

# ***Studying Genetic Variation II: Laboratory Techniques***

**Karen Mohlke, PhD  
Department of Genetics  
University of North Carolina**

## ***Genetic variation in other lectures***

- Population genetics, patterns of human genetic variation, linkage disequilibrium, HapMap, genome-wide association studies - Lynn Jorde
- Linkage analysis, genome-wide linkage studies, haplotype analysis, susceptibility to cancer- Elaine Ostrander
- Origins of genetic variants, types of variants, discovery methods, use of databases, HapMap, linkage disequilibrium - Jim Mullikan

## ***Human Genetic Variation***

- Types of variants
- Methods for scoring variants
- Genome-wide scoring of SNPs
- Structural variants

## ***Human Genetic Variation***

- Sequence repeats
- Single nucleotide polymorphisms
- Insertions and deletions
- Other structural variation

## *Microsatellite*

Example dinucleotide marker named  
AFM059XA9 and D3S1262

## *Microsatellites*

- Many alleles, highly informative
- >50,000 in human genome
- Relatively high mutation rate
- Used to build first framework map

## Single nucleotide polymorphisms (SNPs)

[G/A]

Three SNPs are located at positions 49,719,887,  
49,720,260 and 49,721,557.

## SNPs

- Less polymorphic/informative
- More stable inheritance
- ~1 SNP with frequency greater than 1% per 300 nucleotides (10 million in genome)
- Mutation at CpG 10-fold higher rate
- Exist in coding regions

## ***Deletion/insertion polymorphisms (indels)***

- One to many nucleotides present or not
- Example:

AGTATCTTCACAGAAATGACCATA  
AGTATCTTCACA**A**GAAATGACCATA

AGTATCTTCACA[-/A]GAAATGACCATA

## ***Indel polymorphisms***

Another example:

CAGACTCAATAAGCATGTTTACAGACTCAATA**AG**CATGTT  
TTTTTTTTTTTTTTGAGACGGAGTCGCTCTGCGCCA  
GGCTGGAGTCAGTGGCGCGATCTCGGCTCACTGCAAGCTC  
CGCCTCCCAGGTTACGCCATTCTCCTGCCTCAGCCTCCGA  
GTAGCTGGACTACAGGCTCCGCCACCAAGCCCCGGCTAAT  
TTTTGTATTTTAGAGAGACGGGGTTAGCATGTTTT

CAGACTCAATA**[LARGE INSERTION/-]**AGCATGTTTT

## ***Structural variation***

- Includes deletions, insertions, duplications, inversions, translocations
- ~1 million > 1 bp, at least 1500 > 1kb
- Many small indels are in linkage disequilibrium with nearby SNPs
- Some deletions and rearrangements recur between repeated sequences

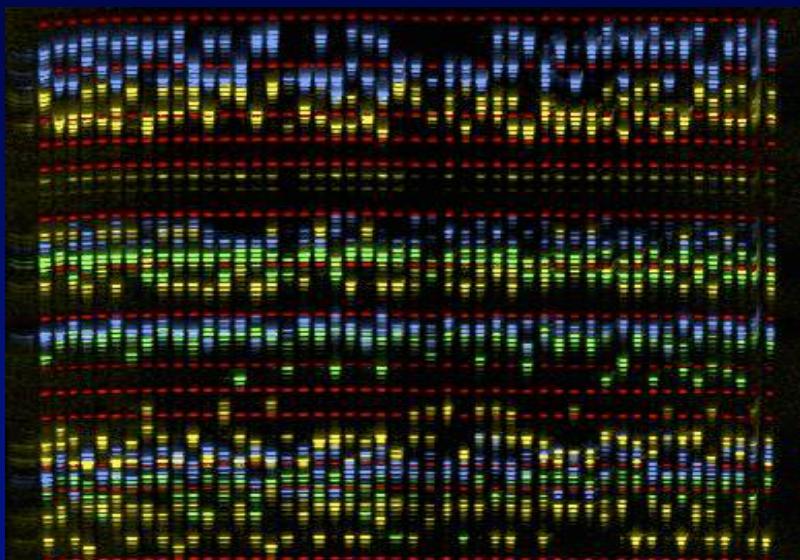

## ***Human Genetic Variation***

- Types of variants
- Methods for scoring variants
- Genome-wide scoring of SNPs
- Structural variants

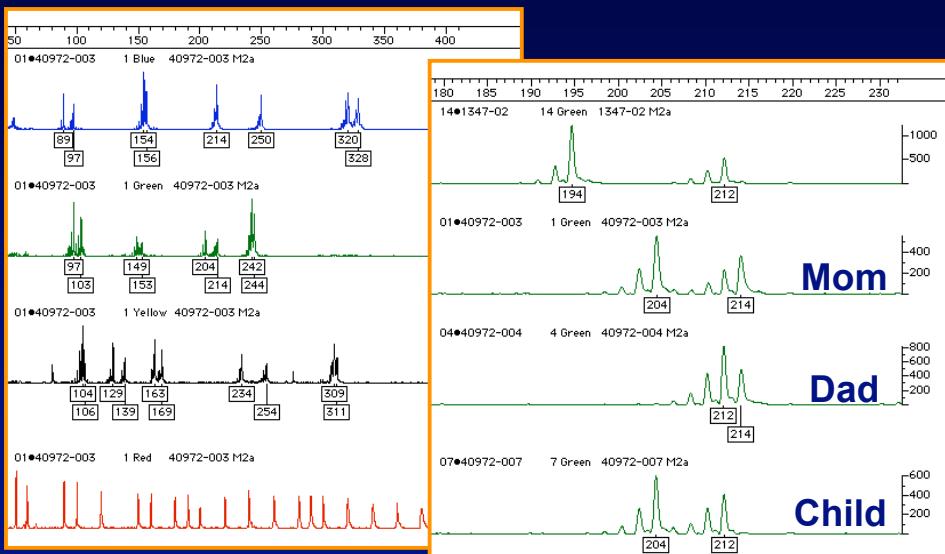

## ***Scoring Variants***

- Scoring = genotyping = typing
- Laboratory technique depends on
  - Type of variant
  - Fixed or custom set of variants
  - Number of variants
  - Number of samples

## ***Scoring Microsatellites***

## *Scoring Microsatellites*

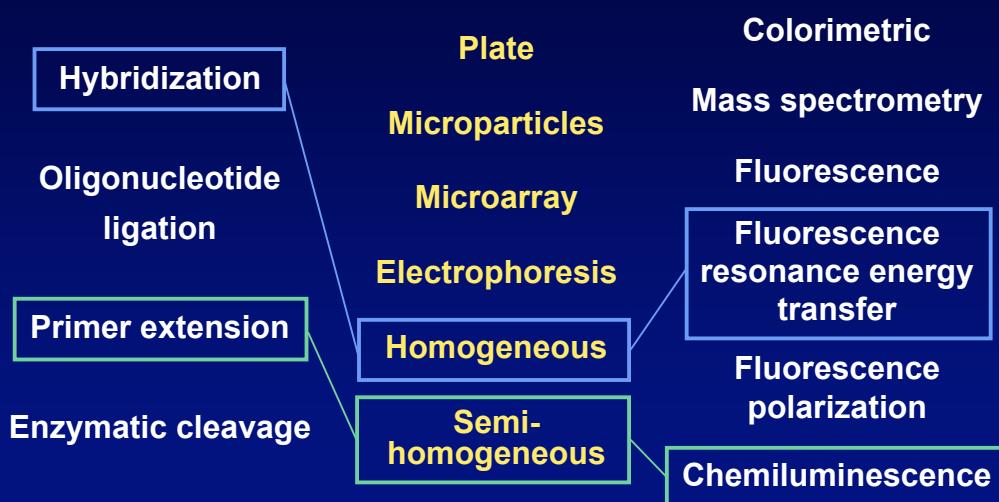

## *Scoring SNPs*

- Genotype accuracy
- Cost of assays and specialized instrument(s)
- Assay development time and ease
- Ability to automate

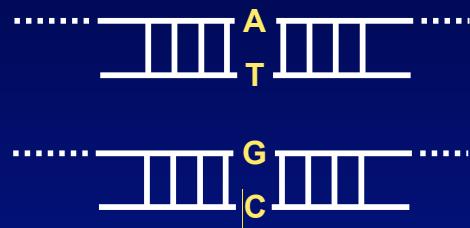

## **Scoring SNPs (2)**

- Time to perform assays
- Ability to multiplex
- Data accumulation and analysis
- Allele frequency quantification

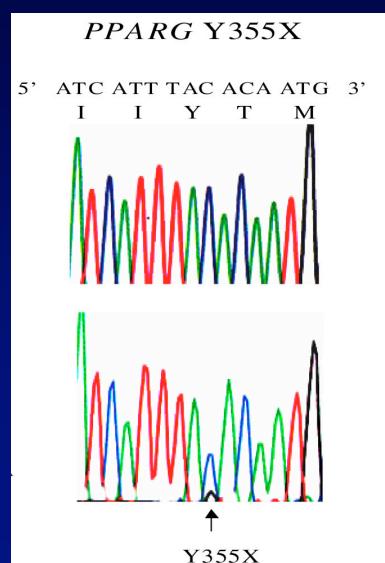

## **Overview of SNP typing methods**

## *Example SNP*

## *Sequencing*

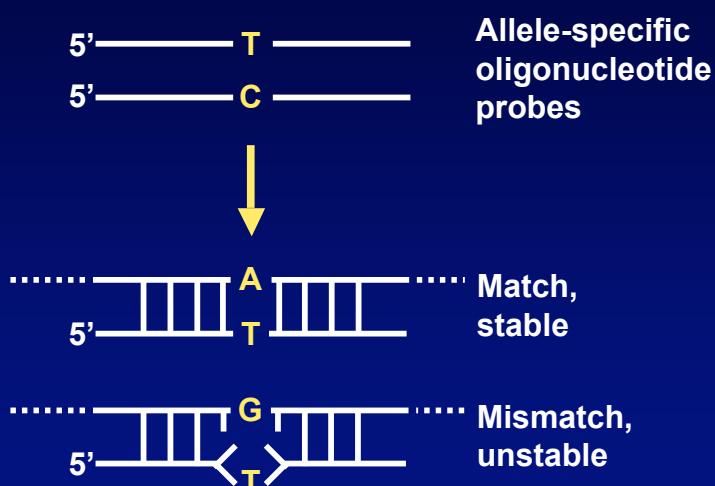

Francis et al. BMC Med Gen 2006 7:3

## *Sequencing*

- **Advantages:**
  - Instrumentation widely available
  - Easy and fast for small studies
- **Disadvantages**
  - Expensive for many SNPs or samples
  - Local sequence affects success

## *Hybridization*

## Affymetrix Custom Sequencing Array

affymetrix.com

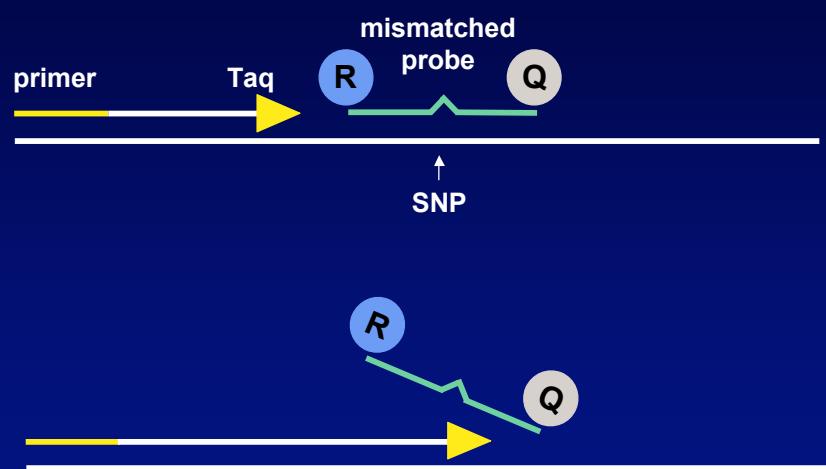

## Hybridization to Oligonucleotide Arrays

- **Advantages:**
  - Simple to perform
  - Highly multiplexed
  - Automated analysis
- **Disadvantages**
  - Custom chip expensive to design/create
  - Local sequence affects success

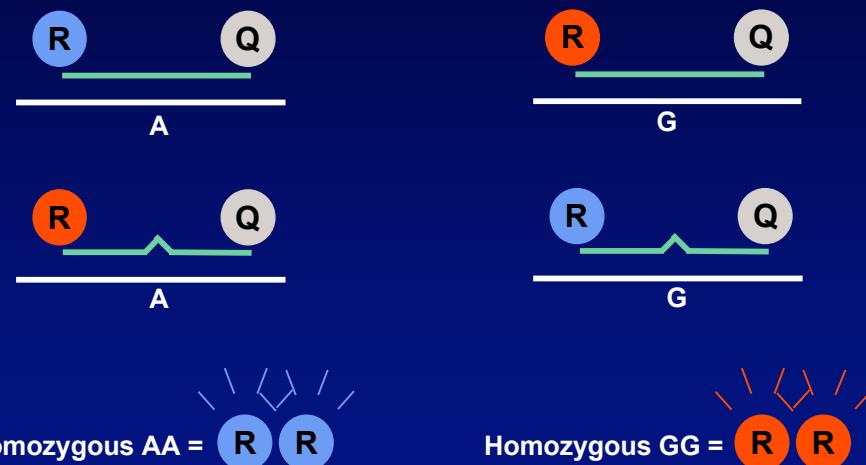

### *Fluorescence resonance energy transfer (FRET)*

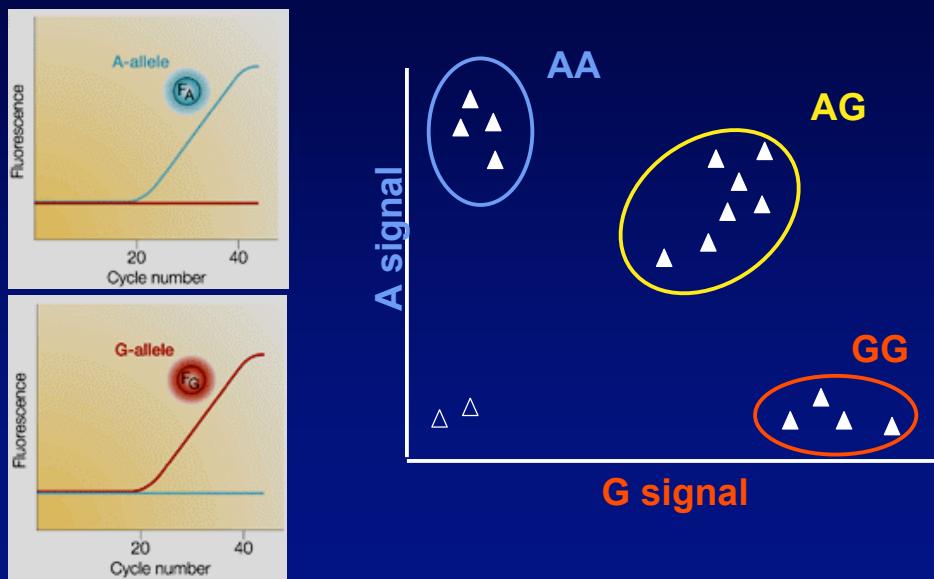

### *Fluorescence resonance energy transfer (FRET)*

## TaqMan competing probes

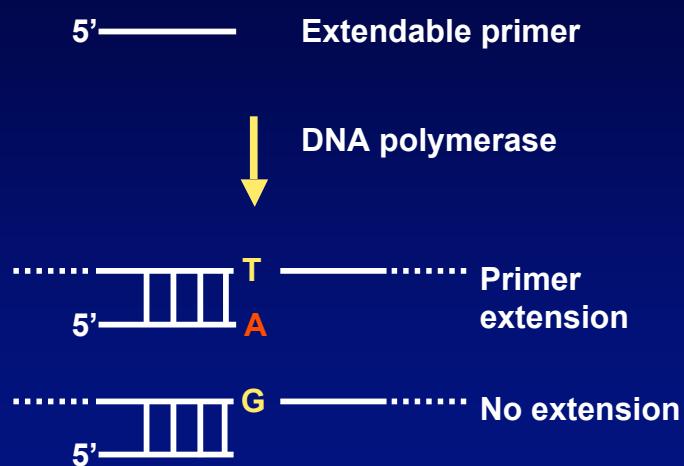

## TaqMan genotype scoring

## *TaqMan*

- **Advantages:**
  - Simple to perform
  - Closed-tube system
  - Accurate quantification
- **Disadvantages**
  - Expensive probes
  - No multiplexing
  - Assays require optimization

## *Primer extension = Minisequencing*

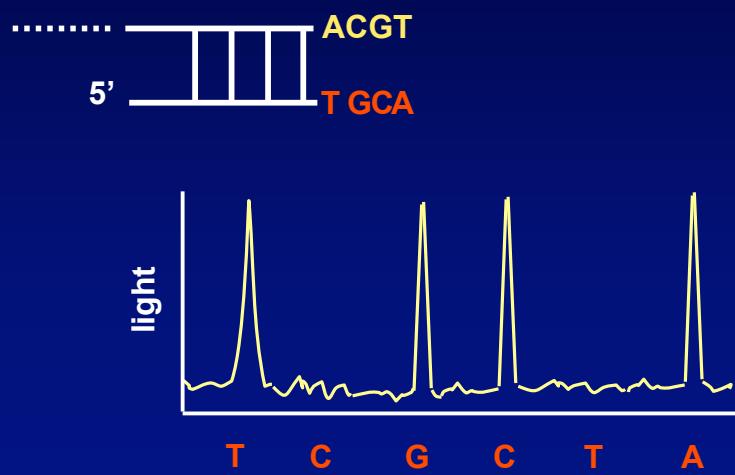

## *Pyrosequencing*

- Four enzymes
  - DNA polymerase
  - ATP sulfurylase--converts pyrophosphate to ATP
  - Luciferase--converts ATP to light
  - Apyrase--degrades excess nucleotides
- Nucleotides added sequentially

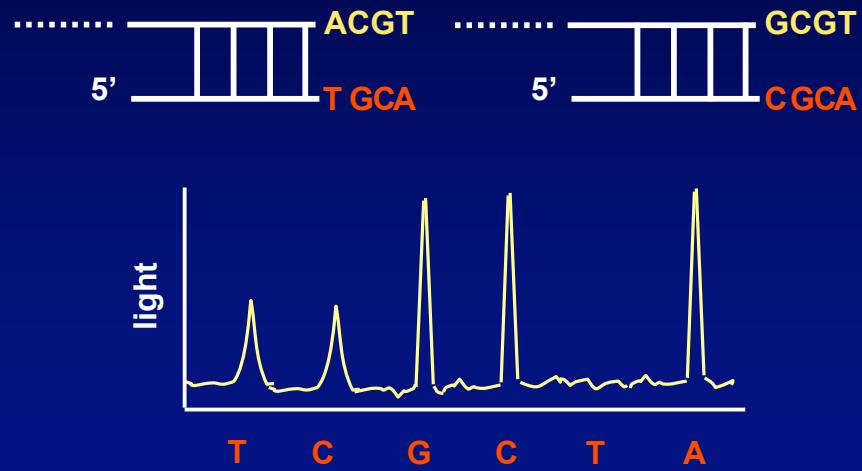

## *Pyrosequencing*

...[A/G]CGT...

## *Pyrosequencing*

...[A/G]CGT...

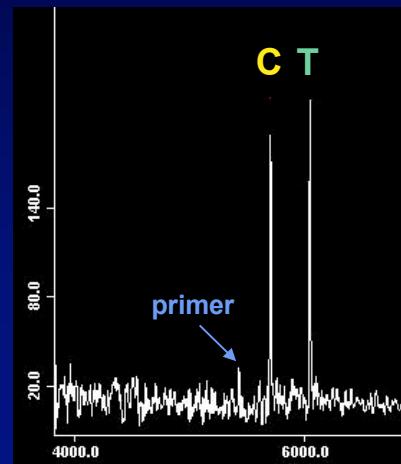

## *Pyrosequencing*

- **Advantages:**
  - Accurate
  - Accurate allele frequency estimation
  - Robust for closely spaced SNPs
- **Disadvantages**
  - Expensive reagents
  - Requires post-PCR processing

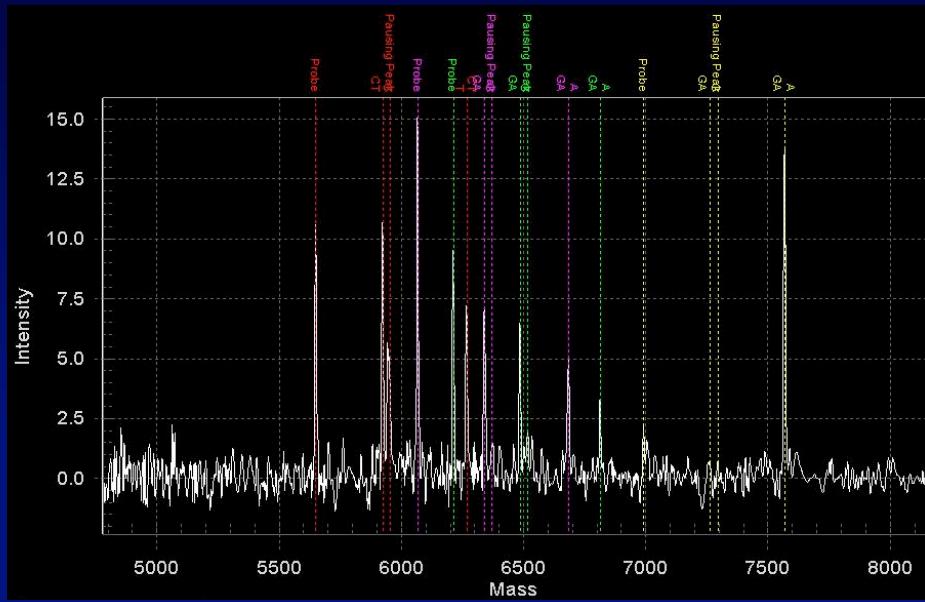

## *Primer extension mass spectrometry*

**Primer extension reactions  
designed to generate  
different sized products**

Mass in Daltons	
GGACCTGGAGCCCCCACC	5430.5
GGACCTGGAGCCCCCACCC	5703.7
GGACCTGGAGCCCCCACCTG	6047.9

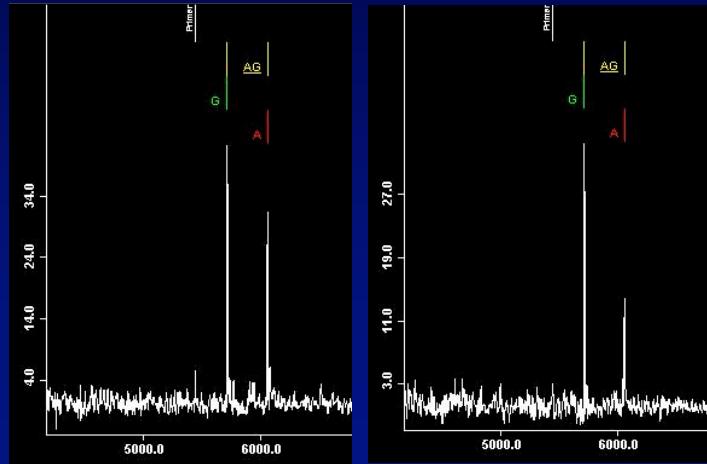

## *Mass spectrometry multiplexing*

## *Allelic quantification*

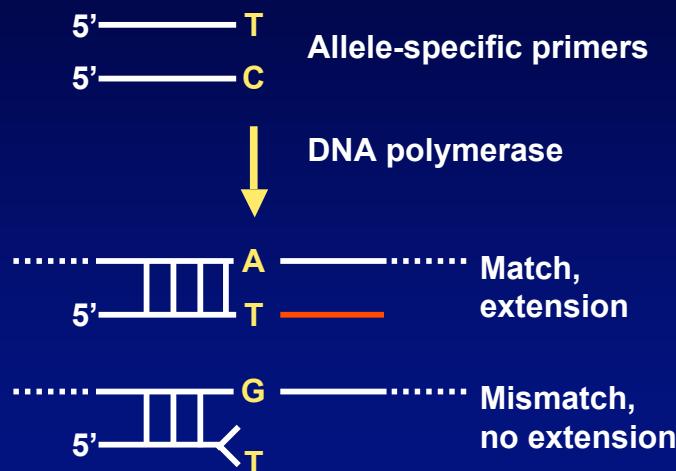

- Using cDNA or DNA pools or tumor sample
- Type SNP and determine relative allele frequencies

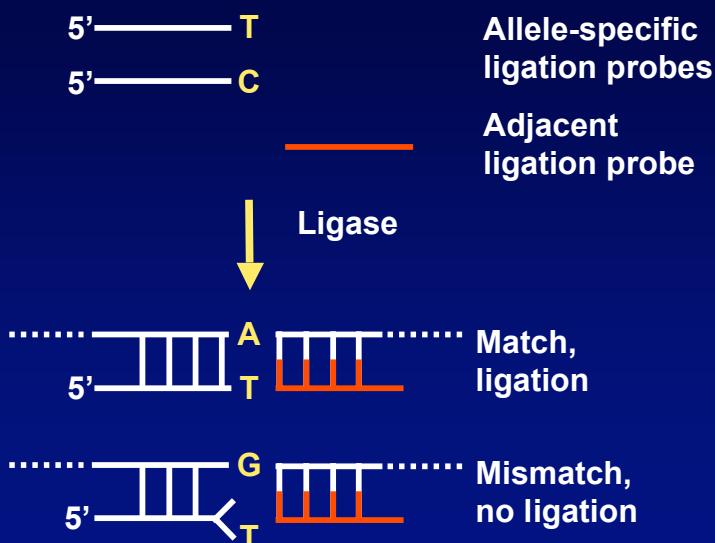

## *Primer extension mass spectrometry*

- **Advantages:**
  - Accurate
  - Automated assay design
  - Fast automated data collection
  - Multiplexing capacity
- **Disadvantages**
  - Expensive instruments, consumables
  - Extensive post-PCR processing

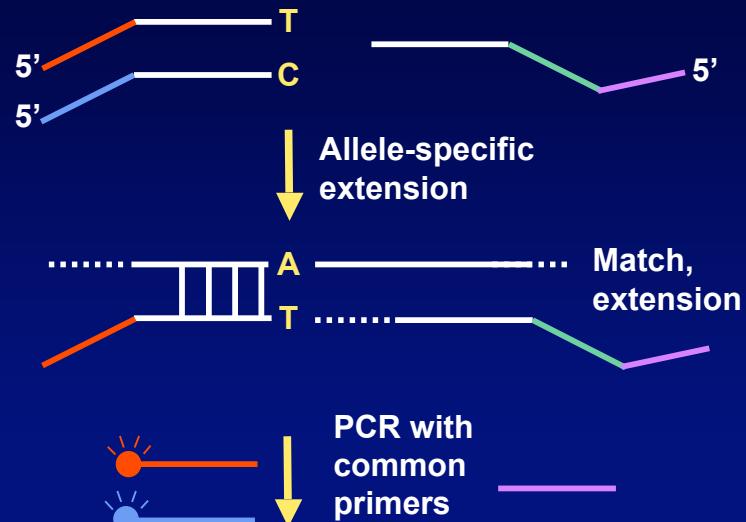

## *Allele-specific PCR*

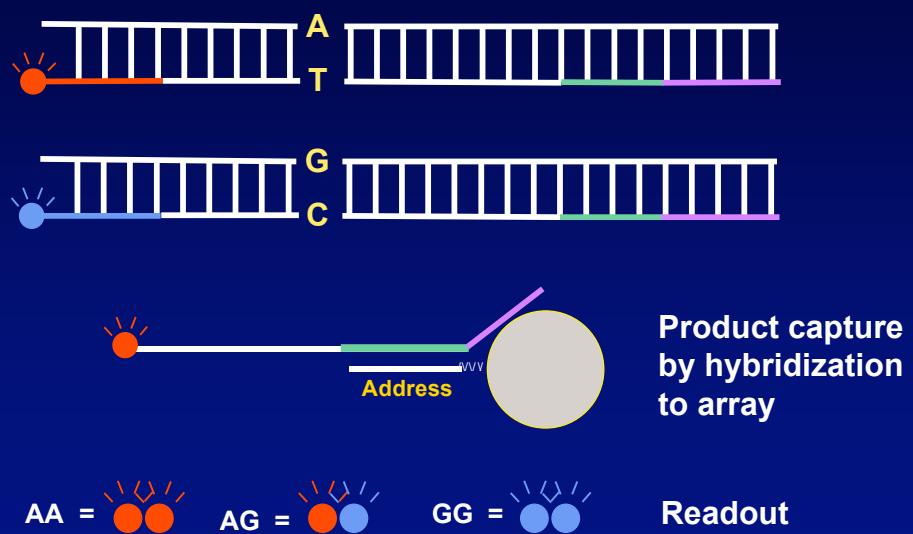

## *Oligonucleotide Ligation Assay (OLA)*

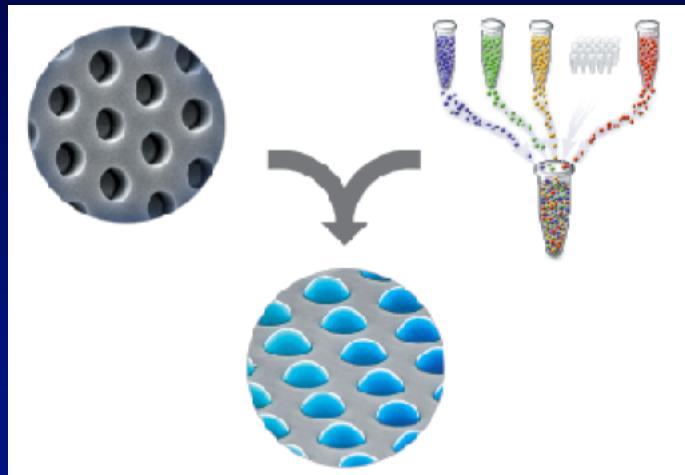

## *GoldenGate: Allele-specific extension*

## *GoldenGate: Allele-specific extension*

## *GoldenGate genotyping technology*

## *Illumina GoldenGate*

- **Advantages:**
  - Very highly multiplexed
  - Accurate
  - Low cost per genotype
- **Disadvantages**
  - Not cost-effective for small studies
  - Limits to SNPs that can be designed

## ***Quality control of genotype data***

- High genotype success
- Accurate duplicate genotypes
- No genotypes in no DNA controls
- Allele frequencies similar to databases
- Accurate on a second platform

## ***Quality control of genotype data***

- Test whether data are consistent with Hardy-Weinberg Equilibrium (HWE):  $p^2 + 2pq + q^2 = 1$
- Calculate observed frequencies p and q
- Use p and q to calculate expected genotype frequencies
- Compare observed and expected genotype frequencies by  $\chi^2$  test with 1 degree of freedom

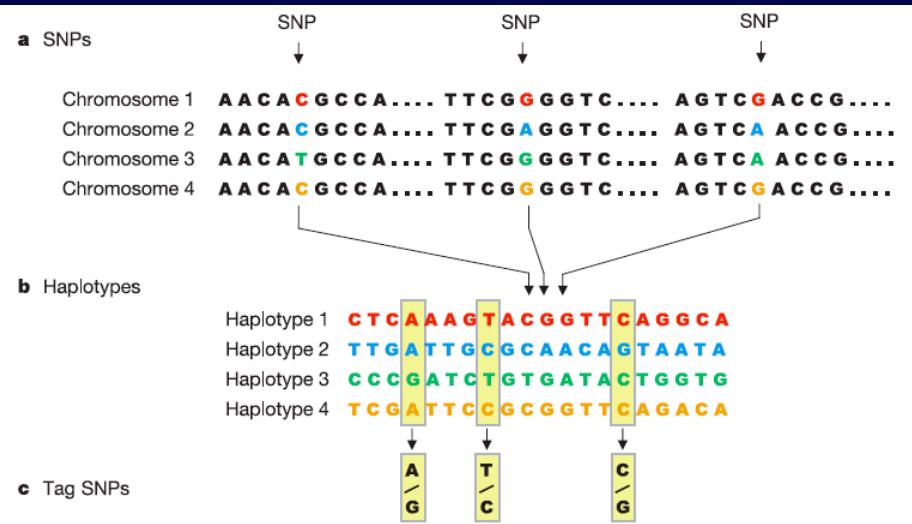

## ***Human Genetic Variation***

- Types of variants
- Methods for scoring variants
- Genome-wide scoring of SNPs
- Structural variants

## ***Genome-wide SNP panels***

- 10,000 - 650,000+ SNPs per experiment
- Affymetrix, Illumina, Parallele, Perlegen
  - Random SNPs
  - Selected haplotype tag SNPs
  - Coding or nonsynonymous SNPs

## Selecting 'haplotype tag' SNPs

International HapMap Consortium (2003) Nature 426:789

## Affymetrix GeneChip Array

Figure 1: GeneChip® Mapping Assay Overview.

## Illumina Infinium Assays

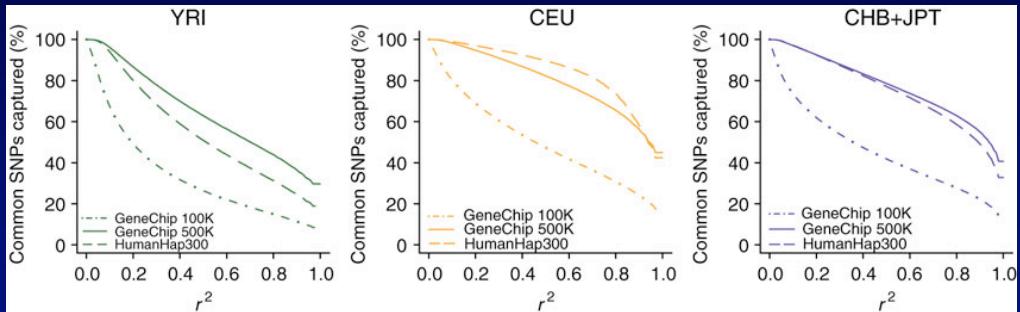

illumina.com

## Genomic coverage: *maximally efficient tag SNP sets*

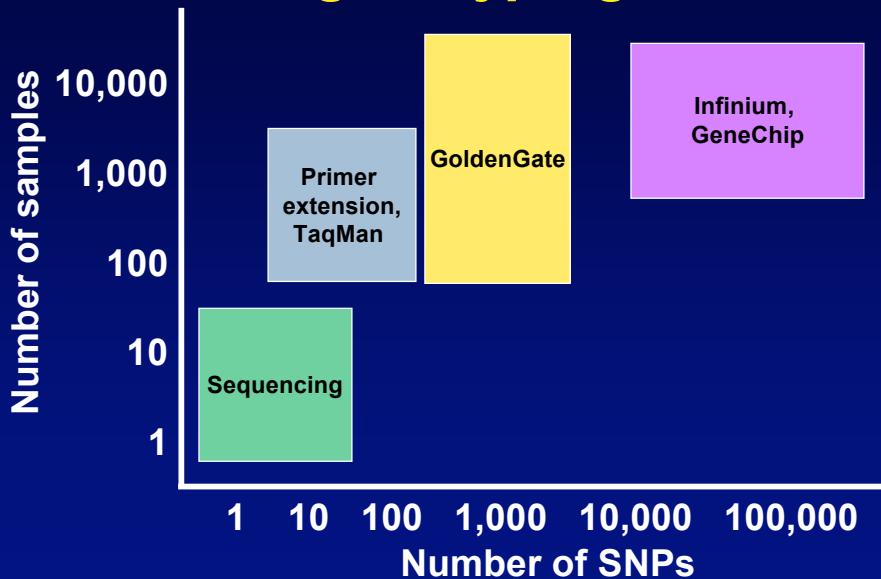

Barrett et al. (2006) NatGen 38:659

## *Coverage of genome-wide panels*

Pe'er et al. (2006) NatGen 38:663

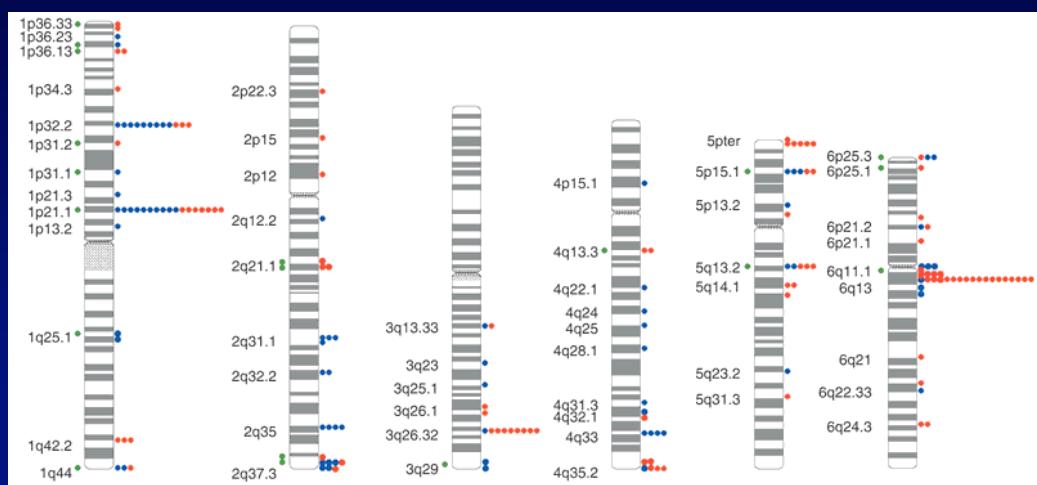

## *Which SNP genotyping method?*

# ***Human Genetic Variation***

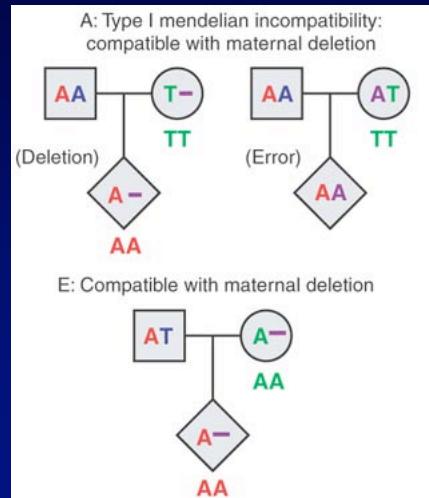

- Types of variants
- Methods for scoring variants
- Genome-wide scoring of SNPs
- Structural variants

## ***Structural variants span the genome***

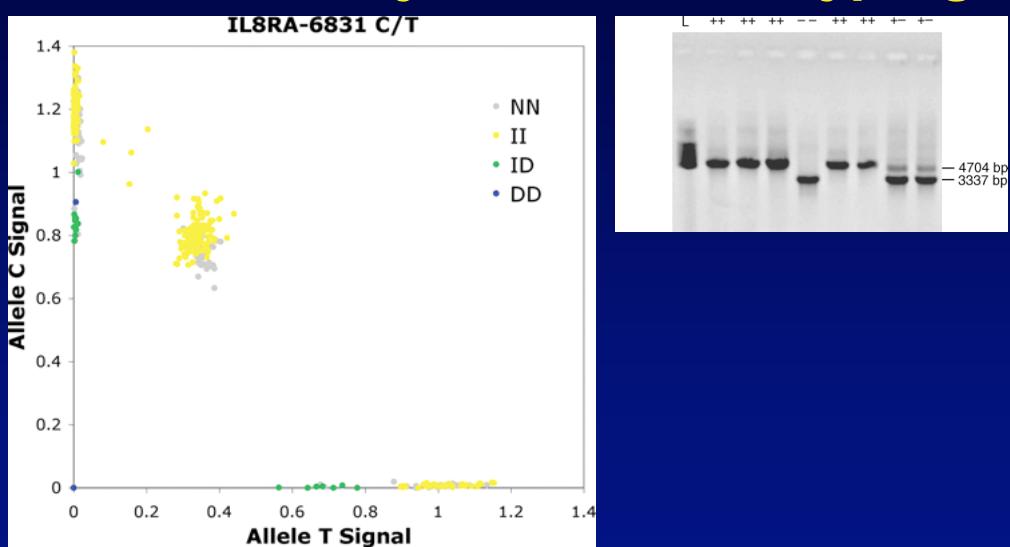

Iafrate et al. (2004) NatGen 36:949

## Detecting deletions from SNP data

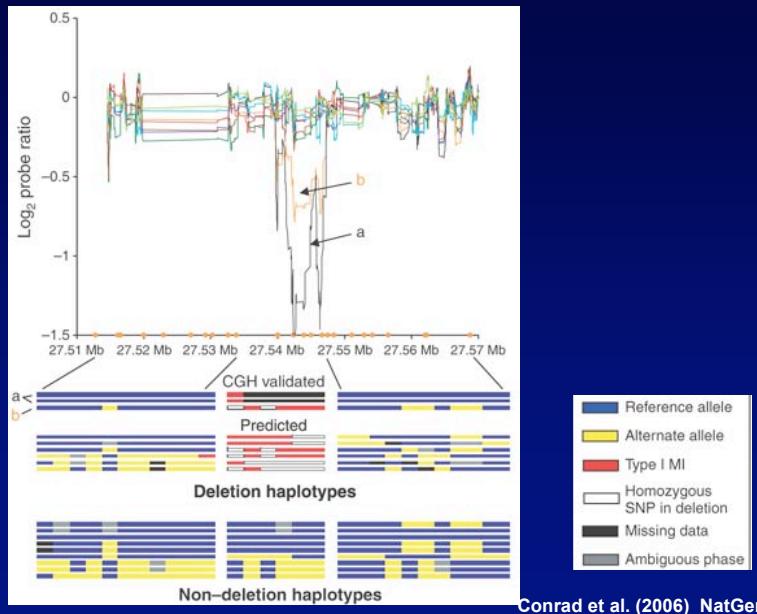

Conrad et al. (2006) NatGen 38:75

## Allele Intensity in SNP Genotyping

Carlson et al. (2006) HMG 15:1931

## **Comparative genomic hybridization**

## **Future**

- Faster, cheaper, easier genotyping
- More SNP panels for genome-wide association studies
- Genome maps of structural variants
- Discovery of new susceptibility genes for complex traits
