World Agricultural Production

India Cotton Production and Yield 1994/95 to 2007/08

India Cotton: Increasing Use of Bt Varieties Boosts Yield

India cotton production for 2007/08 is forecast at a record 25.0 million bales, up 0.5 million or 2 percent from last month and up 3.2 million or 15 percent from last year. The year-to-year increase is attributed to higher sown area, generally favorable monsoon rainfall, and a forecast record yield. Area is estimated at a record 9.5 million hectares, unchanged from last month but up 0.3 million or 4 percent from last year. According to the U.S. agricultural attaché in New Delhi, the record area is the result of strong cotton prices and positive returns received by farmers in 2006/07. It is widely acknowledged by officials and other specialists that the strong upward trend in India's cotton yield in recent years is due largely to the increasing adoption of insect-resistant Bt cotton. In 2006/07, the government of India approved 62 new Bt varieties for

commercial cultivation; in 2007/08 Bt cotton will likely account for more than 60 percent of the total cotton area. Given the year-to-year increase in Bt area, 2007/08 yield is forecast to reach a record 573 kilograms per hectare. Harvest of the 2007/08 crop is underway, and a report from the Cotton Corporation of India indicates that 21.9 million bales had arrived at ginning facilities by April 6. By the same date last season, arrivals had reached 18.7 million bales, or 86 percent of final 2006/07 output. *(For additional information, please contact Jim Crutchfield at 202-690-0135.)*

Australia Sorghum: Production Forecast to Double from Last Year

Australia sorghum production for 2007/08 is forecast at 2.7 million tons, up 0.2 million or 8 percent from last month and up 1.3 million or 98 percent from last year. Area is estimated at 0.8 million hectares, unchanged from last month but up 0.16 million or 26 percent from last year. The relatively high prices for sorghum, combined with favorable rainfall, have contributed to a near-record sown area. Australia sorghum production is concentrated in two eastern states: Queensland produces about 60 percent of the country's output and New South Wales accounts for the remaining 40 percent. Summer rainfall has been above average in the key production regions of northern New South Wales and southern and central Queensland. The rainfall was extremely beneficial for early-sown grain sorghum crops and extended the planting season for late sorghum crops. Abundant soil moisture this season will likely boost yields to near-record levels in both New South Wales and Queensland. Despite damaging floods in central Queensland's sorghum region, the increased yield potential in southern Queensland growing regions will more than offset these losses. *(For additional information, please contact Jim Crutchfield at 202-690-0135.)*

Ethiopia: Record Output Forecast for Both Corn and Wheat

Ethiopia's corn and wheat production for 2007/08 are forecast to reach record levels for the third consecutive year. Corn production is estimated at 5.6 million tons, up 12 percent from last year, and wheat production is estimated at 4.9 million tons, up 32 percent. The year-to-year increases are attributed to favorable weather and well-distributed rainfall in both the main production zones and the marginal crop areas. Other contributing factors include record planted area and improved yields from the better availability of fertilizers, seeds, and credit. In addition, consistently high local grain prices have encouraged growers to increase investments in agricultural inputs and to plant more wheat and corn. *(For more information, contact Curt Reynolds at 202-690-0134.)*

Indonesia: Record Area Forecast for Corn

Indonesia corn production for 2007/08 is forecast at 7.5 million tons, up 0.5 million or 7 percent from last month and up 0.8 million or 12 percent from last year. Area is estimated at 3.6 million hectares, up 0.2 million or 6 percent from last month and up 0.3 million or 9 percent from last year. Yield is forecast at 2.08 tons per hectare, 2 percent above the 5-year average. The combination of high prices, favorable rainfall, and government initiatives are expected to drive corn area to a record level. The U.S. agricultural attaché in Jakarta reports that the rising price of corn will act as an additional incentive for farmers who will be choosing between rice and corn during the second crop season that normally starts in April. In an effort to achieve self-

sufficiency in corn production, the government of Indonesia subsidizes the purchase of expensive hybrid planting seed. As a result, the area planted to hybrid seed this season is estimated to increase modestly to over 0.8 million hectares, or 23 percent of total corn area. Most corn farmers in Indonesia continue to use locally produced, lower-yielding seed. (*For more information, contact Jim Crutchfield at 202-690-0135.*)

This report uses information from the Foreign Agricultural Service's (FAS) global network of agricultural attachés and counselors, official statistics of foreign governments and other foreign source materials, and the analysis of economic data and satellite imagery. Estimates of foreign area, yield, and production are from the International Production Assessment Division, FAS, and are reviewed by USDA's Inter-Agency Commodity Estimates Committee. Estimates of U.S. area, yield, and production are from USDA's National Agricultural Statistics Service. Numbers within the report may not add to totals because of rounding. This report reflects official USDA estimates released in the World Agricultural Supply and Demand Estimates (WASDE-457), April 9, 2008.

Printed copies are available from the National Technical Information Service. Download an order form at http://www.ntis.gov/products/specialty/usda/fas_a-g.asp, or call NTIS at 1-800-363-2068.

The FAS International Production Assessment Division prepared this report. The next issue of World Agricultural Production will be released after 9:30 a.m. Eastern Time, May 9, 2008.

World and Selected Countries and Regions

4/9/2008 9:06:02 AM

TABLE 18

The table below presents a 26-year record of the differences between the April projection and the final estimate. Using world wheat production as an example, changes between the April projection and the final estimate have averaged 2.0 million tons (0.4 percent) and ranged from -6.8 to 6.5 million tons. The April projection has been below the final 15 times and above the final 11 times.

RELIABILITY OF PRODUCTION PROJECTIONS

COMMODITY AND REGION	PROJECTION AND FINAL ESTIMATES, 1981/82 - 2005/06 1/					
	Difference		Lowest	Highest	Below	Above
	Average	Average	Difference		Final	Final

1/ The final estimate for 1981/82-2006/07 is defined as the first November estimate following the marketing year.

2/ May not total 25 if projection was the same as the final.

3/ Includes corn, sorghum, barley, oats, rye, millet, and mixed grain.
