

Dear Dr. William Martin,

I would like to make the following comments as a submission.

1) Environmental risk-factors for tuberculosis have been overlooked, especially as it relates to linkages with tobacco use and domestic fuel exposure.

2) Injuries as a significant contributor in terms of environmental burden of disease (EBD) has also not been mentioned. In terms of EBD in South Asia alone, it is one of the top five contributors.

3) Lastly but be no means the least, the health consequences of climate change have not been given its due importance, considering it's future implications.

My details including sponsoring organization are mentioned below. The mail is copied to Dr. Suneel Pandey, Area Convenor of our Centre for information.

Thanks and regards,

Nitish
