Abundant subtropical moisture prevailed across South Texas during the start of April. A vigorous upper-level disturbance propagated across the region during the afternoon on the 2nd and the effects continued into the early morning hours on the 3rd. The disturbance forced the development of numerous showers and strong thunderstorms. Mid and upper level winds were relatively light resulting in slow moving and nearly stationary thunderstorms that produced flooding rains. Numerous reports of widespread flooding prevailed across the area with as much as 8-12 inches of rain reported across the greater Corpus Christi metropolitan area.

Webb County

Laredo	04	2110CST			0	0			Hail(1.75)
