The interpretation for camp areas evaluates the following soil properties at variable depths in the soil: flooding; ponding; wetness; slope; depth to bedrock; depth to a cemented pan; fragments less than, equal to, or more than 3 inches in size; sodium content (SAR); salinity (EC); a clayey surface layer; Unified classes for a high content of organic matter (PT, OL, and OH); soil dustiness; and permeability (Ksat) that is too rapid, allowing seepage in some climates.

The interpretation for picnic areas evaluates the following soil properties at variable depths in the soil: flooding, ponding, wetness, slope, depth to bedrock, depth to a cemented pan, salinity (EC), pH, soil dustiness, fragments more than 3 inches in size, surface fragments more than 10 inches in size, the amount of sand or clay in the surface layer, Unified classes for a high content of organic matter (PT, OL, and OH), and permeability (Ksat) that is too rapid, allowing seepage in some climates.

The interpretation for playgrounds evaluates the following soil properties at variable depths in the soil: flooding, ponding, wetness, slope, depth to bedrock, depth to a cemented pan, surface fragments more than 10 inches in size, fragments equal to or less than 3 inches in size, Unified classes for a high content of organic matter (PT, OL, and OH), soil dustiness, sand or clay content in the surface layer, pH, salinity (EC), and permeability (Ksat) that is too rapid, allowing seepage in some climates.

Table 15b.--Recreational Development

(The information in this table indicates the dominant soil condition but does not eliminate the need for onsite investigation. The numbers in the value columns range from 0.01 to 1.00. The larger the value, the greater the potential limitation. The rating is based on the limitation with the highest value. Only the three highest value limitations are listed. There may be more limitations. Fine-earth fractions and coarse fragments are reported on a weight basis. An explanation of the rating criteria and of the abbreviations used in describing the limitations is given at the end of the table)

Water	100	Not rated		Not rated		Not rated	

The interpretation for paths and trails evaluates the following soil properties at variable depths in the soil: flooding; ponding; wetness; slope; fragments less than, equal to, or more than 3 inches in size; clay and sand content in the surface layer; surface fragments more than or equal to 10 inches in size; Unified classes for a high content of organic matter (PT, OL, and OH); soil dustiness; and the hazard of water erosion.

The interpretation for off-road motorcycle trails evaluates the following soil properties at variable depths in the soil: flooding; ponding; wetness; slope; soil dustiness; fragments less than, equal to, or more than 3 inches in size; sand or clay content in the surface layer; and Unified classes for a high content of organic matter (PT, OL, and OH).

The interpretation for lawns, landscaping, and golf fairways evaluates the following soil properties at variable depths in the soil: flooding; ponding; wetness; slope; depth to bedrock; depth to a cemented pan; fragments less than, equal to, or more than 3 inches in size; Unified class for a high content of organic matter (PT, OL, and OH); soil dustiness; sand or clay content in the surface layer; surface fragments more than or equal to 10 inches in size; pH; salinity (EC); sodium content (SAR); calcium carbonates; and sulfur content.

Table 16a.--Building Site Development

(The information in this table indicates the dominant soil condition but does not eliminate the need for onsite investigation. The numbers in the value columns range from 0.01 to 1.00. The larger the value, the greater the potential limitation. The rating is based on the limitation with the highest value. Only the three highest value limitations are listed. There may be more limitations. Fine-earth fractions and coarse fragments are reported on a weight basis. An explanation of the rating criteria and of the abbreviations used in describing the limitations is given at the end of the table)

Water	100	Not rated		Not rated		Not rated	

The interpretation for dwellings without basements evaluates the following soil properties, some at variable depths in the soil: flooding, ponding, wetness, slope, subsidence of organic soils, shrink-swell expressed as linear extensibility percent (LEP), organic Unified classes for low soil strength (PT, OL, and OH), depth to hard or soft bedrock, depth to a thick or thin cemented pan, and fragments more than 3 inches in size.

The interpretation for dwellings with basements evaluates the following soil properties, some at variable depths in the soil: flooding, ponding, wetness, slope, subsidence of organic soils, shrink-swell potential expressed as linear extensibility percent (LEP), organic Unified classes for low strength (PT, OL, and OH), depth to hard or soft bedrock, depth to a thick or thin cemented pan, and fragments more than 3 inches in size.

The interpretation for small commercial buildings evaluates the following soil properties, some at variable depths in the soil: flooding, ponding, wetness, slope, subsidence of organic soils, shrink-swell potential expressed as linear extensibility percent (LEP), depth to hard or soft bedrock, depth to a thick or thin cemented pan, and fragments more than 3 inches in size.

Table 16b.--Building Site Development

(The information in this table indicates the dominant soil condition but does not eliminate the need for onsite investigation. The numbers in the value columns range from 0.01 to 1.00. The larger the value, the greater the potential limitation. The rating is based on the limitation with the highest value. Only the three highest value limitations are listed. There may be more limitations. Fine-earth fractions and coarse fragments are reported on a weight basis. An explanation of the rating criteria and of the abbreviations used in describing the limitations is given at the end of the table)

Water	100	Not rated		Not rated	

The interpretation for local roads and streets evaluates the following soil properties at variable depths in the soil: flooding, ponding, wetness, slope, organic Unified classes for low soil strength (PT, OL, and OH), amount of clay, depth to hard or soft bedrock, depth to a thick or thin cemented pan, fragments more than 3 inches in size, bulk density, and the caving potential of the soil.

The interpretation for shallow excavations evaluates the following soil properties at variable depths in the soil: flooding, ponding, wetness, slope, subsidence of organic soils, shrink-swell potential expressed as linear extensibility percent (LEP), potential for frost action, depth to hard or soft bedrock, depth to a thick or thin cemented pan, fragments more than 3 inches in size, and soil strength expressed as the AASHTO group index number (AASHTO GI).

Table 17a.--Sanitary Facilities

(The information in this table indicates the dominant soil condition but does not eliminate the need for onsite investigation. The numbers in the value columns range from 0.01 to 1.00. The larger the value, the greater the potential limitation. The rating is based on the limitation with the highest value. Only the three highest value limitations are listed. There may be more limitations. Fine-earth fractions and rock fragments are reported on a weight basis. An explanation of the rating criteria and of the abbreviations used in describing the limitations is given at the end of the table)

Table 17a.--Sanitary Facilities--Continued

Map symbol and component name	Pct. of map unit	Septic tank absorption fields		Sewage lagoons	
		Limitations	Value	Limitations	Value
W:					
Water	100	Not rated		Not rated	

The interpretation for septic tank absorption fields evaluates the following soil properties at variable depths in the soil: flooding; ponding; wetness; slope; subsidence of organic soils; depth to hard or soft bedrock; depth to a cemented pan; permeability that is too rapid, allowing seepage; and permeability that is too slow or an impermeable layer at a shallow depth.

The interpretation for sewage lagoons evaluates the following soil properties at variable depths in the soil: flooding, ponding, wetness, slope, organic Unified classes for low strength (PT, OL, and OH), depth to hard or soft bedrock, depth to a cemented pan, fragments larger than 3 inches in size, and permeability that is too rapid, allowing seepage.

Table 17b.--Sanitary Facilities

(The information in this table indicates the dominant soil condition but does not eliminate the need for onsite investigation. The numbers in the value columns range from 0.01 to 1.00. The larger the value, the greater the potential limitation. The rating is based on the limitation with the highest value. Only the three highest value limitations are listed. There may be more limitations. Fine-earth fractions and coarse fragments are reported on a weight basis. An explanation of the rating criteria and of the abbreviations used in describing the limitations is given at the end of the table)

The interpretation for trench sanitary landfill evaluates the following soil properties at variable depths in the soil: flooding, ponding, wetness, slope, depth to hard or soft bedrock, depth to a thick or thin cemented pan, fragments 3 to 10 inches in size, sodium content (SAR), pH, clayey or sandy textures, and permeability that is too rapid, allowing seepage in some climates.

The interpretation for area sanitary landfill evaluates the following soil properties at variable depths in the soil: flooding, ponding, wetness, slope, depth to bedrock, depth to a cemented pan, and permeability that is too rapid, allowing seepage in some climates.

The interpretation for daily cover for landfill evaluates the following soil properties at variable depths in the soil: ponding; wetness; slope; depth to bedrock; depth to a cemented pan; fragments more than, equal to, or less than 3 inches in size; Unified class for peat (PT); Unified classes for packing (OL, OH, CH, and MH); sandy or clayey textures; pH; carbonates; sodium content (SAR); salinity (EC); soil climate; kaolinitic mineralogy; and permeability that is too rapid, allowing seepage.

Table 18a.--Construction Materials

(The information in this table indicates the dominant soil condition but does not eliminate the need for onsite investigation. The numbers in the value columns range from 0.00 to 0.99. The closer the value is to 0.00, the greater the limitation. A value of 0.00 indicates an absolute limitation based on the soil property criteria used to develop the interpretation. Values closer to 1.00 indicate lesser limitations. Limiting features with values of 1.00 have absolutely no limitation and are not shown in the table. Rating classes are determined by the most limiting value. Fine-earth fractions and coarse fragments are reported on a weight basis. An explanation of the criteria and of the abbreviations used in describing the limitations is given at the end of the table)

		Rating class and limiting features	Value	Rating class and limiting features	Value	Rating class and limiting features	Value
W:							
Water	100	Not rated		Not rated		Not rated	

The interpretation for gravel evaluates the content of coarse fragments more than .2 inch in size in the bottom or thickest layer of the soil.

The interpretation for sand evaluates the amount of sand and fine gravel in the thickest or bottom layer of the soil. Organic soil layers with the Unified engineering class for peat (PT) also are evaluated.

The interpretation for topsoil evaluates the following soil properties at various depths: calcium carbonates, clay content, bulk density, sand content, soil wetness, fragments .2 inch to more than 3 inches in size, content of organic matter (OM), sodium content expressed as the sodium adsorption ratio (SAR), salinity expressed as dS/m of electrical conductivity (EC), depth to bedrock, slope, and pH.

Table 18b.--Construction Materials

(The information in this table indicates the dominant soil condition but does not eliminate the need for onsite investigation. The numbers in the value columns range from 0.00 to 0.99. The closer the value is to 0, the greater the limitation. A value of 0.00 indicates an absolute limitation based on the soil property criteria used to develop the interpretation. Values closer to 1.00 indicate lesser limitations. Features with a value of 1.00 have absolutely no limitation and are not shown in the table. Rating classes are determined by the most limiting value. Fine-earth fractions and coarse fragments are reported on a weight basis. An explanation of the rating criteria and of the abbreviations used in describing the limitations is given at the end of the table)

Water	100	Not rated		Not rated	

The interpretation for reclamation material evaluates the following soil properties at variable depths in the soil: the amount of sand, clay, and fragments; the content of organic matter (OM); the wind erodibility group (WEG); the available water capacity (AWC); pH; salinity (EC); the amount of sodium (SAR); carbonates; and susceptibility of the soil to water erosion (K factor).

The interpretation for roadfill evaluates the following soil properties at variable depths in the soil: shrink-swell potential expressed as linear extensibility percent (LEP), depth to bedrock or a cemented pan, wetness, slope, soil strength expressed as AASHTO group index number (AASHTO GIN), and content of fragments.

Table 19a.--Water Management

(The information in this table indicates the dominant soil condition but does not eliminate the need for onsite investigation. The numbers in the value columns range from 0.01 to 1.00. The larger the value, the greater the potential limitation. The rating is based on the limitation with the highest value. Only the three highest value limitations are listed. There may be more limitations. Fine-earth fractions and coarse fragments are reported on a weight basis. An explanation of the rating criteria and of the abbreviations used in describing the limitations is given at the end of the table)

Map symbol and component name	Pct. of map unit	Embankments, dikes, and levees		Pond reservoir areas	
		Limitations	Value	Limitations	Value
W:					
Water	100	Not rated		Not rated	

The interpretation for embankments, dikes, and levees evaluates the following soil properties at variable depths in the soil: ponding; wetness; depth to a restrictive layer; fragments more than 3 inches in size; salinity (EC); Unified classes for a high content of organic matter (PT, OL, and OH); Unified classes that are hard to pack (MH and CH); permeability that is too rapid, allowing seepage; piping as determined by Atterberg limits of liquid limit (LL) and plasticity index (PI); sodium content (SAR); and gypsum content.

The interpretation for pond reservoir areas evaluates the following soil properties at variable depths in the soil: slope, depth to hard or soft bedrock, depth to a cemented pan, marly textures, gypsum content, and permeability that is too rapid, allowing seepage.

Table 19b.--Water Management

(The information in this table indicates the dominant soil condition but does not eliminate the need for onsite investigation. The numbers in the value columns range from 0.01 to 1.00. The larger the value, the greater the potential limitation. The rating is based on the limitation with the highest value. Only the five highest value limitations are listed. There may be other limitations. An explanation of the rating criteria and of the abbreviations used in describing the limitations is given at the end of the table)

Water	100	Not rated		Not rated		Not rated	

The interpretation for sprinkler irrigation evaluates the following soil properties at variable depths in the soil: texture of the surface layer; clay content more than 60 percent; flooding during the growing season; ponding; depth to wetness; available water capacity (AWC); slope; depth to hard or soft bedrock; depth to a cemented pan; fragments larger than 75 millimeters; sodium content (SAR); pH; clayey or sandy textures; permeability less than .5 cm/hr, resulting in saturated soil conditions; soil erodibility expressed as a K factor; electrical conductivity (EC); sodium content expressed as sodium adsorption ratio (SAR); and sulfur content based on taxonomic placement.

The interpretation for drip or trickle irrigation evaluates the following soil properties at variable depths in the soil: flooding, ponding, depth to wetness, depth to hard or soft bedrock, depth to a cemented pan, electrical conductivity (EC), sodium content expressed as sodium adsorption ratio (SAR), soil sulfur content based on taxonomic placement, and permeability less than .5 cm/hr.

The interpretation for furrow irrigation evaluates the following soil properties at variable depths in the soil: texture of the surface layer; clay content and smectitic mineralogy; flooding during the growing season; ponding; depth to wetness; available water capacity (AWC); slope; depth to soft bedrock; depth to a cemented pan; fragments larger than 75 millimeters; sodium content (SAR); pH; clayey or sandy textures; permeability less than .5 cm/hr, resulting in saturated soil conditions; permeability more than 15 cm/hr, resulting in seepage; electrical conductivity (EC); sodium content expressed as sodium adsorption ratio (SAR); and sulfur content based on taxonomic placement.

Table 26.--Classification of the Soils

Soil name	Family or higher taxonomic class
Aquic Xerorthents	Aquic Xerorthents
Bidart	Coarse-loamy, mixed, superactive, acid Fluvaquentic Cryaquepts
Burnlake	Loamy-skeletal, mixed, superactive, frigid Humic Dystroxerepts
Cagwin	Mixed, frigid Dystric Xeropsamments
Callat	Loamy-skeletal, isotic Xeric Humicryepts
Cassenai	Mixed, frigid Dystric Xeropsamments
Caverock	Coarse-loamy, isotic, frigid Humic Dystroxerepts
Celio	Sandy-skeletal, mixed, frigid Oxyaquic Dystroxerepts
Christopher	Mixed, frigid Dystric Xeropsamments
Dagget	Sandy-skeletal, mixed Typic Cryorthents
Deerhill	Fine-loamy, isotic, frigid Ultic Palexeralfs
Ellispeak	Loamy-skeletal, isotic, frigid Lithic Haploxerolls
Fishsnooze	Loamy-skeletal, isotic Xeric Humicryepts
Florand	Loamy-skeletal, isotic Xeric Humicryepts
Freelpeak	Sandy-skeletal, mixed Typic Cryorthents
Gefo	Sandy, mixed, frigid Humic Dystroxerepts
Genoapeak	Fragmental, mixed, frigid Dystric Xerorthents
Glenalpine	Loamy-skeletal, isotic, frigid Humic Dystroxerepts
Hawkinspeak	Loamy-skeletal, mixed, superactive Pachic Argicryolls
Hellhole	Euic, frigid Typic Sphagnofibrists
Inville	Loamy-skeletal, isotic, frigid Ultic Haploxeralfs
Jabu	Coarse-loamy, mixed, superactive, frigid Ultic Haploxeralfs
Jobsis	Sandy-skeletal, mixed, shallow Typic Cryorthents
Jorge	Loamy-skeletal, isotic, frigid Andic Haploxeralfs
Kingsbeach	Fine-loamy, isotic, frigid Ultic Palexeralfs
Klauspeak	Sandy-skeletal, mixed Xeric Humicryepts
Kneeridge	Medial, mixed, frigid Humic Vitrixerands
Lithnip	Loamy-skeletal, isotic, nonacid Lithic Cryorthents
Lostridge	Loamy-skeletal, isotic Xeric Humicryepts
Marla	Sandy, mixed, frigid Aquic Dystroxerepts
Meeks	Sandy-skeletal, mixed, frigid Humic Dystroxerepts
Meiss	Loamy, isotic Lithic Humicryepts
Melody	Ashy-skeletal, mixed Lithic Vitricryands
Mountrose	Medial-skeletal, amorphic Xeric Vitricryands
Oneidas	Coarse-loamy, mixed, active, frigid Fragiaquic Haploxeralfs
Oxyaquic Cryorthents	Oxyaquic Cryorthents
Oxyaquic Xerorthents	Oxyaquic Xerorthents
Paige	Medial, mixed, frigid Humic Vitrixerands
Roadcat	Sandy-skeletal, mixed, frigid Typic Haploxerepts
Rockbound	Sandy-skeletal, mixed, frigid Lithic Xerorthents
Shakespeare	Loamy-skeletal, mixed, superactive Xeric Haplocryalfs
Shalgran	Sandy-skeletal, mixed, frigid, shallow Dystric Xerorthents
Sky	Medial-skeletal, amorphic Humic Xeric Vitricryands
Sofgran	Sandy-skeletal, mixed Typic Cryorthents
Southcamp	Loamy-skeletal, isotic, frigid Ultic Palexeralfs
Tahoe	Coarse-loamy, mixed, superactive, acid, frigid Cumulic Humaquepts
Tahoma	Fine-loamy, isotic, frigid Ultic Haploxeralfs
Tallac	Loamy-skeletal, mixed, superactive, frigid Humic Dystroxerepts
Temo	Mixed, shallow Typic Cryopsamments
Toem	Mixed, frigid, shallow Dystric Xeropsamments
Ubaj	Fine-loamy, mixed, superactive, frigid Ultic Haploxeralfs
Waca	Medial-skeletal, amorphic, frigid Humic Vitrixerands
Wardcreek	Ashy-skeletal, amorphic Xeric Vitricryands
Watah	Coarse-loamy, mixed, superactive, acid, frigid Histic Humaquepts
Waterpeak	Sandy-skeletal, mixed Pachic Haplocryolls
Watsonlake	Loamy-skeletal, isotic Andic Haplocryalfs
Whittell	Sandy-skeletal, mixed Typic Cryorthents
Windyridge	Sandy-skeletal, mixed, shallow Typic Cryorthents
Witefels	Mixed Typic Cryopsamments
Zephyrcove	Coarse-loamy, isotic, frigid Ultic Haploxeralfs

Appendices

Appendix 1.--Index of Common and Scientific Plant Names and Plant Symbols

(The plant synonymy listed in this Appendix 1s in accordance with the USDA-NRCS National Plants Database (http://plants.usda.gov/) at the time of publication)

Local common name	Scientific name	Plant symbol
alpine aster	Aster alpinus	ASAL3
American bistort	Polygonum bistortoides	POBI6
antelope bitterbrush	Purshia tridentata	PUTR2
arrowleaf balsamroot	Balsamorhiza sagittata	BASA3
arrowleaf ragwort	Senecio triangularis	SETR
Ashland cinquefoil	Potentilla glandulosa ssp. ashlandica	POGLA2
aster	Aster	ASTER
Baltic rush	Juncus balticus	JUBA
barley	Hordeum spp.	HORDE
bastardsage	Eriogonum wrightii	ERWR
bentgrass	Agrostis spp.	AGROS2
big sagebrush	Artemisia tridentata	ARTR2
big squirreltail	Elymus multisetus	ELMU3
bigleaf lupine	Lupinus polyphyllus	LUPO2
bitter cherry	Prunus emarginata	PREM
blister sedge	Carex vesicaria	CAVE6
blue wildrye	Elymus glaucus	ELGL
bluegrass	Poa glauca	POGL
bluegrass	Poa spp.	POA
bog bluberry	Vaccinium uliginosum	VAUL
bog laurel	Kalmia polifolia	KAPO
bottlebrush squirreltail	Elymus elymoides	ELEL5
Brewer's angelica	Angelica breweri	ANBR5
Brewer's aster	Eucephalus breweri	EUBR12
Brewer's fleabane	Erigeron breweri	ERBR4
Brewer's lupine	Lupinus breweri	LUBR3
brome	Bromus spp.	BROMU
Brown's peony	Paeonia brownii	PABR
buckwheat	Eriogonum spp.	ERIOG
bush chinquapin	Chrysolepis sempervirens	CHSE11
California brome	Bromus carinatus	BRCA5
California false hellebore	Veratrum californicum var. californicum	VECAC2
California red fir	Abies magnifica	ABMA
carex	Carex spp.	CAREX
catchfly	Silene spp.	SILEN
ceanothus	Ceanothus spp.	CEANO
checkerbloom	Sidalcea spp.	SIDAL
clover	Trifolium spp.	TRIFO
comb draba	Draba oligosperma var. oligosperma	DROL
common chokecherry	Prunus virginiana	PRVI
common yarrow	Achillea millefolium	ACMI2
creeping bentgrass	Agrostis stolonifera	AGST2
creeping snowberry	Symphoricarpos mollis	SYMO
creeping wildrye	Leymus triticoides	LETR5
curl-leaf mountain mahogany	Cercocarpus ledifolius	CELE3
currant	Ribes spp.	RIBES
cushion phlox	Phlox condensata	PHCO11
daisy	Erigeron spp.	ERIGE2
Douglas' sagewort	Artemisia douglasiana	ARDO3
dusky onion	Allium campanulatum	ALCA2
dwarf alpine Indian paintbrush	Castilleja nana	CANA3
false Solomon's seal	Maianthemum spp.	MAIAN
Fendler's meadow-rue	Thalictrum fendleri	THFE
fireweed	Chamerion angustifolium ssp. circumvagum	CHANC
fringed willowherb	Epilobium ciliatum	EPCI
frosted buckwheat	Eriogonum incanum	ERIN9
Geyer's willow	Salix geyeriana	SAGE2
giant red Indian paintbrush	Castilleja miniata	CAMI12
goldenweed	Pyrrocoma	PYRRO
gooseberry	Ribes spp.	RIBES
Gray's licorice-root	Ligusticum grayi	LIGR

Appendix 1.--Index of Common and Scientific Plant Names and Plant Symbols--Continued

Local common name	Scientific name	Plant symbol
greenleaf fescue	Festuca viridula	FEVI
greenleaf manzanita	Arctostaphylos patula	ARPA6
hairy arnica	Arnica mollis	ARMO4
Holboell's rockcress	Arabis holboellii	ARHO2
honeysuckle	Lonicera spp.	LONIC
huckleberry oak	Quercus vacciniifolia	QUVA
incense cedar	Calocedrus decurrens	CADE27
Indian ricegrass	Achnatherum hymenoides	ACHY
Jeffrey pine	Pinus jeffreyi	PIJE
Kentucky bluegrass	Poa pratensis	POPR
Lake Tahoe draba	Draba asterophora var. asterophora	DRASA2
lambstongue ragwort	Senecio integerrimus	SEIN2
largeleaf avens	Geum macrophyllum	GEMA4
Lemmon's catchfly	Silene lemmonii	SILE2
Lemmon's willow	Salix lemmonii	SALE
lettuce wirelettuce	Stephanomeria lactucina	STLA
limber pine	Pinus flexilis	PIFL2
little prince's pine	Chimaphila menziesii	CHME
locoweed	Astragalus spp.	ASTRA
lodgepole pine	Pinus contorta	PICO
longspur lupine	Lupinus arbustus	LUAR6
longstalk clover	Trifolium longipes	TRLO
low sagebrush	Artemisia arbuscula	ARAR8
lupine	Lupinus spp.	LUPIN
marumleaf buckwheat	Eriogonum marifolium	ERMA4
mat muhly	Muhlenbergia richardsonis	MURI
meadow barley	Hordeum brachyantherum	HOBR2
melic	Melica spp.	MELIC
milk kelloggia	Kelloggia galioides	KEGA
misc. perennial forbs	Unknown	PPFF
misc. perennial grasses	Unknown	PPGG
misc. shrubs	Unknown	SSSS
mountain big sagebrush	Artemisia tridentata ssp. vaseyana	ARTRV
mountain brome	Bromus marginatus	BRMA4
mountain hemlock	Tsuga mertensiana	TSME
mountain monardella	Monardella odoratissima	MOOD
mountain pride	Penstemon newberryi	PENE3
mountain sedge	Carex scopulorum	CASC12
mountain willow	Salix eastwoodiae	SAEA
moving polemonium	Polemonium californicum	POCA3
Mt. Hood pussypaws	Cistanthe umbellata var. umbellata	CIUMU
muhly	Muhlenbergia spp.	MUHLE
mule-ears	Wyethia amplexicaulis	WYAM
muttongrass	Poa fendleriana	POFE
Nebraska sedge	Carex nebrascensis	CANE2
needlegrass	Achnatherum spp.	ACHNA
Nevada bluegrass	Poa secunda	PONE3
Nevada podistera	Podistera nevadensis	PONE4
Northwest Territory sedge	Carex utriculata	CAUT
oceanspray	Holodiscus discolor	HODI
Oregon checkerbloom	Sidalcea oregana ssp. spicata	SIORS
Parry's rush	Juncus parryi	JUPA
penstemon	Penstemon spp.	PENST
pine needlegrass	Achnatherum pinetorum	ACPI2
pinemat manzanita	Arctostaphylos nevadensis	ARNE
pinewoods lousewort	Pedicularis semibarbata	PESE2
pioneer rockcress	Arabis platysperma	ARPL
ponderosa pine	Pinus ponderosa	PIPO
prairie flax	Linum lewisii	LILE3
prairie junegrass	Koeleria cristata	KOCR
primrose monkeyflower	Mimulus primuloides	MIPR
prostrate ceanothus	Ceanothus prostratus	CEPR
purple mountainheath	Phyllodoce breweri	PHBR4

Appendix 1.--Index of Common and Scientific Plant Names and Plant Symbols--Continued

Local common name	Scientific name	Plant symbol
pussytoes	Antennaria spp.	ANTEN
quaking aspen	Populus tremuloides	POTR5
ragwort	Senecio	SENEC
rockcress	Arabis spp.	ARABI2
rose meadowsweet	Spiraea splendens var. splendens	SPSPS
rose thistle	Cirsium andersonii	CIAN
Ross' sedge	Carex rossii	CARO5
rosy buckwheat	Eriogonum rosense	ERRO
rough bentgrass	Agrostis scabra	AGSC5
roundleaf snowberry	Symphoricarpos rotundifolius	SYRO
rush	Juncus spp.	JUNCU
Sandberg bluegrass	Poa secunda	POSE
sanddune wallflower	Erysimum capitatum var. perenne	ERCAP
Scouler's willow	Salix scouleriana	SASC
sedge	Carex spp.	CAREX
Shasta knotweed	Polygonum shastense	POSH
shining willow	Salix lucida	SALU
Sierra gooseberry	Ribes roezlii	RIRO
Sierra pea	Lathyrus nevadensis	LANE3
Sierra lodgepole pine	Pinus contorta var. murrayana	PICOM
Sierra stickseed	Hackelia nervosa	HANE
Sierra stonecrop	Sedum obtusatum	SEOB
Sierra willow	Salix orestera	SAOR
silverleaf phacelia	Phacelia hastata	PHHA
silvery lupine	Lupinus argenteus	LUAR3
singlehead goldenbush	Ericameria suffruticosa	ERSU13
slender cinquefoil	Potentilla gracilis var. fastigiata	POGRF2
slender wheatgrass	Elymus trachycaulus ssp. trachycaulus	ELTRT
slimstem reedgrass	Calamagrostis stricta	CAST36
snowberry	Symphoricarpos spp.	SYMPH
snowbrush ceanothus	Ceanothus velutinus	CEVE
sphagnum moss	Sphagnum squarrosum	SPSQ70
spikerush	Eleocharis spp.	ELEOC
spreading groundsmoke	Gayophytum diffusum	GADI2
spreading phlox	Phlox diffusa	PHDI3
squirreltail	Elymus elymoides ssp. californicus	ELELC2
straightleaf rush	Juncus orthophyllus	JUOR
sugar pine	Pinus lambertiana	PILA
sulfur-flower buckwheat	Eriogonum umbellatum	ERUM
sweetcicely	Osmorhiza berteroi	OSBE
thickstem aster	Eurybia integrifolia	EUIN9
thinleaf alder	Alnus incana ssp. tenuifolia	ALINT
threadleaf sedge	Carex filifolia	CAFI
timothy	Phleum pratense	PHPR3
Torrey's blue eyed Mary	Collinsia torreyi	COTO
tufted hairgrass	Deschampsia caespitosa	DECA18
Utah service-berry	Amelanchier utahensis	AMUT
Watson's spikemoss	Selaginella watsonii	SEWA2
wavyleaf Indian paintbrush	Castilleja applegatei	CAAP4
wax currant	Ribes cereum	RICE
waxy checkerbloom	Sidalcea glaucescens	SIGL2
western bottle-brush grass	Elymus elymoides	ELEL5
western buttercup	Ranunculus occidentalis	RAOC
western juniper	Juniperus occidentalis	JUOC
western Labrador tea	Ledum glandulosum	LEGL
western mountain aster	Symphyotrichum spathulatum var. spathulatum	SYSPS
western needlegrass	Achnatherum occidentale	ACOC3
western needlegrass	Achnatherum occidentale ssp. occidentale	ACOCO
western serviceberry	Amelanchier utahensis	AMUT
western white pine	Pinus monticola	PIMO3
white fir	Abies concolor	ABCO
whitebark pine	Pinus albicaulis	PIAL
whitestem goldenbush	Ericameria discoidea	ERDI14

Appendix 1.--Index of Common and Scientific Plant Names and Plant Symbols--Continued

Local common name	Scientific name	Plant symbol
whitestem gooseberry	Ribes inerme var. inerme	RIINI
whitethorn ceanothus	Ceanothus cordulatus	CECO
whitevein shinleaf	Pyrola picta	PYPI2
wild mint	Mentha arvensis	MEAR4
wild pea	Lathyrus spp.	LATHY
willow	Salix spp.	SALIX
Woods' rose	Rosa woodsii	ROWO
Woods' rose	Rosa woodsii var. ultramontana	ROWOU
woolly mule-ears	Wyethia mollis	WYMO
yampah	Perideridia spp.	PERID

Appendix 2.--Correlated Ecological Sites

Site ID	Ecological site name
F022AE001CA	Pinus albicaulis/Arabis platysperma
F022AE002CA	Pinus contorta var. murrayana/Salix lemmonii
F022AE004CA	Populus tremuloides-Abies concolor/Elymus glaucus
F022AE005CA	Pinus contorta var. murrayana-Juniperus occidentalis/Ribes/Carex rossii
F022AE006CA	Pinus jeffreyi-Abies concolor/Ceanothus cordulatus-Ceanothus prostratus/Pedicularis semibarbata-Kelloggia galioides
F022AE007CA	Abies concolor-Pinus jeffreyi/Ceanothus cordulatus-Symphoricarpos mollis/Kelloggia galioides
F022AE008CA	Abies magnifica-Abies concolor/Symphoricarpos mollis-Ribes cereum/Eucephalus breweri-Thalictrum fendleri
F022AE009CA	Pinus contorta var. murrayana/Ceanothus cordulatus/Elymus elymoides
F022AE010CA	Abies magnifica-Pinus monticola/Arctostaphylos nevadensis
F022AE011CA	Abies magnifica-Pinus jeffreyi/Symphoricarpos rotundifolius-Ribes cereum/Lupinus argenteus
F022AE013CA	Abies concolor-Pinus lambertiana/Quercus vacciniifolia-Amelanchier utahensis/Pyrola picta
F022AE014CA	Pinus contorta-Tsuga mertensiana/Phyllodoce breweri
F022AE016CA	Pinus contorta-Abies magnifica/Festuca viridula-Lupinus arbustus
F022AE019CA	Tsuga mertensiana-Abies magnifica/Eucephalus breweri
F022AE021CA	Pinus jeffreyi/Purshia tridentata-Arctostaphylos patula
F022AE023CA	Pinus jeffreyi/Arctostaphylos patula-Ceanothus cordulatus/Elymus elymoides
F022AE024CA	Abies concolor-Abies magnifica/Ceanothus velutinus-Ceanothus cordulatus
F022AY102NV	Pinus contorta/Artemisia tridentata ssp. vaseyana-Ribes/Carex-Achnatherum
F022AY103NV	Populus tremuloides/Symphoricarpos/Bromus marginatus-Elymus trachycaulus ssp. trachycaulus
F022AY104NV	Populus tremuloides/Salix-Rosa woodsii/Poa-Elymus trachycaulus ssp. trachycaulus
F022AY105NV	Pinus contorta-Abies magnifica/Artemisia tridentata ssp. vaseyana/Bromus marginatus-Achnatherum occidentale ssp. californicum
F022AY106NV	Pinus contorta-Abies magnifica/Arctostaphylos nevadensis/Achnatherum occidentale ssp. occidentale-Carex rossii
F022AY109NV	Pinus contorta-Tsuga mertensiana/Carex
F022AY114NV	Tsuga mertensiana/Carex-Poa
F022AY116NV	Pinus jeffreyi-Abies concolor var. lowiana/Artemisia tridentata ssp. vaseyana/Achnatherum occidentale ssp. occidentale
F022AY118NV	Abies magnifica-Pinus contorta/Artemisia tridentata ssp. vaseyana/Bromus marginatus-Achnatherum occidentale ssp. occidentale
F022AY120NV	Pinus jeffreyi/Arctostaphylos nevadensis/Achnatherum lettermanii
F022AY121NV	Pinus contorta-Abies magnifica/Artemisia tridentata ssp. tridentata/Achnatherum occidentale ssp. occidentale-Carex rossii
F022AY134NV	Pinus albicaulis/Carex-Poa
R022AE202CA	Granitic Pocket
R022AE203CA	Frigid Loamy Floodplain
R022AE204CA	Sphagnum Fen
R022AE207CA	Cold wet alluvial flat
R022AE208CA	Frigid Loamy Terrace
R022AE209CA	Flooded Basins
R022AE210CA	Shallow Sandy Slope
R022AE211CA	Shallow Andesite Ridge
R022AE213CA	Steep Talus Slope

Appendix 2.--Correlated Ecological Sites--Continued

Site ID	Ecological site name
R022AE214CA	Gravelly Flats
R022AE215CA	Deep Cryic Volcanic Slope
R022AE217CA	Volcanic Slopes
R022AE219CA	Cryic Volcanic Slope
R022AE221CA	Cold Semi-Wet Alluvial Flat
R022AY011NV	Mountain Ridge 30+ p.z.
R022AY012NV	Barren Slope 20+ p.z.
R022AY013NV	Gravelly Outwash
R022AY017NV	Semi-Wet Meadow
R022AY020NV	Prunus Pocket
R022AY021NV	South Slope 30+ p.z.
R022AY024NV	Mahogany Savanna
R022AY025NV	Mahogany Thicket
R022AY031NV	Loamy Slope 30+ p.z.
R022AY032NV	Alpine Ridge
R022AY034NV	Moist Willow
R022AY038NV	Shallow Loam 30+ p.z.
R022AY051NV	Krummholz

NRCS Accessibility Statement

The Natural Resources Conservation Service (NRCS) is committed to making its information accessible to all of its customers and employees. If you are experiencing accessibility issues and need assistance, please contact our Helpdesk by phone at 1-800-457-3642 or by e-mail at ServiceDesk-FTC@ftc.usda.gov. For assistance with publications that include maps, graphs, or similar forms of information, you may also wish to contact our State or local office. You can locate the correct office and phone number at http://offices.sc.egov.usda.gov/locator/app.
