Fruit and Tree Nuts Situation and Outlook Yearbook

Susan Pollack and Agnes Perez

Abstract

Total fruit and tree nut utilized production increased 4 percent in 2004 from the year before due to bigger citrus and tree nut crops. Growers received higher prices for most fruit and tree nut crops, boosting the value of all fruit and tree nut crops by 12 percent in 2004, to \$14.9 billion—the highest value on record. Despite a 4-percent increase in domestic fruit production, U.S. fruit consumption increased only fractionally in 2004 from the previous year, to 285.19 pounds per person, fresh-weight equivalent. The average American consumed 101.97 pounds of fresh fruit and 183.22 pounds (fresh-weight equivalent) of processed fruit. Consumption increased for fresh fruit and fruit juice, but fell for canned, frozen and dried fruit. With record-high imports and large beginning inventories contributing to the boost in total available supplies, U.S. tree nut consumption reached a record high in 2004/05, at 3.58 pounds per person (shelled basis).

Keywords: fruit, tree nuts, noncitrus, citrus, utilized production, crop value, imports, exports, stocks, pack, price, consumption, fresh, frozen, canned, juice, dried.

Summary

Fruit and Tree Nut Production Strong In 2004

Total fruit and tree nut production was 4 percent higher in 2004 than in 2003. A big 2003/04 citrus crop along with record-high tree nut production offset a slightly smaller noncitrus crop. In 2004, the orange crop was up 11 percent from the previous year, and the biggest since 2000. The tangerine and grapefruit crops were also bigger, up 9 and 5 percent respectively. The lemon crop, however, declined 22 percent. The United States no longer has commercial lime production.

The 2004 noncitrus crop was down less than 1 percent from 2003, with utilized production at 16.8 million tons. Among the major noncitrus crops, apple production was the highest in 4 years and peach production was the highest in 7 years. Production was also higher in 2004 for sweet cherries, apricots, figs, strawberries, and kiwifruit. Grape production, on the other hand, which is the biggest noncitrus crop, fell 6 percent from 2003 and was at a 5-year low. Production was also lower in 2004 for pears, tart cherries, Hawaiian pineapples, avocados, nectarines, cranberries, Hawaiian bananas, dates, and papayas. Prune and plum production was the lowest since 1992, and at 325,000 tons, it was less than half the size of the crops for the previous 2 years.

Tree nut production has been growing rapidly throughout the new century and increased 5 percent between 2003 and 2004. While production has been on a declining trend for citrus and noncitrus fruit since 2000, tree nut crops have grown at an average of 9 percent annually over the 4-year period. Increasing domestic demand and strong international demand continue to boost the growth. Although production has shown an upward trend for many of the tree nuts, weather and the alternate-bearing nature of the trees result in up-and-down volume shifts from year to year. In 2004, for example, adverse weather conditions contributed to a smaller almond crop than in 2003, while the alternate-bearing nature of the trees resulted in smaller pecan and hazelnut crops. On an inshell basis, lower production of almonds, pecans, walnuts, and hazelnuts was offset in 2004 by increased production of pistachios and macadamia nuts.

The value of the 2004 fruit and tree nuts crops reached \$14.9 billion, 12 percent above 2003 and the highest on record. The citrus crop was valued at \$2.5 billion, noncitrus at \$8.9 billion, and tree nuts at \$3.5 billion. Although returns were higher for all fruit and tree nut categories, the tree nut industry saw the highest increase in returns, with the value of the crop 42 percent above 2003. In 2004, the noncitrus crop accounted for 60 percent of the total, citrus for another 17 percent, and tree nuts for the remaining 23 percent. The noncitrus and citrus crops share of the total returns was the lowest in more than 10 years. At the same time, the tree nut crops share of the total continued to grow, jumping from just about 12 percent in the late 1990s early 2000s to almost a quarter of the returns in 2004.

Bearing Acreage Continues To Decline for Citrus and Noncitrus Crops, but Not for Tree Nuts

The number of bearing acres planted to citrus and noncitrus trees declined in 2004, as they have since the turn of the century. In 2004, there were 983,600 acres with commercially productive citrus trees, the lowest since 1994 and down 5 percent from 2003. The biggest decline was among grapefruit acreage which fell 11 percent to 114,800 acres. Orange acreage fell 4 percent to 761,400 acres. Despite the decline in orange acreage, oranges still account for about 25 percent of all fruit bearing acreage and still ranked second behind grapes. Lemon, tangelo, tangerine, and Temple acreage also declined between 2003 and 2004. Tangerine acreage, however, declined only fractionally and is expected to increase in the coming years as some Valencia orange acreage in California has been converted to tangerine production.

Noncitrus acreage declined 1 percent between 2003 and 2004, to 2,105,000 acres. While acreage for peaches, pears, sweet cherries, strawberries, avocados, and dates increased in 2004, those increases were offset by declines in acreage for apples, grapes, plums and prunes, apricots, figs, cranberries, and Hawaiian pineapples, bananas, and papayas. Grape acreage accounted for over 30 percent of all fruit bearing acreage over the past 3 years; grape acreage declined 2 percent between 2003 and 2004 to 933,000 acres.

Tree nut acreage continued to increase, as it has since 1996. Between 2003 and 2004, bearing acreage was up 2 percent for hazelnuts and walnuts, up 6 percent higher for pistachio nuts, and unchanged for almonds and macadamia nuts. There is no acreage information for pecans. Almonds accounted for 61 percent of tree nut acreage (excluding pecans), while walnuts accounted for 24 percent. Hazelnuts accounted for 3 percent of the total and macadamia nuts accounted for 2 percent. While almond acreage dominates tree nuts, its share of the total declined slightly from 62 percent in 2001 and 2002. Pistachio nut tree acreage, however, has continued to grow, increasing its share of total acreage from 8 percent in the early 1990s to 10 percent in 2004. While acreage planted to almonds grew rapidly throughout the 1990s, the increase has slowed since 2000, increasing at an average of 3 percent annually. Walnut acreage increased at rate of 2 percent annually, while hazelnut and macadamia nut acreage showed no real growth, each with bearing acreage at or near the same level in 2004 as in 2000. Pistachio acreage, however, has been growing rapidly since 2000, averaging about 6 percent annually.

Growers' Cash Receipts Hit All-Time High in 2004

Total cash receipts by fruit and tree nut growers reached \$15.5 billion in 2004, 15 percent above 2003 and the highest on record. Growers of most commodities received higher returns except for avocados, nectarines, Hawaiian pineapples, and plums and prunes.

At the retail level, higher prices drove the Consumer Price Index (CPI) for fresh fruit up 3 percent in 2004 to 286.8 (1982-84=100). Consumers paid higher prices for Red Delicious apples, Anjou pears, Thompson seedless grapes, grapefruit, and navel and Valencia oranges. Among the fresh fruits surveyed by the Department of

Labor's Bureau of Labor Statistics for the CPI data, only fresh banana and lemon prices declined in 2004.

Fruit Consumption Up Slightly in 2004

U.S. fruit consumption averaged 285.19 pounds per person (fresh-weight equivalent) in 2004, up fractionally from 2003. Americans consumed more fresh and processed noncitrus products in 2004, but reduced their consumption of all citrus fruit. Fresh fruit consumption averaged 101.97 pounds per person, 1 percent higher than in 2003. Noncitrus fruit accounted for 78 percent of all fresh fruit consumption and showed the strongest increase, rising 2 percent to 79.29 pounds per person, the highest in 5 years. At the same time, fresh citrus consumption declined 5 percent to 22.68 pounds per person, the lowest since 1999, when bad weather damaged California's orange crop.

In 2004, processed fruit consumption averaged 183.22 pounds per person (fresh-weight equivalent), up marginally from 2003. Processed fruit includes juices, canned, frozen, and dried fruit. While consumption of processed noncitrus products rose 1 percent in 2004 to 99.37 pounds per person, consumption of processed citrus products, mostly juice, remained almost unchanged from the previous year at 83.84 pounds per person.

Fresh fruit: Fresh fruit consumption rose 1 percent in 2004 to 101.97 pounds per person, the highest on record. Increased consumption of fresh apples, grapefruit, tangerines/tangelos, avocados, blueberries, cherries, cranberries, table grapes, kiwifruit, papayas, and strawberries offset declines in consumption of fresh oranges, lemons, limes, bananas, mangos, peaches and nectarines, pears, pineapples, and plums and prunes.

Americans still consume more bananas than any other fresh fruit. Banana consumption, however, dropped to 25.76 pounds per person in 2004, down 1 percent from 2003, the second straight year that consumption declined. Even with that decline, Americans still consume more bananas than all citrus fruit combined.

Fresh apples remained America's second favorite fresh fruit. Their consumption was very strong in 2004, increasing 10 percent from the previous year due to big crops from the top two producers, Washington and New York. Apples accounted for almost a quarter of all fresh noncitrus fruit consumption.

Fresh oranges still ranks third among all fresh fruit, and number 1 among all fresh citrus, despite a 10-percent decline between 2003 and 2004. A 19-percent smaller orange crop in California in 2003/04, where most of the fresh-market oranges are produced, drove consumption down.

For the first time in 2004, there was a slight downturn in tropical fruit consumption. After many years of growth, mango consumption fell 2 percent to 2.01 pounds per person, still the second highest mango consumption on record. Pineapple consumption also declined slightly in 2004 by 1 percent to 4.33 pounds per person. Papaya consumption, however, grew 18 percent to 1.03 pounds.

Canned fruit: Canned fruit consumption averaged 14.77 pounds per person in 2004 (product-weight equivalent). Since there are no stock data for canned fruit, consumption data appear on a cyclical basis. Consumption for 2003 and 2004 averaged 14.89 pounds per person, down 2 percent from the previous 2-year cycle, 2001-2002.

Peaches are the number one canned fruit consumed in the United States. On average, canned peaches account for about 29 percent of all canned fruit consumption. While 2004 canned peach consumption rose 6 percent from 2003, it was 7-percent below 2002. When examined on a 2-year basis to take into account missing inventory data, canned peach consumption has been trending downward since the late 1990s.

Canned apple consumption, including apple sauce, averaged 3.57 pounds per person in 2004, down 1 percent from 2003 but up 12 percent from 2002. Canned apples rank second in canned fruit consumption. On a 2-year average basis, consumption during 2003/04-2004/05 was 5 percent higher than 2001/02-2002/03.

Consumption of canned olives, after slight increases in previous years, appears to have taken a downward turn over the last 2 years. During that period, olive consumption averaged 1.39 pounds per person, down 3 percent from the previous 2-year period (2001/02-2002/03), but 7 percent higher than in 1995/96-1996/97.

Frozen fruit: Per capita consumption of frozen fruit declined 7 percent in 2004 from the previous year, averaging 3.89 pounds (processed weight). Increased consumption of cherries and apricots was offset by decreased consumption of berries, apples, and peaches. Berries accounted for 59 percent of all frozen fruit consumed in 2004. Frozen strawberry consumption fell 11 percent to 1.73 pounds per person, likely due to the greater consumption of fresh strawberries.

Dried fruit: In 2004, dried fruit consumption declined to the lowest amount in at least the last 20 years, averaging 2.29 pounds per person (processed weight), 5 percent less than in 2003. Consumption rose for dried apples and figs but declined for apricots, dates, prunes (dried plums), and raisins. Dried peach consumption in 2004 remained unchanged from 2003. Raisin consumption, which accounted for 63 percent of all dried fruit consumed in 2004, fell 1 percent to 1.44 pounds per person. Prune consumption accounted for 16 percent of all dried fruit consumed, down from 18 percent in 2003. In 2004, Americans consumed on average 0.37 pound of prunes per person, 16 percent less than in 2003. A 74-percent drop in the production of plums dried for prunes drove down the available supply. Dried apricot consumption fell 23 percent between 2003 and 2004. Although the production of domestic apricots used for drying was up 81 percent in 2004, most dried apricots consumed in the United States are imported. In 2004, imports fell 31 percent, reducing supplies by 26 percent.

Fruit juice: Americans drank 2 percent less fruit juice in 2004/05 than in 2003/04, consuming 8.2 gallons per person, the smallest amount since 1991/92. While consumption of orange and grapefruit juice declined, consumption of apple juice rose. While orange juice continues to be the number one fruit juice consumed in the United States, consumption has been declining in recent years. In the late 1990s, orange juice accounted for two-thirds of all fruit juice consumption. In 2003 and 2004, its share had fallen below 60 percent. In the past few seasons, ample

production, coupled with weak demand, drove up juice stocks. In 2004/05, despite all-time-high beginning stocks, a decline in production of orange juice due to a hurricane-shortened Florida oranges crop, reduced consumption by 3 percent to an average of 4.77 gallons per person. Grapefruit juice consumption fell 37 percent and has been on the decline since the turn of the century. In 2004/05, Americans consumed an average of 0.24 gallon of grapefruit juice, about half the amount they drank in 2000/01. While orange and grapefruit juice consumption declined in 2004/05, consumption of lemon juice increased and lime juice remained unchanged. The United States is increasingly reliant on imported lemon juice to meet consumer demand. Most of the lemons produced domestically go to fresh use, where growers receive higher returns. All lime juice is imported, since there is no longer a domestic lime industry. With increased demand for both of these juices, especially as ingredients for other drinks such as sodas, imports rose in 2004/05.

Although total citrus juice consumption declined in 2004/05, total noncitrus juice consumption rose 3 percent. Prune and cranberry juice consumption remained at the same level as the preceding two seasons, and grape and pineapple juice consumption fell. On the other hand, apple juice consumption increased 10 percent, the third straight year of increased demand. Both domestic production and imports were higher in 2004/05, providing sufficient supplies to meet demand.

Tree nuts: Tree nut consumption rose 5 percent to 3.58 pounds per person in 2004/05, another record year. Americans ate more walnuts, pistachio nuts, macadamia nuts, hazelnuts, and other nuts--mostly imports such as cashews, Brazil nuts, and pine nuts. Almond and pecan consumption both fell due to adverse weather conditions affecting the almond crop and an off year in the alternate bearing cycle of the pecan crop. While most of the major, domestically produced tree nut crops are exported, Americans are increasing their consumption of the different variety of nuts as more evidence points to their health benefits. Increased nut consumption can also be attributed to the expanding variety of foods Americans are eating, some dishes using nuts as ingredients in cooking, as well as the traditional use of nuts in baking, confections, and other dessert-type foods.

GLOSSARY OF TERMS

Brix: The concentration of soluble solids in juice, mostly sugar, but also includes salts, protein, and acid content. The denser the juice the higher the degrees Brix. For example: frozen concentrated orange juice is stored and often shipped at 66° Brix, reconstituted with water to 42° Brix and canned for retail sale in the popular 8- to 16-ounce cans found in the freezers at retail level, and further reconstituted to 11.8° Brix for consumption. Juice in its natural state, not-from concentrate orange juice, is at 11.8° Brix.

Cash receipts: The value of commodity marketings during the calendar year, irrespective of the year of production. For program crops, also includes net CCC loans (there are none for fruit and tree nuts).

C.I.F. value: (Cost, insurance, and freight). Terms of sale whereby the seller's (exporter) price includes the cost of the goods being sold and all transportation charges, including insurance expenses, to the destination point (importer).

Constant 1996 dollars: Expression of value in terms of 1996 purchasing power. Frequently referred to as deflated or real dollars.

Cwt: Abbreviation for hundredweight, a unit of measure equal to 100 pounds.

Dumping: The sale of a commodity in a foreign market at less than fair market value.

Equivalent on-tree returns: Citrus price calculated at the on-tree level by deducting the costs of hauling, picking, sorting, grading, packing, cooling, marketing, and other costs from the base price growers receive at the processing plant or packinghouse door. In some cases, this results in negative returns.

Farm weight: The raw or unprocessed weight of a product in fresh form prior to any processing; also called fresh-weight, field-run, or orchard-run.

F.A.S. value: (free alongside ship). A price quotation that includes all costs of transportation and delivery of the goods to the dock alongside the ship (within reach of the ship's tackle).

F.o.b. shipping-point price: The average, unweighted unit price received by the shipper or grower-shipper primarily for sales in carload or truckload quantities, but also including mixed loads.

Fresh-market fruit: Sold primarily as fresh.

Grower price: The average price received by producers from the first level of sales for the commodity, also called returns to grower. The grower price includes all grades and qualities. For citrus fruit, the grower price is the equivalent on-tree price or return.

Hectoliter: A liquid unit of measure equal to 26.41721 gallons (single-strength equivalent). A hectoliter equals 100 liters.

Loss and exempt: The difference between total production and marketable production. Production not used for human consumption due to poor quality or use of the product for industrial purposes, such as crushing nuts for oil, or for animal feed.

Liter: A liquid unit of measure equal to 0.2641721 gallons (single-strength equivalent).

Marketing spread: The difference between the retail price and the grower return.

Marketing year: A 12-month period beginning the month when harvesting of a crop normally begins. Marketing years vary by commodity.

Metric ton: A unit of measure equal to 2,204.623 pounds or 1.102311 short tons. A metric ton of orange juice is stored at 65° Brix. To convert to single-strength equivalent, the number of tons is multiplied by 1,405.88.

Pack: The quantity of fresh or processed product placed in containers (e.g., cans). Generally referred to as the output of a processing industry (e.g., frozen pack of concentrated orange juice).

Packinghouse door price: The price growers receive for their fruit when delivered to the packinghouse (the price before costs are deducted).

Per capita use (consumption): A measure of commodity disappearance on a per-person basis. Equal to total supply (production plus imports, plus beginning stocks) less use (exports, shrink and loss, and ending stocks) divided by total U.S. population (including military).

Processing fruit: Commodities sold primarily to processors; include (but not limited to) oranges, grapefruit, lemons, grapes, apples, apricots, cherries, peaches, plums, pears, pineapple, blueberries, strawberries, raspberries, cranberries, and olives.

Product weight: The weight of a product in its final packaged form, for example, the weight of the contents of a can of peaches.

Pounds solids: The total dissolved solids in oranges, usually measured as pounds solids per box. In Florida, payments for oranges sold for juice are based on the pounds solids per box, calculated by multiplying the amount of juice per box of oranges by the Brix level of the juice.

Retail price: The average price consumers pay for a product at the retail level—grocery stores, supermarkets, convenience stores.

Season-average price: Average price received by the grower, weighted by quantity marketed.

Shipments: Quantity of produce marketed from major production areas.

Single-strength equivalent: A measure for juice in its consumable form. Juice at 11.8° Brix.

Short ton: A unit of measure equal to 2,000 pounds.

Tree nuts: Hard shelled dried fruit or seed with separable rind or shell and edible kernels that grow on trees. Tree nut varieties grown for commercial production in the United States include: almonds, hazelnuts, macadamia nuts, pecans, pistachio nuts, and walnuts.

Tropical fruit: Fruit grown in tropical climates, limited in the United States to southern Florida, California, and Hawaii; includes bananas, pineapple, guavas, papayas, mangoes.

Value of production: The value of commodities produced during the crop year. Calculated as production times the marketing year average price. May be equal to cash receipts when the crop year for the fruit runs from January through December.

CONVERSION FACTORS

1 metric ton = 1.102311 short tons

1 metric ton = 2,204.623 pounds

1 metric ton = 1,000 kilograms

1 kilogram = 2.204623 pounds

1 gallon single-strength equivalent = 11.8° Brix

1 liter = 0.2641721 single-strength equivalent (sse) gallons

1 hectoliter = 26.41721 sse gallons

1 hectoliter = 100 liters

Frozen concentrated orange juice:

1 gallon 42° Brix = 4.0389 sse gallons

1 metric ton at 65° Brix = 1,405.88 sse gallons

Frozen concentrated grapefruit juice:

1 gallon 40° Brix = 3.81341 sse gallons

CITRUS FRUIT

Grapefruit:

C-1.	Grapefruit: Bearing acreage and yield per acre, by State, 1980/81 to date	74
C-2.	Grapefruit: Production, by State, 1980/81 to date	75
C-3.	Grapefruit: Utilization of production, by State, 1980/81 to date	76
C-4.	Grapefruit: Equivalent-on-tree returns, by State, 1980/81 to date	77
C-5.	All grapefruit: Monthly equivalent-on-tree returns received by growers, Arizona, 1980/81 to date.....	78
C-6.	All grapefruit: Monthly equivalent-on-tree returns received by growers, California, 1980/81 to date.....	79
C-7.	All grapefruit: Monthly equivalent-on-tree returns received by growers, Florida, 1980/81 to date	80
C-8.	All grapefruit: Monthly equivalent-on-tree returns received by growers, Texas, 1980/81 to date	81
C-9.	All grapefruit: Monthly equivalent-on-tree returns received by growers, United States, 1980/81 to date	82
C-10.	Grapefruit processed, Florida, 1980/81 to date	83
C-11.	Frozen concentrated grapefruit juice: Processors' stocks, pack supplies, and movement, Florida, 1980/81 to date.....	84
C-12.	Chilled grapefruit juice: Processors' stocks, pack supplies, and movement, Florida, 1985/86 to date	85

Lemons:

C-13.	Lemons: Acreage, yield per acre, and production, by State, 1980/81 to date	86
C-14.	Lemons: Utilization of production, by State, 1980/81 to date	87
C-15.	All lemons: Equivalent-on-tree returns, by State, 1980/81 to date	88
C-16.	All lemons: Monthly equivalent-on-tree returns received by growers, Arizona, 1980/81 to date.....	89
C-17.	All lemons: Monthly equivalent-on-tree returns received by growers, California, 1980/81 to date	90
C-18.	All lemons: Monthly equivalent-on-tree returns received by growers, United States, 1980/81 to date	91

Oranges:

C-19.	Oranges: Bearing acreage and yield per acre, by State, 1980/81 to date	92
C-20.	Oranges: Production, by State, 1980/81 to date	93
C-21.	Oranges: Utilization of production, by State, 1980/81 to date	94
C-22.	All oranges: Equivalent-on-tree returns, by State, 1980/81 to date	95
C-23.	All oranges: Monthly equivalent-on-tree returns received by growers, Arizona, 1980/81 to date.....	96
C-24.	All oranges: Monthly equivalent-on-tree returns received by growers, California, 1980/81 to date	97
C-25.	All oranges: Monthly equivalent-on-tree returns received by growers, Florida, 1980/81 to date	98
C-26.	All oranges: Monthly equivalent-on-tree returns received by growers, Texas, 1980/81 to date.....	99
C-27.	All oranges: Monthly equivalent-on-tree returns received by growers, United States, 1980/81 to date	100
C-28.	Oranges processed: Florida, 1980/81 to date.....	101
C-29.	Frozen concentrated orange juice: Canners' stocks, pack, supplies, and movement, Florida, 1980/81 to date.....	102
C-30.	Chilled orange juice: Processors' stocks, pack, supplies, and movement, Florida, 1985/86 to date	103

BERRIES**Blackberries:**

D-1.	Blackberries: Commercial acreage, yield per acre, production, and season-average grower price, Oregon and Washington, various years to date	104
------	---	-----

Blueberries:

D-2.	Blueberries: Commercial acreage, yield per acre, production, and season-average grower price, by State, various years to date	105
------	---	-----

Boysenberries and loganberries:

D-3.	Boysenberries and loganberries: Commercial acreage, yield per acre, production, and season-average grower price, California and Oregon, various years to date	109
------	---	-----

Black raspberries:

D-4.	Black raspberries: Commercial acreage, yield per acre, production, and season-average grower price, Oregon and Washington, 1980 to date	111
------	---	-----

Red raspberries:

D-5.	Red raspberries: Commercial acreage, yield per acre, production, and season-average grower price, Oregon and Washington, 1980 to date	112
------	---	-----

Raspberries:

D-6.	Raspberries: Acreage harvested, yield per acre, utilized production, grower price, and value, California, 1992 to date	113
------	--	-----

Cranberries:

D-7.	Cranberries: Acreage harvested, yield per acre, production, utilization, season-average grower price, and value, United States, 1980 to date	114
------	--	-----

Strawberries:

D-8.	Strawberries: Acreage, production, season-average grower price, and value, United States, 1980 to date	115
D-9.	Strawberries, fresh market and processing: Production, season-average grower price, and value, United States, 1980 to date	116
D-10.	Strawberries, fresh: Monthly prices received by growers, United States, 1980 to date	117

TREE NUTS**General:**

E-1.	All tree nuts: Bearing acreage, United States, 1980/81 to date	118
E-2.	All tree nuts: Gross return per bearing acre, United States, 1980/81 to date	119
E-3.	All tree nuts: Utilized production (shelled basis), United States, 1980/81 to date	120
E-4.	All tree nuts: Season-average grower prices received, United States, 1980/81 to date	121
E-5.	All tree nuts: Value of production, United States, 1980/81 to date	122
E-6.	All tree nuts (shelled basis): Supply and utilization, United States, 1980/81 to date	123

Almonds:

E-7.	Almonds: Acreage, yield per acre, production (shelled basis), season-average grower price, and value, California 1980 to date	124
E-8.	Almonds: Supply and utilization (shelled basis), 1980/81 to date	125

Hazelnuts:

E-9.	Hazelnuts (filberts): Bearing acreage and yield per acre (in-shell), by State, 1980 to date	126
E-10.	Hazelnuts (filberts): Production (in-shell), season-average grower price, and value, by State, 1980 to date	127
E-11.	Hazelnuts (filberts): Supply and utilization (shelled basis), 1980/81 to date	128

Macadamia nuts:

E-12.	Macadamia nuts: Acreage, yield per acre, production (in-shell), season-average grower price, and value, Hawaii, 1980 to date	129
-------	--	-----

Pecans:

E-13.	Pecans: Production (in-shell), season-average grower price, and value, United States, 1980 to date	130
E-14.	Pecans: Supply and utilization (shelled basis), 1980/81 to date	131

Pistachios:

E-15.	Pistachios: Production (in-shell), season-average grower price, and value, California, 1980 to date	132
E-16.	Pistachios: Supply and utilization (shelled basis), 1980/81 to date	133

Walnuts:

E-17.	Walnuts (English): Production (in-shell), season-average grower price, and value, California, 1980 to date	134
-------	--	-----

E-18.	Walnuts: Supply and utilization (shelled basis), 1980/81 to date.....	135
-------	---	-----

PER CAPITA CONSUMPTION

F-1.	Fresh apples: Supply and utilization, 1980/81 to date.....	136
F-2.	Fresh bananas: Supply and utilization, 1980 to date	137
F-3.	Fresh blueberries: Supply and utilization, 1980 to date	138
F-4.	Fresh grapes: Supply and utilization, 1980/81 to date.....	139
F-5.	Fresh kiwifruit: Supply and utilization, 1985 to date	140
F-6.	Fresh mangos: Supply and utilization, 1980 to date.....	141
F-7.	Fresh papayas: Supply and utilization, 1980 to date	142
F-8.	Fresh peaches and nectarines: Supply and utilization, 1980 to date....	143
F-9.	Fresh pears: Supply and utilization, 1980/81 to date.....	144
F-10.	Fresh strawberries: Supply and utilization, 1980 to date.....	145
F-11.	Fresh grapefruit: Supply and utilization, 1980/81 to date	146
F-12.	Fresh lemons: Supply and utilization, 1980/81 to date.....	147
F-13.	Fresh limes: Supply and utilization, 1980/81 to date	148
F-14.	Fresh oranges: Supply and utilization, 1980/81 to date.....	149
F-15.	Fresh tangerines and tangelos: Supply and utilization, 1980/81 to date	150
F-16.	Canned apples: Supply and utilization, 1980/81 to date.....	151
F-17.	Canned apricots: Supply and utilization, 1980/81 to date	152
F-18.	Canned cherries, sweet: Supply and utilization, 1980/81 to date	153
F-19.	Canned cherries, tart: Supply and utilization, 1980/81 to date.....	154
F-20.	Canned olives: Supply and utilization, 1980/81 to date	155
F-21.	Canned peaches: Supply and utilization, 1980/81 to date	156
F-22.	Canned pears: Supply and utilization, 1980/81 to date	157
F-23.	Canned pineapples: Supply and utilization, processed- weight basis, 1980 to date	158
F-24.	Canned plums: Supply and utilization, 1980/81 to date	159
F-25.	Apple juice and cider: Supply and utilization, 1980/81 to date.....	160
F-26.	Grapefruit juice: Supply and utilization, 1980/81 to date.....	161
F-27.	Orange juice: Supply and utilization, 1985/86 to date	162
F-28.	Pineapple juice: Supply and utilization, 1980 to date.....	163
F-29.	Dried plums (prunes): Supply and utilization, 1980/81 to date.....	164
F-30.	Raisins: Supply and utilization, 1980/81 to date	165
F-31.	Fresh fruit: Per capita consumption, 1980 to date	166
F-32.	Canned fruit: Per capita consumption, product-weight basis, 1980/81 to date	167
F-33.	Frozen fruit: Per capita consumption, product-weight basis, 1980 to date	168
F-34.	Dried fruit: Per capita consumption, product-weight basis, 1980/81 to date	169
F-35.	Selected fruit juices: Per capita consumption, 1980/81 to date	170
F-36.	Apples: Per capita utilization adjusted for imports and exports, fresh-weight equivalent, by product, 1980/81 to date	171
F-37.	Grapes: Per capita utilization adjusted for imports and exports, fresh-weight equivalent, by product, 1980/81 to date.....	172
F-38.	Total U.S. population	173
F-39.	Fresh and processed fruit: Per capita utilization adjusted for imports and exports, fresh-weight equivalent, 1980 to date.....	174

F-40.	Per capita consumption of selected noncitrus fruit, fresh-weight equivalent, 1980/81 to date.....	175
F-41.	Per capita consumption of citrus fruit, fresh-weight equivalent, 1980/81 to date.....	176
F-42.	Selected fruit: Per capita consumption, fresh-weight equivalent, 1980 to date.....	177
F-43.	Tree nuts (shelled basis): Per capita consumption, 1980/81 to date	178

TRADE

General:

G-1.	Volume of U.S. imports of selected commodities from top countries, 1994-2004	179
G-2.	Volume of U.S. exports of selected commodities to top countries, 1994-2004	184

Fruit:

G-3.	U.S. fresh-market fruit imports, monthly, 2004	188
G-4.	U.S. fresh-market fruit imports, monthly, 2003	189
G-5.	U.S. fresh-market fruit imports, monthly, 2002	190
G-6.	U.S. fresh-market fruit exports, monthly, 2004.....	191
G-7.	U.S. fresh-market fruit exports, monthly, 2003.....	192
G-8.	U.S. fresh-market fruit exports, monthly, 2002.....	193

Fruit juice:

G-9.	U.S. fruit juice trade, monthly, 2004	194
G-10.	U.S. fruit juice trade, monthly, 2003	195
G-11.	U.S. fruit juice trade, monthly, 2002	196

Table A-1--U.S. per capita use of selected, commercially produced, fresh, and processing fruits and tree nuts, 1976-2004 1/

Crop	1976	1977	1978	1979	1980	1981	1982	1983	1984	1985

1/ Data may not match other tables due to rounding. Year reflects end of harvest for citrus and beginning year of harvest for noncitrus. 2/ Includes tangerines, tangelos, other mandarins, and limes. 3/ Includes nectarines. 4/ Includes small quantities of dried and other processed products. 5/ Includes apricots, blueberries, cranberries, kiwifruit, mangoes, papayas, and plums and prunes. 6/ Includes apricots and plums and prunes. 7/ Includes blackberries, blueberries, raspberries, boysenberries, loganberries, and apricots. 8/ Includes prunes and cranberries. Estimates for cranberries begin in 1989. 9/ Includes apricots, dates, figs, peaches, pears, and plums and prunes. 10/ Shelled basis. 11/ Includes hazelnuts, macadamias, pistachios, Brazil nuts, cashews, and mixed nuts.

1/ Beginning in 1990, data are an average of canned fruit and canned juice.

2/ Beginning in 1991, data are only for frozen juice. As of 2003, data are for frozen noncarbonated juices and drinks.

3/ Beginning in 1991, processed fruit includes canned and dried fruit.

4/ Data no longer available.

1/ National Agricultural Statistics Service (NASS) began reporting "limited" and "undersized" as separate categories in 1990 and made estimates for 1988 and 1989. All data since 1988 are as reported by NASS. 2/ Mostly canned, except for 1980 when use of limited-size fruit in canned ripe olives was not permitted. Reported by California Olive Committee for 1976 to 1987. 3/ "Limited and undersized" reported by NASS, minus "limited size" reported by California Olive Committee for 1976 to 1987. Includes undersized and culls.

Sources: National Agricultural Statistics Service, USDA, and California Olive Committee.

N.A.= Not available. 1/ Small quantities of processed blueberries are included in fresh to avoid disclosure of individual operations. 2/ Maine produces wild blueberries, other States cultivated. Beginning in 1988, data for wild blueberries are from the New England Agricultural Statistics Service. Data prior to 1988 are from the North American Blueberry Council. 3/ Includes small amounts from Indiana prior to 1992.

Sources: New England Agricultural Statistics Service, Oregon Agricultural Statistics Service, Oregon Dept. of Agriculture; Washington Agricultural Statistics Service, State of Washington Dept. of Agriculture; North American Blueberry Council; National Agricultural Statistics Service, USDA.

1/ Conversion factors from in-shell to shelled basis varies year to year for production, stocks, and exports, and were 0.41 in 1996/97, 1997/98, and 1998/99, 0.42 in 1999/2000, 0.43 in 2000/01, 0.42 in 2001/02, and 0.43 in 2002/03, 2003/04, and 2004/05. For imports, the conversion factor was a constant 0.35.

2/ Season begins August 1. 3/ Inedibles and noncommercial usage. 4/ Utilized production minus loss and exempt. 5/ Bureau of Census, U.S. Department of Commerce. 6/ Walnut Marketing Board. 7/ Marketable production plus imports and beginning stocks. 8/ Preliminary estimates.

N.A.= Not available.

1/ All noncitrus fruit data are on calendar-year basis, except for apples (year begins in August of the year shown), grapes (since 1990, year begins in May; prior to 1990, year begun in July), and pears (year begins in July). For oranges, Temples, tangerines, and tangelos, years begin in November, grapefruit in September, and lemons in August of the prior year. Lime year begins in April of the year shown. 2/ Some figures may not add due to rounding. 3/ Preliminary.
