Acknowledgments

This report was prepared under the direction of the Agriculture and Financial Statistics Division. Many divisions contributed to the preparation: Economic Statistical Methods and Programming, Data Preparation, Administrative and Publications Services, Geography, Computer Services, Systems Support, and Economic Planning and Coordination.

Representatives of the Government of the Virgin Islands provided valuable advice in establishing data content and determining publication format.

Data collection was carried out under the direction of Eric Dawson, Commissioner of Economic Development and Agriculture of the Virgin Islands, under a special agreement with the Census Bureau. The data collection activity was conducted by census enumerators under the supervision of Dr. Richard Moore, Project Leader.

Special tribute is paid to the many farm operators who furnished the information requested. Only through their cooperation was it possible to collect and publish the data in this report.

If you have any questions concerning the statistics in this report, call:

Introduction

HISTORY

The 1992 census is the 12th census of agriculture of the Virgin Islands. The first, taken in 1917, was a special census authorized by the Secretary of Commerce. The next agriculture census was taken in 1930 in conjunction with the decennial census, a practice that continued every 10 years through 1960. The 1964 Census of Agriculture was the first quinquennial (5-year) census to be taken in the Virgin Islands. For the quinquennial census of 1969, the data were collected in 1970 in conjunction with the 1970 Censuses of Population and Housing. The 1974 census was taken independently of any other censuses. In 1976, Congress authorized the census of agriculture to be taken for 1978 and 1982 to adjust the data reference year to coincide with the 1982 Economic Censuses covering manufacturing, mining, construction, retail trade, wholesale trade, service industries, and selected transportation activities. After 1982, the agriculture census reverted to a 5-year cycle to be taken covering years ending in 2 and 7.

USES OF THE CENSUS

The census of agriculture is the recognized source of statistics about the Virgin Island's agriculture production and the only source of consistent, comparable data at the island level. Census statistics are used to measure agricultural production and to identify trends in an ever changing agricultural sector. Many local programs use census data as a benchmark for designing and evaluating surveys. Private industry uses census statistics to provide a more effective production and distribution system for the agricultural community.

AUTHORITY AND AREA COVERED

The 1992 Census of Agriculture was taken in accordance with the provisions of Title 13, United States Code, reaffirmed by section 818 of the Agriculture and Consumer Protection Act of 1973 (Public Law 93-86). Sections 142(a) and 191 provide for a census of agriculture every 5 years in each State, the District of Columbia, Puerto Rico, Guam, the Virgin Islands, and the Commonwealth of the Northern Mariana Islands. The census data for the Virgin Islands may be collected by the Governor or a representative from his/ her staff to act as census supervisor, in accordance

with a Memorandum of Agreement approved by the Director of the Bureau of the Census and the Commissioner of the Department of Economic Development and Agriculture of the Virgin Islands.

FARM DEFINITION

The data presented in this report relate to places qualifying as farms for census purposes. For the 1992 Census of Agriculture in the Virgin Islands, a farm was defined as any place from which \$100 or more of agricultural products were sold or normally would have been sold during the census year. This is the same definition used for the 1987 Census of Agriculture.

COMPARABILITY OF DATA

In general, data from the 1992 census are comparable with those of previous censuses.

TABULAR PRESENTATION

Tables 1 through 17 show detailed data for Saint Croix, Saint John and Saint Thomas, and for the Virgin Islands as a whole. Tables 18 through 21 provide 1992 Virgin Islands data cross tabulated by tenure of operator, age of operator, size of farm, and value of agricultural products sold.

SPECIAL TABULATIONS

Custom designed tabulations can be developed to individual user specifications on a programming cost reimbursable basis. Inquiries about special tabulations should be directed to the Chief, Agriculture and Financial Statistics Division, Bureau of the Census, Washington, DC 20233.

CENSUS DISCLOSURE RULES

In keeping with the provisions of Title 13, United States Code, no data are published that would disclose the operations of an individual farm. However, the number of farms in a given size category or other classification is not considered a disclosure, so this information may be given even though other information is withheld.

DOLLAR VALUES

All dollar values presented in this report are expressed in current dollars, i.e., 1992 data are expressed in 1992 dollars, and 1987 data in 1987 dollars. The dollar values have not been adjusted for changes in price levels between census years.

INVENTORIES, PRODUCTION, AND SALES DATA

Inventories of livestock, poultry, and machinery and equipment are the number on hand at the time of enumeration. Crop production, crop and livestock sales, and expense data are for the 12-month period between July 1, 1992, and June 30, 1993.

ABBREVIATIONS AND SYMBOLS

The following abbreviations and symbols are used throughout the tables:

- Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (NA) Not available.
- (X) Not applicable.
- (Z) Less than half of the unit shown.

Appendix A.

General Explanation

DATA COLLECTION

Method of Enumeration

As in the previous censuses of the Virgin Islands, the direct enumeration procedure was used in the 1992 Census of Agriculture. The statistics in this report are data collected from farm operators during the period from July to the middle of August 1993. For the enumeration, the Virgin Islands were divided into 20 Enumeration Districts (ED's) and each district was clearly delineated on special ED maps prepared for the census.

Each enumerator was assigned an ED and given a map of the area to be enumerated. The enumerators were also given a list of individuals farming during the 1987 Census of Agriculture as well as other individuals presently known to be conducting farm operations. The enumerators were required to check all persons on their list.

Enumerators were also instructed to ask enough questions about tracts of land on which no one lived to determine whether agricultural data should be collected from the person in charge of the land. This procedure was designed to assure the complete coverage of all land used for agriculture, whether by an individual, a corporation, or an institution.

To avoid enumeration of the same place more than once, rules were established whereby enumerators could determine who was responsible for completing a report form for a given place. If the person in charge of an agricultural operation lived outside of the ED in which the land under his/her control was located, the enumerator assigned to the ED in which the operator resided was responsible for completing his/her report form. If a place was partly in one ED and partly in another, the enumerator for the ED in which the operator lived was responsible for completing the report form to include all the land the person operated in the Virgin Islands, regardless of the ED.

Training Program

The project manager, crew leaders, and enumerators employed for the census in the Virgin Islands received special training in accordance with instructions prepared by the Bureau of the Census. The training included practice in interviewing, filling out the report form, and detailed discussion of the enumerator's instructions.

Report Form

Prior to each agriculture census, the Census Bureau reviews the content of all census report forms to eliminate inquiries no longer needed, to identify new items necessary to meet user needs, and to better describe the agricultural situation in the Nation. Data requests are solicited from farm organizations, land-grant colleges and universities, State and Federal agencies, State Departments of Agriculture, agribusinesses, and other users. Each respondent is asked to identify and justify its specific data needs.

The report form for the 1992 Census of Agriculture for the Virgin Islands of the United States was prepared by the Outlying Areas Branch of the Agriculture and Financial Statistics Division, Bureau of the Census, in cooperation with the Department of Economic Development and Agriculture of the Virgin Islands. After receiving comments from the Virgin Islands Department of Economic Development and Agriculture (which coordinated review of the report form by data users in the Virgin Islands), the content of the census report form was modified between 1987 and 1992 to more accurately reflect the Virgin Islands' agriculture or to make the form easier to complete.

MAJOR DATA CHANGES

Based on feedback from data users in the Virgin Islands, the following changes were made to the report form used to collect data for the 1992 Census of Agriculture for the Virgin Islands of the United States:

- Dropped question on how many wells are on the place
- Dropped question on whether or not the place had electricity and/ or running water
- Dropped question on place of birth of operator
- Dropped questions on home consumption
- Dropped value of sales for individual crops - sales now collected for type of crops only, such as field and forage crops, vegetables, fruits and nuts, and nursery crops
- Dropped value of sales for each type of animal - sales now collected for type of livestock only, such as cattle and calves, hogs and pigs, and other livestock
- Replaced crops harvested and crops sold with crops harvested for sale
- Added section on aquaculture (raising of fish, shrimp, etc., in ponds)

DATA PROCESSING

The processing of the 1992 Census of Agriculture for the Virgin Islands of the United States was done in the Agriculture and Financial Statistics Division at the Bureau of the Census. Each report form was reviewed and coded prior to being data keyed. Report forms not meeting the census farm definition were voided. The remaining report forms were examined for accuracy, consistency, and completeness. Reporting errors in computations, units of measures, data inconsistencies, and misplaced entries were corrected. Missing information was derived using reported data for similar type and size farms in nearby areas.

After all the report forms had been reviewed and coded, the data were keyed and subjected to a thorough computer edit. Any inconsistencies were reviewed, corrected, and keyed to a correction file. The corrected data were then tabulated by the computer and available for review.

Prior to publication, tabulated totals were reviewed by statisticians to identify inconsistencies and potential coverage problems. Comparisons were made with previous census data, as well as other available data. The computer system provided the ability to review up-to-date tallies of all selected data items for various sets of criteria which included, but were not limited to, geographic levels, farm types, and sales levels. Data were examined for each set of criteria and critiqued with a write-up (criticism) done for data that were inconsistent. Each criticism was then researched by examining individual data records contributing to the tabulated total. When necessary, data inconsistencies were resolved by carrying corrections to data records.

DEFINITIONS AND EXPLANATION

The following definitions and explanations relate to items that are in the tables. Most of the definitions are from the instructions given to enumerators. For an exact wording of the questions and instructions on the report form, see the report form in appendix B.

Crops harvested. The report form contained individual inquiries for crops commonly grown and space to write in those less frequently produced. The information requested in 1992 includes acres of crops harvested and pounds harvested for sale.

The units of measure for reporting quantities of some crops have varied from one census to another. The aim has been to permit reporting in the units of measure currently in use. The quantities harvested for each crop are expressed in the units of measure given on the 1992 report form.

Field or forage crops. The land area from which individual crops were harvested for sale was obtained for field and forage crops in acres and 10th of acres. When two or more crops were harvested from the same land, the area was to be reported for each separate crop or planting. Total quantities of each crop harvested for sale were also reported.

Vegetables. Land area for individual crops and the quantity harvested for sale for each crop were collected.

Fruits, nuts, or nursery crops. The total number of acres planted in bearing and nonbearing fruit and nut trees was collected. For individual fruit or nut crops, data on the number of bearing and nonbearing trees and the quantity harvested for sale were reported. For nursery crops, the land area harvested, both square feet under cover and acres in the open, was collected along with the value of sales.

Equipment. The following types of equipment on the place at time of enumeration, regardless of ownership, were reported if they were operable:

Tractors. This includes all wheel and tracklaying (crawler) tractors and garden tractors.

Motortrucks. This includes pickup trucks and truck-trailer combinations.

Automobiles. This includes jeeps and station wagons used primarily as passenger cars.

Expenses. The 1992 report form contained questions on six types of farm expenses incurred between July 1, 1992, and June 30, 1993, whether made by the farm operator, his/ her landlord, or both. A farm operator who rented part of his/ her land to others reported only the expenses on the land he/ she operated.

Machine hire and customwork. Expenses for machine hire and customwork relate to tractor hire, plowing, and spraying. Any amount spent for the labor involved is considered to be part of the expense. The costs of hauling, trucking, or of exchange work without pay are omitted.

Hired farm labor. Expenses for hired farm labor include total cash payments made to family members and others for farm labor. Payments to persons supplied by a contractor or a cooperative organization and paid directly by them or by the person in charge are also included. Payments are excluded for housework, contract construction work, customwork, and repair and installation work performed by persons specifically employed for the work.

Purchases of feed. Expenses for feed for livestock, poultry, and fish include total cash payments made for pasture used, salt concentrates, mineral supplements, grain, hay, millfeeds, and any other items purchased for feeding livestock, poultry, and fish on the place. Expenses made for the grinding and mixing of feed and the estimated cost of items furnished to the operator by a landlord or others are also included. Payments made by a tenant to a landlord for feed grown on the tenant's farm are excluded.

Purchases of insecticides, fungicides, and herbicides. This item relates to total cash expenses for all chemicals, sprays, dusts, etc., used to control weeds, pests, insects, or disease on crops and livestock.

Purchases of fertilizers and manure. These expenses include the total amount spent for manure and commercial fertilizers of all kinds for use on the farm.

Purchases of livestock, poultry, and fish. This item includes all cash expenses for livestock, poultry, and fish purchased for the place.

Farm operator. The term "operator" designates a person who operates a farm, either by doing the work himself/ herself or by directly supervising the work. The operator may be the owner, a member of the owner's household, a hired manager, or a tenant, renter, or sharecropper. If the operator rents land to others or has land worked on shares by others, he/ she is considered the operator only if the land is retained for his/ her own operation. In the case of partnership, only one partner is counted as an operator. By definition, the number of operators is the same as the number of farms.

Farms or operators reporting. Figures for "farms reporting" or "operators reporting" represent the number of farms or operators reporting the specified item. The difference between the total number of farms and the number of farms reporting a particular item represents the number of farms not having that item.

Land in farms. The land in farms was determined from the answers to questions 1 through 4 in section 1 of the report form (see appendix B). The amounts of land reported as owned and reported as rented from others were added together, and the amount of land reported as rented to others was subtracted from that sum. The result represents "land in farms."

Land owned. This includes all land that the operator or his/ her spouse held under title, purchased contract, homestead law, or as heir or trustee of an undivided estate at the time of enumeration.

Land rented from others. This includes not only land the operator rented or leased from others, but also land worked on shares for others or land occupied rent free.

Land rented to others. This includes all land that the operator rented to others and all land assigned to others on shares or rent free. For the most part, land rented to others represents agricultural land, but it also includes land rented for residential or other purposes. The tenant is considered to be the operator of land leased, rented, or worked on shares, even though his/ her landlord may supervise the operations. The landlord is considered to be the operator of only that portion of the land not assigned to tenants.

Land use. Land in farms at the time of enumeration is categorized according to the way it was used during the 12-month period between July 1, 1992, and June 30, 1993. The land uses described in the following paragraphs are mutually exclusive in that each acre of land is counted only once, even though it may have had more than one use during the year.

Cropland harvested. This refers to all land from which any crop was harvested. It also includes land in field crops that were grazed when mature or almost mature, and land in nonbearing fruit or nut trees and plants. Land from which two or more crops were harvested and which was also used for other purposes, either before or after the crops were harvested, was to be reported as cropland harvested without regard to the other uses.

Other cropland. This includes all cropland on the place that was used for pasture and cropland on the place that was not used for crops or pasture. It includes land on which there was total crop failure due to hurricane, flood, drought, insects, fire, or other causes; cropland lying idle; and cropland planted with soil improvement grasses, or other cover crops planted for improvement. It does not include land so hilly, rocky, or wet that the cost of improving it for cultivation would be more than the operator could pay. Nor does it include land in roads, streams, or swamps.

Pasture or grazing land. This refers to all land used for pasture or grazing, except cropland. It includes all woodland where livestock pastured or grazed. It does not include cropland, even though cattle or other livestock may have been grazed on it.

Woodland. This includes all land that is covered in woods or forests. It does not include woodland pasture.

Other land. This refers to all land not included in the other land use classifications, such as house and other building lots, lanes, roads, ditches, and land area of ponds and wasteland.

Livestock, poultry, and fish. Data for livestock, poultry, and fish show the quantity sold during the last 12 months, and the number of livestock and poultry on hand at the time of enumeration. All livestock and poultry on the place were enumerated on the place they were at the time of the enumeration regardless of ownership. Livestock on unfenced land were to be reported as being on the place identified as the headquarters of the person who had control over them.

Operator characteristics. Data were obtained to classify the operators according to five characteristics.

Residence of operator. Operators were classified by residence according to whether or not they lived on the farms operated.

Year began operating present farm. Enumerators were instructed to obtain the year an operator began to operate the farm, i.e., the first year the operator took continuous charge of the present farm or any part of it.

Age of operator. Operators were classified by age into six groups. The average age was obtained by dividing the sum of the ages of all operators reporting by the number reporting.

Main occupation. If the operator devoted 50 percent or more of his/ her work time to agricultural activities, his/ her main occupation was considered to be agriculture, otherwise his/ her occupation was considered to be nonagriculture.

Work off farm. The extent to which operators rely on nonfarm sources for part of their income is indicated by the number of days worked off the farm during the year. Work off the farm was defined to include work on someone else's farm for pay as well as all types of nonfarm jobs, businesses, and professions whether the work was done on the farm premises or elsewhere. Exchange work was not included.

Value of products sold. Data for value of products sold were obtained for each group of crops or main type of livestock sold from the farm. Data were obtained for sales of field and forage crops, vegetables, fruits and nuts, nursery crops, poultry and poultry products, cattle and calves, hogs and pigs, fish and other aquaculture products, and "other livestock and livestock products." Value of sales was also collected for chicken eggs and milk.

FARM CLASSIFICATIONS

Farms by tenure of operator. Farms were classified by tenure of operator on the basis of data reported for land owned, rented from others (including land worked on shares), and managed for others. During the processing operations, each report form was coded to indicate whether the operator was a full owner, part owner, or tenant.

Full owners. Operate only land they own or manage land owned by others on a salary basis.

Part owners. Operate land they own and also land they rent from others.

Tenants. Rent from others or work the land they operate on shares for others.

Farms by age of operator. Enumerators entered the operator's age, as of his/ her last birthday, on the report

form. The computer edit classified the operator's age into one of the following age groups:

| | |
|----------------|-------------------|
| Under 25 years | 45 to 54 years |
| 25 to 34 years | 55 to 64 years |
| 35 to 44 years | 65 years and over |

Farms by size. Farms were classified by size on the basis of the total land area established in each one. According to the census definition, a farm is essentially an operating unit, not an ownership tract. All land operated or managed by one person or partnership represents one farm. In the case of tenants, the land assigned to each tenant is considered a separate farm, even though the landlord may consider the entire landholding to be one unit rather than several separate units.

Farms by market value of agricultural products sold. Farms were classified on the basis of the total market value of agricultural products sold. The total was obtained by adding the reported values of all products sold from the farm. The value of livestock, milk, poultry and eggs, fish, vegetables, fruits and nuts, all field crops, ornamental plants, and all other crops was obtained from the operator at the time of enumeration. The computer edit classified the value of agricultural products sold into one of the following groups:

| | |
|--------------------|--------------------|
| \$100 to \$499 | \$5,000 to \$7,499 |
| \$500 to \$1,199 | \$7,500 to \$9,999 |
| \$1,200 to \$2,499 | \$10,000 or more |
| \$2,500 to \$4,999 | |

RELIABILITY OF DATA

All data compiled in this report originated from a complete enumeration and, therefore, are not subject to sampling variability. However, the data are subject to nonsampling errors. Nonsampling errors can be attributed to many sources: inability to identify all cases in the actual universe; inability or unwillingness on the part of respondents to provide correct information; definition and classification difficulties; differences in the interpretation of questions; errors in recording or coding the data obtained; and other errors of collection, response, coverage, and estimation for missing or misreported data.

The accuracy of these tabulated data is determined by the joint effects of the various nonsampling errors. No direct measures of these effects have been obtained; however, precautionary steps were taken in all phases of data collection, processing, and tabulation of the data in an effort to minimize the effects of nonsampling errors.

Appendix B. **Report Form**

The report form is shown on the following pages.

Publication Program

1992 CENSUS OF AGRICULTURE

Results of the 1992 Census of Agriculture are published in a series of reports that provide data at the national, State, and county (or equivalent) levels for the United States. Data also are available for Puerto Rico, Guam, and the Virgin Islands of the United States.

VOLUME 1. GEOGRAPHIC AREA SERIES (AC92-A-1 TO -54)

National, State, and County Data are published in detailed national and State tables for the United States, and in State and county tables for each State. These reports include data on number and size of farm; crop production; livestock, poultry, and their products; tenure, age, and principal occupation of operator; type of organization; value of products sold; government payments plus market value of agricultural products sold; production expenses; direct marketing; number of hired employees; land use; irrigation; and the standard industrial classification of farms.

U.S. Summary and State Data Report (AC92-A-51)

Chapter 1. National-level data

Chapter 2. State-level data

State and County Data Reports (AC92-A-1 to -50)

Chapter 1. State-level data

Chapter 2. County-level data

Outlying Areas Data (AC92-A-52 to -54) are published for the regions and municipios of Puerto Rico, the election districts on Guam, and the islands of the Virgin Islands of the United States.

VOLUME 2. SUBJECT SERIES (AC92-S-1 TO -5)

Agricultural Atlas of the United States (AC92-S-1) graphically illustrates a profile of the Nation's agriculture at the county level in a series of dot and multicolor pattern maps. The maps provide displays on sizes and types of farms, land use, farm tenure, market value of agricultural products sold, crops harvested, livestock inventories, and other characteristics of farms.

Coverage Evaluation (AC92-S-2) provides national- and regional-level estimates on the completeness of the census, in terms of both the number of farms missed and selected characteristics of those farms.

Ranking of States and Counties (AC92-S-3) ranks the leading States and counties for selected items from the 1992 census. Tables show cumulative percentage of U.S. totals and most include comparative data from the 1987 census.

History (AC92-S-4) provides a detailed description of the planning and conduct of the 1992 Census of Agriculture. It explains the history of the agriculture census, farm definition, data collection and processing, data dissemination, coverage evaluation and research, and the census of agriculture in outlying areas. Also included are facsimiles of the report forms, information sheets, and letters sent to the public.

ZIP Code Tabulations of Selected Items from the 1992 and 1987 Censuses of Agriculture (AC92-S-5) provides tabulations by five-digit ZIP Code for selected items from the 1992 and 1987 censuses. Data items include number of farms, land in farms, farms by size, market value of agricultural products sold by size of sales, livestock inventory, cropland harvested, selected crops, and other data.

VOLUME 3. 1994 FARM AND RANCH IRRIGATION SURVEY (AC92-RS-1)

This report provides data collected from a sample of irrigated farm operations identified in the 1992 Census of Agriculture. Data items include acres irrigated, land use, yields of specified crops, methods of water distribution, quantity of water used by source, expenses, and other irrigation practices. Data are available for each of the 17 Western States, 10 other leading irrigation States, and the 18 water resources regions of the conterminous United States.

PRINTED REPORTS

All of the reports listed above are available as printed reports, except Volume 2, Part 5, ZIP Code Tabulations. To obtain order forms or further information concerning any agriculture census printed reports, write the Bureau of the Census, Agriculture and Financial Statistics Division, Editorial and Information Staff, Washington, DC 20233-8300 or call 1-800-523-3215.

ELECTRONIC PRODUCTS

- **Computer Tapes**—Public-use computer tapes contain the same summary statistics published in the Volume 1 reports.
- **Compact Disc-Read Only Memory (CD-ROM)**—Data from Volume 1, Volume 2 parts 1 and 5, and Volume 3 are available on CD-ROM.
- **Online Access**—Highlights from Volume 1, Volume 2 parts 3 and 5, and Volume 3 are available on the ARI Network^R and on CENDATATM through DIALOG^R and CompuServe^R.

For additional information regarding electronic data products, write the Data User Services Division, Customer Services, Bureau of the Census, Washington, DC 20233-8300 or call 301-763-4100.
