons: Dr. Lot White, Dr. Santica Marcovina (Univ of Washington) Dominic Estrella, Darryl Chiu

Santica M. Marcovina, M.D.
Research Professor of Medicine and Core Laboratory Director
University of Washington School of Medicine
Northwest Lipid Research Laboratories
2121 N. 35th Street
Seattle, WA 98103

Blood vials sent to University of Washington. Data (fasting insulin and 2 hr post load insulin) sent back by diskette. Format is ASCII.

## ECG

Most knowledgeable persons: Dr. Katsuhiko Yan, Rand Chen, Dr. Irwin Scats
SAS input program was written by Rand Chen.

ECG charts were read and coded by Dr. Yan or lab techs. ECG variables were recorded on ECG code sheet (see page 39 questionnaire). Data were keypunched and verified by lab techs using the VIKING Data Entry System.

| Frequency distribution of ECG coders: |  |
| :---: | ---: |
| \#24 Dr. Yan | $\mathrm{N}=1919(51.4 \%)$ |
| \#31 Nancy Camacho | $957(25.7 \%)$ |
| \#70 Gregorio Julian | $853(22.9 \%)$ |
| TOTAL | $3729(100 \%)$ |

The following are ECG variables:
