Executive Summary

The Carl D. Perkins Vocational and Technical Education Act of 1998 (Perkins III or Act) requires, in Section 113(c)(3)(C), that the Secretary provide the appropriate committees of Congress copies of annual reports received by the department from each eligible agency that receives funds under the Act. Section 113(c)(3)(A) further requires the Secretary to make the information contained in such reports available to the general public. These reports contain information on states' progress in achieving their adjusted performance levels—negotiated with and approved by the department—on the following core indicators of performance listed in Section 113(b)(2)(A):

- Student attainment of challenging State established academic, and vocational and technical, skill proficiencies.
- Student attainment of a secondary school diploma or its recognized equivalent, a proficiency credential in conjunction with a secondary school diploma, or a postsecondary degree or credential.
- Placement in, retention in, and completion of, postsecondary education or advanced training, placement in military service, or placement or retention in employment.
- Student participation in and completion of vocational and technical education programs that lead to nontraditional training and employment.

As required by statute, states also provide disaggregated data on the progress of students in each of the following special population categories listed in Section 3:

- Individuals with disabilities;
- Individuals from economically disadvantaged families, including foster children;
- Individuals preparing for nontraditional training and employment;
- Single parents, including single pregnant women;
- Displaced homemakers; and
- Individuals with other barriers to educational achievement, including individuals with limited English proficiency.

As noted in Program Memorandum--OVAE/DVTE FY 2000-03, dated October 15, 1999, a tech-prep program is vocational education by definition and states must report for tech-prep students by each sub-indicator separately. Section 206 of Perkins III further requires states to report on the effectiveness of their tech-prep programs. Finally, the department requires that states report on the progress of students by gender, race, and ethnicity.

This is the fourth annual report to Congress by the department. In finalizing their data submissions to this department, states attested to the accuracy and completeness of their data.

This report transmits data that states submitted to the department for Program Year (PY) 2002-2003.¹ Among the highlights of this report:

- ***More students were reported by states as having enrolled in vocational and technical education courses in PY 2002-2003 than in the past three years.***
- ***There remain concerns about the quality and reliability of states' performance data.*** Among the major issues are: the use of varying measures which do not meet a common standard of validity and reliability, the inconsistency among states in student population definitions (i.e., who they count in their accountability systems), the inability of many states to track students' progress in further education and employment, and the shortage of national or state assessments to measure students' technical skill attainment--an important outcome of participation in vocational and technical education.
- ***Twenty-three states were awarded incentive grants from the department during PY 2002-2003 for having exceeded their performance levels overall under Perkins III, Title I of the Workforce Investment Act (WIA), and the Adult Education and Family Literacy Act (AEFLA):*** Alabama, Colorado, Florida, Georgia, Iowa, Illinois, Kentucky, Louisiana, Maryland, Michigan, Minnesota, Missouri, Mississippi, Montana, North Carolina, North Dakota, Nebraska, New Hampshire, Oklahoma, Oregon, South Dakota, Tennessee, and Texas. This represents an increase from PY 2001-2002 when sixteen states were awarded incentive grants.
- ***Six states met or exceeded their PY 2002-2003 Perkins secondary performance levels, in every single indicator.*** This represents a decrease from PY 2001-2002 when 15 states met all their secondary performance levels.
- ***Five states met or exceeded their Perkins postsecondary performance levels, in every single indicator.*** This represents a decrease from PY 2001-2002 when eight states met all of their postsecondary performances levels.

This report to Congress contains three sections. The first section enumerates the accountability requirements in Perkins III and describes efforts by the department to work with states to develop their performance accountability systems and their performance levels for vocational and technical education. The second section presents highlights of states' progress in meeting their PY 2002-2003 performance levels, along with individual state data reports. The final section discusses issues pertaining to the quality and reliability of states' Perkins performance data.

¹ The program year (PY) generally operates from July 1 – June 30.

I. Introduction

A. Accountability for Results

The Carl D. Perkins Vocational and Technical Education Act of 1998 (Perkins III) is the principal source of federal funding to states for the improvement of secondary and postsecondary vocational and technical education programs. Each year under Perkins III, Congress has appropriated more than \$1.2 billion for grants to states, including the basic state grants (Title I) and tech-prep grants (Title II). States then determine what share of Perkins III funds should be allocated to secondary and postsecondary institutions in their state. Over the past four years, states have allocated an average of 60 percent of their funds to secondary education and 40 percent to postsecondary education. A few states allocate as much as 90 percent of their funds to secondary vocational and technical education programs and only 10 percent to their postsecondary programs. States generally distribute federal funds by formula to local educational agencies, area vocational and technical schools, community colleges, and other public or private nonprofit institutions that offer vocational and technical education programs that meet the requirements of the law. Attachment A provides information on each state's allocation for PY 2002-2003, the year covered in this report.

Congress made *accountability for results* a central focus of the Perkins III legislation, setting out new performance accountability requirements for states and local programs. These requirements were established "to assess the effectiveness of the State in achieving statewide progress in vocational and technical education, and to optimize the return of investment of Federal funds in vocational and technical education activities." [Section 113(a)] With input from local program administrators, states are required to report annually on the following core indicators of performance:

- Student attainment of challenging State established academic, and vocational and technical, skill proficiencies.
- Student attainment of a secondary school diploma or its recognized equivalent, a proficiency credential in conjunction with a secondary school diploma, or a postsecondary degree or credential.
- Placement in, retention in, and completion of, postsecondary education or advanced training, placement in military service, or placement or retention in employment.
- Student participation in and completion of vocational and technical education programs that lead to nontraditional training and employment.

For purposes of state data collection and reporting, the department subdivided the core indicators into fourteen sub-indicators—seven indicators each for secondary and postsecondary education. By statute, states also are required to report disaggregated data on the performance of students in the following special population categories:

- Individuals with disabilities;
- Individuals from economically disadvantaged families, including foster children;
- Individuals preparing for nontraditional training and employment;
- Single parents, including single pregnant women;
- Displaced homemakers; and
- Individuals with other barriers to educational achievement, including individuals with limited English proficiency.

Section 206 of Perkins III further requires states to report on the effectiveness of their tech-prep programs. Finally, the department requires that states report on the progress of students by gender, race, and ethnicity. As noted in Program Memorandum--OVAE/ DVTE FY 2000-03, dated October 15, 1999, a tech-prep program is vocational education by definition and states must report for tech-prep students by each sub-indicator separately.

B. Establishing Measures and Setting Performance Levels

The Perkins III legislation afforded states considerable latitude in selecting their measurement approaches for each indicator and identifying those students on which to report performance.² This law was passed prior to the No Child Left Behind (NCLB) Act of 2001 and does not require that these indicators meet a single standard of validity and reliability. States submitted their measurement approaches and student population definitions, along with baseline performance levels for each of the sub-indicators, as part of their original Perkins III state plans. States then reached agreement with the department on the performance levels they would seek to achieve for each sub-indicator for each year in which the legislation would be in effect. To date, most states, if not all, have changed one or more of their measurement approaches, student population definitions, or performance levels, thus making it impossible to analyze state performance trends except in the most general of terms (i.e., describe how many states met or did not meet their levels).

Further, while the legislative latitude has enabled states to build upon their existing data collection systems, it has produced wide variation across states in student population definitions and measurement approaches. For example, one state may measure academic attainment using a state-developed assessment instrument, while another state may use grade point averages.

C. Efforts to Help States Build their Perkins Accountability Systems

Since Perkins III was enacted, the department has worked with states to help them build and continually improve their performance accountability systems for vocational and technical education. During the first two years of Perkins III implementation, the department hosted “Data Quality” and “Program Quality” workshops. These workshops brought together state directors,

² States report performance data for “concentrators”—that is, students who take a threshold number of courses or credits in vocational and technical education. This definition varies from state to state.

policy makers, and data experts to review and improve student population definitions and measurement approaches. The workshops were followed by a series of conference calls to discuss data measurement and collection issues. The department also established a Web site—the Peer Collaborative Resource Network (PCRN)—to foster discussion among states on issues pertaining to Perkins accountability systems. Among the recent discussion items have been strategies to incorporate into states' Perkins accountability systems the data collection requirements under NCLB and the Office of Management and Budget's (OMB) "common measures."

During PY 2002-2003, the department continued to place heightened emphasis on the topic of accountability during its monitoring site visits. Among the issues addressed during these visits: policies and procedures used by the states to gather data from local grantees; efforts by the states to use performance data in funding local grantees; and procedures used by the states to ensure that the data received from local grantees are complete, accurate, and reliable.

Also, the department continues its Performance Measurement Initiative (PMI). This initiative is designed to help states improve their ability to report complete, accurate, and reliable data on students' academic performance, students' transition to postsecondary education and employment, and other important outcomes that are anticipated to be incorporated into new legislation when enacted. Six states—Arizona, Florida, Nebraska, New Hampshire, New York, and Pennsylvania—were selected through a competitive review process to collaborate with the department in the initial phases of the PMI initiative.

II. State Performance Data

A. Enrollment in Vocational and Technical Education

In PY 2002-2003, states reported over 15.3 million students as having enrolled in secondary and postsecondary vocational and technical education programs (Figure 1), a significant increase (28 percent) over the past year. Enrollment is an unduplicated count of all students reported by each state as having taken one or more vocational and technical education courses. These courses may or may not be funded with federal Perkins III funds. Table 1 below presents states' enrollment data by gender, race/ethnicity, and special population categories.

Table 1. Student Enrollment in Vocational and Technical Education: PY 2002-2003

Disaggregated Category		Secondary	Postsecondary and Adults
Gender	Male	5,076,937	2,729,694
	Female	4,221,899	3,275,532
	Unknown	5,257	97,242
Race/Ethnicity	Black	1,581,645	801,157
	Hispanic	1,529,742	943,985
	White	6,086,999	3,430,913
	Asian Pacific Islander	444,636	448,892
	American Indian	120,599	76,071
Special Populations	Individuals with Disabilities	1,033,436	173,299
	Economically Disadvantaged	2,662,279	1,556,500
	Nontraditional	1,550,855	787,627
	Single Parent	59,465	226,266
	Displaced Homemaker	2,169	64,993
	Limited English Proficient	543,052	304,553
	Other Educational Barriers	1,268,965	625,898

In PY 2002-2003, states also reported that approximately 2.4 million students enrolled in tech-prep programs (Figure 2). This represents a considerable increase (86 percent) from the prior year. It should be noted, however, that PY 2001-2002 represented a large decrease from the previous year. Wide variability also exists in how states identify tech-prep students. Over the last two years, tech-prep students have comprised about 13 percent of the total enrollment in vocational and technical education.

It is important to note that many states did not provide complete data on the performance of their secondary and postsecondary tech-prep students. This occurred despite the fact that states receive a separate grant award under Title II of Perkins III to serve tech-prep students and are required to submit performance data on tech-prep students under section 206 of the act. Table 7 provides a summary of where states failed to provide data, along with the total amount of tech-prep funds they received during FY 2002-03.

B. State Progress in Meeting Perkins Performance Levels

Attachment C provides individual state profiles containing performance data submitted to the department by states for PY 2002-2003. Data are reported by each state on students who are identified as “concentrators.” Attachment B provides each state’s definition of a “concentrator.” Although the definition of concentrator varies from state to state, most states define a concentrator as a student who is enrolled in a threshold level of vocational education, usually represented as two or three vocational and technical education courses.³

In view of the different state definitions of “concentrator” and the differences in sizes of student populations across states, some of the data provided by states in disaggregated form potentially could be personally identifiable. Therefore, as a precautionary measure, the department has masked data in certain cells to ensure that students could not be personally identified. Specifically, where a state reported actual performance data above 95.00 percent and below 10.00 percent, the cell was coded as >95.00 percent and <10.00 percent, respectively.

³ A typical high school course load, over a four-year period, includes 24-28 courses.

The department continues to examine whether this action appropriately makes data available to the public, as required by section 113(c)(3) of Perkins III, while ensuring that the available data are not personally identifiable.

Tables 2 and 3 summarize states' progress in attaining their secondary and postsecondary levels, respectively, for all students. Tables 4 and 5 summarize states' progress in attaining their performance levels on each indicator for students in selected disaggregated categories.⁴

Table 2. States (6) Meeting or Exceeding Their Performance Levels on Each Secondary Indicator and Sub-indicator: PY 2002-2003

Note: An (X) denotes where a state met or exceeded its secondary performance levels. An asterisk (*) and highlighted row indicate where a state met or exceeded all its secondary performance levels. A blank indicates where a state did not meet its secondary performance levels. An NP indicates where a state did not provide data and NO indicates where a state does not offer a diploma and credential.

TOTAL	22	21	22	25	30	22	22

Among the highlights of states’ progress:

- *Student attainment of challenging state established academic, and vocational and technical, skill proficiencies.*

Academic Attainment

Thirty-six states attained their performance levels for secondary academic attainment, but none of them did so for all disaggregated categories (i.e., gender, race/ethnicity, and special populations). Forty-two states attained their performance levels for postsecondary academic attainment, but no state did so for all disaggregated categories.

It is important to note that states use a wide variety of measurement approaches for academic attainment (Figures 3 and 4). Measures range from being “valid and reliable”—using a national or state assessment aligned to state academic standards—to “less than valid and reliable”—using grade point averages or course completion—that are subject to greater subjectivity and interpretation.

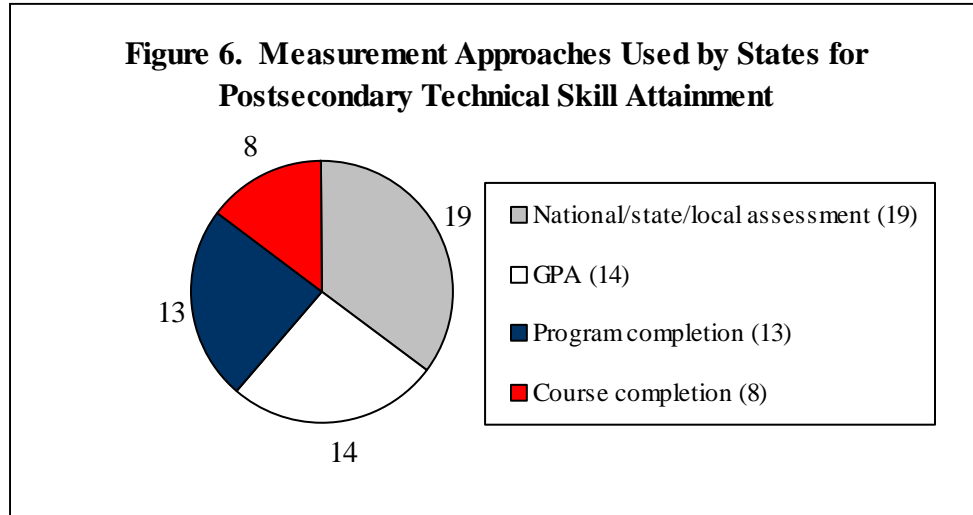

Technical Skill Attainment

Forty-two states attained their performance levels for secondary technical skill attainment, yet none of them did so for all disaggregated categories. Thirty-eight states attained their performance levels for postsecondary technical skill attainment; however only one state did so for all disaggregated categories.

States also use a wide variety of measurement approaches for technical skill attainment (Figures 5 and 6). As with academic attainment, measures range from “valid and reliable”—using a national or state assessment—to “less than valid and reliable”—using grade point averages or course completion—that are subject to greater subjectivity and interpretation.

- *Student attainment of a secondary school diploma or its recognized equivalent, a proficiency credential in conjunction with a secondary school diploma, or a postsecondary degree credential.*

Thirty-six states attained their performance levels for secondary high school completion, yet only one of them did so for all disaggregated categories. Eleven states attained their performance levels for attainment of a secondary diploma *and* another credential; however, none of them attained their performance levels for all disaggregated categories.

Thirty-two states attained their performance levels for postsecondary degree or credential attainment, but none of them did so for all disaggregated categories.

- ***Placement in, retention in, and completion of postsecondary education or advanced training, placement in military service, or placement or retention in employment.***

Thirty-six states attained their performance levels for placement of secondary students in postsecondary education, yet none of them did so for all disaggregated categories.

Thirty-four states attained their performance levels for placement of postsecondary students in employment, but none of them did so for all disaggregated categories. Thirty-seven states attained their performance levels for retention in postsecondary placement, but only one did so for all disaggregated categories.

- ***Student participation in and completion of vocational and technical education programs that lead to nontraditional training and employment.***

Participation

Thirty-nine states attained their performance levels for secondary nontraditional program participation, yet none of them did so for all disaggregated categories. At the postsecondary level, thirty-three states attained their performance levels for postsecondary nontraditional program participation, but none of them did so for all disaggregated categories.

Completion

Thirty-eight states attained their performance levels for secondary nontraditional program completion, yet none of them did so for all disaggregated categories. Thirty states achieved their performance levels for postsecondary nontraditional program completion, but none of them did so for all disaggregated categories.

C. State Progress Trends

Secondary Performance Levels

Compared to last year, more states met their performance levels on two secondary sub-indicators: skill attainment and nontraditional participation (Figure 7). In the other areas, including academic attainment and high school completion, fewer states attained their performance levels.

Over the last three years, states have had uneven progress in meeting their secondary performance levels. Considerably more states met their performance levels for technical skills and placement, but considerably fewer met their performance levels for completion. There was no significant progress by states in achieving their academic achievement or nontraditional performance levels.

Postsecondary Performance Levels

Compared to last year, states generally improved their performance on three postsecondary indicators: academic attainment, skill attainment, and degree completion (Figure 8). In all other areas, fewer states attained their performance levels this year, with notable reductions since last year in placement and retention in employment.

Over the last three years, states have made considerable progress in meeting several of their key postsecondary indicators: academic attainment, skill attainment, and retention. However, states did not make similar progress in degree completion, placement, or nontraditional indicators.

D. States Receiving Incentive Grants under the Workforce Investment Act

Section 503 of the Workforce Investment Act (WIA) provides incentive grants to reward states for successful performance in implementing their workforce and education programs. In PY 2002-2003, 23 states were eligible for incentive awards because they exceeded their performance levels overall for each of the following programs: WIA (Title I), Perkins III, and the Adult Education and Family Literacy Act (AEFLA). The states were: Alabama, Colorado, Florida, Georgia, Iowa, Illinois, Kentucky, Louisiana, Maryland, Michigan, Minnesota, Missouri, Mississippi, Montana, North Carolina, North Dakota, Nebraska, New Hampshire, Oklahoma, Oregon, South Dakota, Tennessee, and Texas. This represents an increase from PY 2001-2002 when sixteen states were awarded WIA incentive grants. Since PY 2000 (the first year for which WIA incentive grants were awarded), only four states have received a grant each year: Florida, Illinois, Kentucky, and Texas.

In PY 2002-2003, Perkins funds for the incentive grants were \$6,437,880. AEFLA funds were \$10,100,151, and WIA (Title 1) funds were \$7,922,000.

III. Issues Surrounding Data Quality

States continue to make strides in building and implementing their Perkins accountability systems. Many states have instituted more rigorous measures for their indicators and others have aligned their secondary data systems under Perkins III and NCLB. However, several problems remain surrounding data quality. The state flexibility emphasized in Perkins III has failed to yield consensus and consistency across states in how the indicators of performance are measured. This lack of consistency would be less problematic if the measures selected by each state were valid and reliable. Even if performance could not be compared from state to state, performance by an individual state could be compared year to year. Most state indicators of performance, however, are not valid or reliable, and as a result, the information they generate is not helpful in determining the effectiveness of vocational education programs.

Section 122(c)(4)(B) of Perkins III requires a state to describe in its state plan how it will use funds allotted under Perkins III to “ensure that students who participate in vocational and technical education programs are taught to the same challenging academic proficiencies as are taught to all other students.” Nevertheless, the measures or tools many states use to assess high school students’ attainment of challenging state-established academic proficiencies as required by Perkins III cannot generate valid or reliable data on the extent to which vocational students master the same state academic standards as other students. Even though some states use criterion-referenced, standards based assessments to measure student academic achievement statewide, more than 30 percent (17 out of 54) of states measure the academic achievement of their vocational students using indirect and invalid measures, such as high school graduation, maintaining a C average, and completing a specific number of courses. Some states also construct new methods to inflate the results. For example, one state reports on how vocational students score on an optional college aptitude test that many students do not take. While many states do use state assessments, these states often hold vocational students to a lower standard because the states are using the “basic” level to measure the academic achievement of vocational students instead of the “proficiency” level that the states must use to measure academic achievement under NCLB.

Deciding which students to include in measurements for accountability purposes is another issue that is both inconsistent and problematic across states. For example, most states limit the students counted in their measures of postsecondary degree attainment to those students who are more likely to succeed while excluding students who are at greater risk of dropping out. It is appropriate to narrow the population of students who enroll in a postsecondary technical education course to those students who have demonstrated some commitment to earning a credential by completing the introductory courses of a technical education program. A few states do apply a modest filter in their measure that is appropriate, including, for example, 5 states that include all students who have earned 10-12 or more credits. Most states, however, limit the students included in their completion measures so dramatically that the measures lose all meaning. In one state, a student must earn 60 credits before he or she is counted, while in another, students must complete all of the vocational courses in a degree or certificate program before the state will take responsibility for their completion. A number of states report only on full-time students, despite that nearly half of community college students are enrolled part-time,

and part-time students are at higher risk of not completing a degree or certificate program. One state counts as successes all students who actually attain a credential—as well as all students who do not attain a credential but who earn 45 credits.

A 2003 internal audit of OVAE's Perkins III accountability system conducted by the Office of Inspector General (OIG) revealed many issues surrounding the accuracy, reliability, and completeness of Perkins III data (Control Number ED-OIG A03-D0013).

Listed below are the OIG findings and recommendations, along with corrective actions that OVAE has committed to take to resolve the findings and, in so doing, further improve the quality of Perkins performance data.

- Finding #1: States were not submitting complete Perkins III performance data to the department.

Recommendation #1: In the future, provide additional one-on-one assistance activities to those states that are having problems reporting complete data in meeting the requirements of the law.

OVAE Actions:

- Hold national and annual regional meetings with states to improve the completeness and quality of their data. During this time, offer individual sessions with states to discuss their specific data issues.
- Conduct monitoring visits to states that are experiencing significant difficulties in reporting complete and accurate data.
- Hold annual meetings with state directors for career and technical education to address, among other things, the completeness and quality of their data. During this time, offer individual sessions with states to discuss their specific data issues.

Recommendation #2: Review the Compliance Supplement to determine if changes are needed to ensure that the state's Perkins III performance data are reviewed [by state auditors] for completeness.

OVAE Action:

- Once new legislation is passed, make necessary changes to the Compliance Supplement to ensure that states' Perkins III performance data are reviewed for completeness.

- Finding #2: OVAE needs to work with states to ensure that performance measures are valid.

Recommendation #1: Consider requesting clarification of the law in the current reauthorization to specify that OVAE has authority for reviewing and approving states' performance definitions.

OVAE Action:

- Released the Bush Administration's proposal for the Secondary and Technical Education Excellence Act, which offers recommendations for improving the Perkins III accountability system.

Recommendation #2: In approving future measures, in those cases where the performance measure does not fully represent the subindicator, provide guidance to the states for developing other measures.

OVAE Action:

- Provided guidance to states in the negotiation and approval process for new Perkins performance levels for FY 2004-2005 (extension year).

Recommendation #3: In those cases where the definition does not fully represent the performance measure, request that states make a full disclosure in the Consolidated Annual Report (CAR) stating that the data are the best the state has available to measure the subindicator.

OVAE Actions:

- Clarify directions on the CAR form to ensure that states make full disclosure of their definitions.
- During annual CAR training for states, instruct states to make full disclosure about their definitions.

- Finding #3: OVAE's monitoring process did not include WIA incentive award recipients for monitoring visits.

Recommendation #1: Revise its monitoring procedures to include for possible selection states that qualify for the WIA incentive awards.

OVAE Actions:

- Include states having received an incentive grant for FY 2002-2003 in the risk analysis for identifying states for monitoring during FY 2004-2005.
- Revise the monitoring checklist for accountability to incorporate items from the OIG instrument that was used to conduct the OVAE Perkins accountability audit.

- Finding #4: Not all states complied with the department's CAR reporting instructions.

Recommendation #1: Provide additional guidance and instruction to states to provide improvement strategies that address each subindicator for which the state did not meet its adjusted performance levels.

OVAE Actions:

- Clarify directions on the CAR form to ensure that states describe their improvement strategies for any subindicators for which they did not meet their adjusted performance levels.
- During annual CAR training for states, instruct states to describe their improvement strategies for any subindicators for which they did not meet their adjusted performance levels.

Recommendation #2: Follow-up with states that do not comply with the CAR reporting instructions.

OVAE Actions:

- Conduct individual follow-up calls with states that do not comply with the CAR reporting instructions.

IV. Conclusion

Many states have continued to make progress in building their performance accountability systems for vocational and technical education in response to Perkins III. For the most part, they continue to refine and upgrade their measurement approaches. Much of the data collected using these measures, however, are of questionable value because they are not valid or reliable and create a weak accountability system that is unable to track real improvements in performance. There continue to be dramatic inconsistencies among states in how student populations are defined which greatly impacts the ability to make comparisons across states. States vary widely in the way students are counted in their accountability systems, and more importantly, many states only count the students most likely to succeed, excluding students who are at greater risk of dropping out, such as part-time community college students.

Among the other major issues are the inability of many states to track students' progress in further education and employment, and the shortage of national or state assessments to measure students' technical skill attainment--an important outcome of participation in vocational and technical education.

To address these issues, several efforts are underway inside the department. Most importantly, with the expiration of Perkins III legislation in October 2004, Congress has begun the process of legislative reauthorization and has an opportunity to address these issues through statutory changes.

The department plans to continue its monitoring visits and technical assistance sessions that focus on accountability. This calendar year, eleven states will receive monitoring visits, and the department will again sponsor a leadership conference and data quality institutes for state directors of career and technical education and their accountability staffs.

Finally, to address the issue of technical skill assessments, two initiatives are underway. First, the department is commissioning a study of current assessments that are being used and exploring the relationship between these assessments, industry standards, and current curricular frameworks. Second, the National Association for State Directors of Career Technical Education Consortium (NASDCTEC) is working with states in a long-range process to develop technical skill assessments for each of the 16 career cluster areas it recognizes. The first set of assessments will evaluate students' general workplace competencies in each of the 16 career areas. Subsequent assessments will measure job-specific skills that students need to progress into entry- or advanced-level employment in each of the career areas.

As Perkins III continues to be implemented across this country, the department will report its progress as well as identify further opportunities to strengthen Perkins III accountability systems that meet the intent of the law—that is, being able to “assess the effectiveness of the State in achieving statewide progress in vocational and technical education, and to optimize the return of investment of Federal funds in vocational and technical education activities.”

- * The percentages for the secondary and postsecondary share of Title I funds are based on the state's basic allocation less amounts for state leadership, state administration, and any amounts reserved under the authority of Section 112(c) of Perkins.

Attachment B

States' Definitions of "Concentrators:" PY 2002-2003

State	Definitions	
	Secondary	Postsecondary
Alabama	A student earning two credits (Carnegie units) in a sequenced career/technical education program.	Student who has declared a major in a program designated by CIP ⁶ code as "career/technical" that culminates in the awarding of a short certificate, certificate, diploma, or associate degree to program graduates.
Alaska	A student who has taken 2 or more vocational education courses within an approved sequence in one of the specific career areas as defined by the Office of Vocational and Adult Education (OVAE/USED).	A participant who has been admitted into a certificate or degree program, or has completed at least 12 vocational credit hours of the course/program of study toward a certificate or degree, or has completed all coursework for an industry recognized credential (not awarded by the postsecondary institution), as established by the postsecondary institution.
Arizona	A student who achieves two Carnegie units/credits with a grade "C" or better in a single CTE program. One unit/credit must be in a Level III course.	A student enrolled in the state threshold level of vocational education. A minimum of seven vocational credit hours in the same vocational area prefix, and a minimum of one state-designated course in English or math, technical/business English, technical math integrated academic/occupational course at or above the 100 level, or demonstrated proficiency by assessment; both of the above must be obtained within the three previous years including the reporting period.
Arkansas	A student who enrolled in two units of credit within an occupational area in grades 9-12.	A student who has declared a major in or who has enrolled in a certificate, diploma, or occupational associate degree program.
California	A secondary school student enrolled in the second and advanced level courses (including the capstone course) of a planned CTE program sequence.	For 1P1 & 1P2 - students enrolled in any vocational course designated as a course in the middle or at the end of a vocational program. For 2P1, 3P1 & 4P2 - students who (1) successfully completed a minimum threshold of 12 or more units of related coursework in a vocational or technical program area with one or more of those courses designated as being in the middle or at the end of a vocational program or (2) received a certificate or degree in the cohort year.
Colorado	An individual who has been reported as a completer on the VE-135 ⁷ and has demonstrated attainment of the competencies identified in the program's measures and standards of performance.	A postsecondary completer who has attained a certificate or associate degree in the program.

⁶ CIP: The Classification of Instructional Programs (CIP) is a classification system of instructional programs developed by the National Center for Education Statistics (NCES).

⁷ VE – 135: A form used by Colorado to record program completion.

State	Definitions	
	Secondary	Postsecondary
Connecticut	A student who has completed at least two credits of a career and technical education sequence in a given career and technical education instructional program.	First-time, full-time, degree-seeking freshmen (including students entering in the summer).
Delaware	A student enrolled in a CTE pathway of three or more sequenced CTE courses (totaling three credits) in a state-approved CTE program.	A state-registered apprentice enrolled in a sequence of apprentice-related CTE courses using state-approved curriculum in a state-supported, apprentice-related training program.
District of Columbia	A student who has completed at least two courses in a career-technical program sequence.	A degree-seeking student who has completed at least six hours of a career-technical program sequence or a certificate-seeking student who has completed at least three.
Florida	A student who completes at least one occupational completion point within a vocational program. An occupational completion point is an exit point in a vocational program that is linked to a labor market entry point.	A student who completes at least one occupational completion point within a vocational program in the reporting year. An occupational completion point is an exit point in a vocational program that is linked to a labor market entry point; or, any student who has earned 11 or more credits toward the declared degree or certificate.
Georgia	A student who earned four or more credits (Carnegie units) in vocational education courses, of which three are in a concentrated technology/career prep (TCP) program of study.	A student enrolled in a credit major who has completed at least 12 hours (does not include specially admitted students).
Guam	A student who enrolled in a program/ sequence of courses identified in the GCC ⁸ /Guam DOE ⁹ MOA ¹⁰ and completed two years of course work in a program listed in the MOA.	A student with a declared major pursuing a certificate or associate degree and/or an individual accepted into the apprenticeship program.
Hawaii	A 12th grade student who has completed the requirements for her/his selected state certified vocational education program of study.	A student in a declared vocational program who has completed at least ten credits in her/his program.
Idaho	A student who: (1) has completed three or more semesters of a professional-technical program sequence by the end of his/her junior year, (2) has completed all the courses (if less than three semesters) offered in an occupational area, or (3) is enrolled in a state approved professional-technical school/academy.	A student enrolled in a state funded technical college professional-technical program.
Illinois	A student who has earned two Carnegie units of credit at the training level (typically 11th and 12 grades) in a program area.	A student who earns 12 credit hours during an academic year with the objective to complete a degree or an occupational certificate and the intent to enter a new occupation or improve their occupational skills.
Indiana	A student who completes a course or sequence of courses or instructional units that provides the academic and technical skills, knowledge, and proficiencies to prepare the individual for employment and/or further education.	A student who enrolled in a sequence of courses or instructional units that provides an individual with the academic and technical knowledge/skills/proficiencies to prepare the individual for employment and/or further education.

⁸ GCC: The Guam Community College (GCC) provides vocational and technical education for students from high school through college.

⁹ DOE: Guam Department of Education

¹⁰ MOA: Memorandum of Agreement

State	Definitions	
	Secondary	Postsecondary
Iowa	A vocational student who has completed a vocational program sequence of three or more units (three years) as identified by the school district.	A vocational student who graduates or leaves a program after completing the entire sequence of occupational courses in the program, with or without fulfilling all the necessary requirements leading to a degree, diploma, or certificate.
Kansas	An 11th or 12th grade student who has completed three courses within a program. The three courses may be (1) approved, but not necessarily funded; (2) two funded courses; or (3) part of a three-hour block course.	Any student enrolled in a technical education program.
Kentucky	A vocational concentrator is a student who is enrolled in a technical education program and satisfactorily completes three courses in a sequence of courses with industry-validated standards leading to an occupation/career major.	A full-time student who has declared a technical education major and is enrolled in a sequence of courses with industry-validated academic and technical knowledge and skill standards leading to an occupation or career in a one-year or two-year program.
Louisiana	A student who has a five year educational plan and has taken or is enrolled in a total of two or more of the vocational courses identified in the five year plan.	A vocational participant enrolled in a certificate, diploma, or associate degree vocational/technical program and who has completed the equivalent of 6 credit hours in the designated certificate, diploma or associate degree program.
Maine	High school seniors reported on fall EF-V-116 ¹¹ forms as enrolled in an approved secondary vocational program at an area vocational center.	Students formally admitted (matriculated) into a certificate, diploma or associate degree postsecondary technical education program offered with the approval of the Board of Trustees by a campus of the Maine Technical College System.
Maryland	Any student enrolling in a course at the concentrator level for a CTE completer program.	Maryland does not identify vocational concentrators. Maryland's focus is on CTE completers.
Massachusetts	A student formally enrolled in a state-approved (Chapter 74 ¹²) career and technical education program or is enrolled in a sequence of career and technical education courses leading to a vocational objective.	A student who has been formally admitted to a specific career program through institutional or program admissions criteria or who should have completed at least 15 credits of the state requirements of a given career program by the end of the current semester; and is currently enrolled in at least one career course.
Michigan	A student who is enrolled in a state-approved career and technical education program and who has completed at least 60% of the required program coursework.	An occupational student officially enrolled (as of the officially recognized federal count date) in an occupational program and who has earned at least 12 credits (excluding developmental coursework) toward the completion of a degree.

¹¹ EF-V-116: State enrollment form

¹² Chapter 74: In Massachusetts, those programs that meet the definition of vocational technical education contained in Massachusetts General Law Chapter 74, Section 1 and are approved by the Department of Education pursuant to Chapter 74 and the Vocational Technical Education Regulations 603 CMR 4.00. Such approved programs are known as "Chapter-74 approved programs."

State	Definitions	
	Secondary	Postsecondary
Minnesota	Any student successfully enrolled in a single CTE program for more than 90 hours (successfully defined as a passing grade).	A student with a declared major in a Perkins approved vocational technical education program and who has completed 33% of the program requirements (credits completed).
Mississippi	A vocational student who has completed the first year of a two-year program and has enrolled in the second year of the program.	A vocational student who has completed 50% or more vocational or technical classes within a program.
Missouri	A secondary vocational education participant who earns a minimum of two (2) units of credit in a vocational education program or sequence of vocational education courses.	A student earning 75% of the total number of credit hours required to complete a degree in a vocationally-approved subject area, or a participant in a postsecondary program that has completed a minimum of five hundred (500) clock hours.
Montana	A student who will have received at least three units of vocational course credit during a high school career.	A student who declares a vocational technical program of study.
Nebraska	A secondary student who has enrolled and/or completed a sequence of three or more career and technical education courses (or has completed all of the courses offered in an area) during their high school attendance, which lead to entry-level occupations, apprenticeship, military or post high school training and has achieved the 12 th grade level.	A student who is considered a vocational participant (a) has taken at least one 1.5 or 2.0 level course during the program year; (b) has a declared vocational major; and (c) has completed 30 or more semester (45 or more quarter) hours (as reported to IPEDS ¹³).
Nevada	A student enrolled in one or more terminal courses. A terminal course is an occupational-specific course that is taken at the end of a sequential course of study. Each school district has the responsibility of identifying the district's terminal courses.	A member of the occupational cohort. For the 2002-2003 reporting year, the occupational cohort consists of first-time students enrolled in the fall of 1999 that declared a vocational major (Associate of Applied Science Degree or Certificate of Achievement) anytime between fall 1999 and summer 2003 that were able to accumulate nine occupational credits between fall 1999 and summer 2003.
New Hampshire	A vocational student who has completed greater than 50% of the required sequence of instruction in his/her vocational program and is enrolled in the second half of the program as of October 1st or March 1st.	A vocational student who has completed greater than 50% of the required sequence of instruction in his/her vocational program and is enrolled in the second half of the program as of October 1st or March 1st.
New Jersey	A student who is enrolled in the final level/course of an approved occupational program after successfully completing previous coursework receiving at least a minimum passing grade.	Collegiate: A postsecondary student who is matriculated in an AAS or related credit generating certificate programs, and who is enrolled in, or has successfully completed one college-level course and was enrolled full-time in the fiscal reporting year. Adult: A postsecondary student who is enrolled in one or more vocational-technical course in an approved occupational program.

¹³ IPEDS: The Integrated Postsecondary Education Data System (IPEDS) surveys are conducted by the National Center for Education Statistics (NCES). The surveys ask for such information as fall enrollment, degree completers, and institutional finance.

State	Definitions	
	Secondary	Postsecondary
New Mexico	Those students enrolled in an identified program or coherent sequence of courses or instructional units providing them with the academic and technical knowledge, skills, and proficiencies to prepare for employment and/or further/advanced education and those students who have completed three or more career-technical courses in that sequence.	Those students enrolled in an identified program or coherent sequence of courses or instructional units providing them with the academic and technical knowledge, skills, and proficiencies to prepare for employment and/or further/advanced education and those students who have completed three or more career-technical courses in sequence (secondary) or have completed eight postsecondary credit hours and have declared a career-technical education major.
New York	A student who has attended school in the year in which the student is eligible to graduate and has passed a sequence of CTE courses that incorporate the Career Development and Occupational Studies Standards of New York state.	A first-time, full-time credit-bearing participant of an entry cohort for the fall of a given year, who attains at least 12 credits by June 30 of the reporting year.
North Carolina	A student who completes four eligible vocational (career technical education) courses in a career major (threshold level of vocational education) and who graduates.	A vocational concentrator is a student who is enrolled in a state-approved curriculum program that leads to an Associate of Applied Science degree, a diploma, or a certificate and who has completed 75% or more of the hours required in the student's major program of study.
North Dakota	A student enrolled in a sequence of two or more courses that provides the academic and technical knowledge/skills/ proficiencies within a vocational program.	A student who enrolled in a sequence of courses or instructional units that provides an individual with the academic and technical knowledge/skills/proficiencies to prepare the individual for employment and/or further education.
Ohio	A student who is enrolled in the last class of a series of classes within a program or is in the final class of a competency-based series of experiences. This field is completed in October and June data collection timeframes.	A student who has declared a major in a technical program, began enrollment no earlier than winter of 1998, and accumulated 36 semester (54 quarter) hours.
Oklahoma	A student enrolled in an Oklahoma Department of Career and Technology Education (ODCTE) approved occupational program to gain the knowledge and skills for employment or to continue into postsecondary education and/or advanced training.	A student enrolled in an Associate of Applied Science degree program.
Oregon	A student who has accumulated at least two credits in an approved professional technical education program during the four years of high school. In order to obtain this information, Oregon developed a four year individualized student record/course/program record system. Students who meet the concentrator threshold were extracted to provide the required performance management information.	A student who has completed more than half of a state-approved professional technical education certificate or degree program.
Pennsylvania	A concentrator at the secondary or postsecondary level is defined as a student who is enrolled in a PDE ¹⁴ Bureau-approved career and technical education program.	A concentrator at the secondary or postsecondary level is defined as a student who is enrolled in a PDE Bureau-approved career and technical education program.

¹⁴ PDE: Pennsylvania Department of Education

State	Definitions	
	Secondary	Postsecondary
Puerto Rico	Each 12th grade student who has been participating in a specific vocational course for two to three consecutive years (10 th , 11 th , and 12 th) or an adult participating in any particular adult program directed to complete an occupational field offered by a vocational public school or a CBO ¹⁵ .	Each student graduated from high school or its equivalent (GED) who has been participating in a specific occupational or technical course for one to two or more consecutive years towards an occupational certificate or two years or more towards an associate degree, or any particular adult program certificate offered by a vocational public school, any of the four campuses of our technological institute, our tool and die school or CBO.
Rhode Island	A high school student who enrolled in and completed at least two sequential, semester-long career and technical education courses in either a state recognized career and technical education program or a sequence of recognized courses.	A member of a cohort group defined as first time, full time matriculated career and technical education students enrolled in the school year commencing three years prior to the reporting year. Adult: A student who enrolled in a non-credit vocational training course or series of courses leading to a certificate.
South Carolina	A student who has been assigned a CIP (Classification of Instructional Programs) code designating a specific CTE program. CIP codes identify students who are pursuing four units of credit in course work leading to a career goal.	A student who has been assigned a CIP code designating a specific CTE program. Students in the Associate in Arts and Associate in Science degree programs were not included within this category since these programs are general education preparation for transfer to a higher education institution.
South Dakota	A student who earned two Carnegie units of credit within a program and is at least a junior in high school.	A student who is enrolled in a program of study and has completed 16 credits (one-year program) and 32 credits (two-year program).
Tennessee	A vocational concentrator has been defined in Tennessee as a student with three units (credits) in a focused, sequential vocational program of study (concentration) and one unit in a related vocational area or an additional credit in the sequence.	Vocational concentrators are students who are entering the second half of their program.
Texas	A student who demonstrates intent to achieve proficiency equivalent to at least two and one-half credits in a coherent sequence of courses for career and technology preparation and meets all academic requirements.	A student who has declared a major course of study in a technical field and intends to receive a certificate or degree in that field.
Utah	A student who completes three semesters (1.5 credits) of training in the same Applied Technology Education (ATE) program area during grades 9-12. An ATE Program area consists of all courses beginning with the same first two digits of the CIP Code.	A full-time student (initially registering as full-time) with a declared major in an ATE ¹⁶ program leading to an ATE certificate or an Associate of Applied Science degree or approved ATE AS Degrees.

¹⁵ CBO: Community-based organization

¹⁶ ATE: The Utah System of Higher Education works with the State Office of Education to provide Applied Technology Education (ATE) for students who want to pursue vocational education, leading to higher paying career opportunities after high school.

State	Definitions	
	Secondary	Postsecondary
Vermont	A student who has either been given instruction in all of a program's competencies and workplace skills or has attended one technical education program (other than pre-vocational) for at least 80 minutes per day for two years (or equivalent).	A student whose performance will be measured and reported under Vermont's core indicators and reporting requirements. Vocational concentrators will refer to any students who have declared a major in and/or have enrolled in a two-year vocational-technical education program or certificate program offered through a postsecondary institution and who are taking courses that meet the requirements of that program.
Virgin Islands	A student who has enrolled in the vocational education program and is taking more than two courses in sequence with plans to continue toward completion in a specific career pathway.	A student who has enrolled in the vocational education program and is taking more than two courses in sequence with plans to continue toward completion in a specific career pathway.
Virginia	A career and technical education concentrator is a student who completes a coherent sequence of courses in a specific program area as identified in the Administrative Planning Guide.	A student who has a declared major in a technical education program at the postsecondary level/community college
Washington	A student who has enrolled in more than one vocational course within a single program area but has not yet completed the instructional program.	A vocational concentrator is a K-12 definition and does not apply to the postsecondary system.
West Virginia	A student who has completed at least four units of credit in a vocational concentration.	A student who enrolls and declares as an academic major a program leading to a certificate (one year) or an associate degree in a career-technical program.
Wisconsin	A student who took 24 credits in an academic year or enrolled for the first time in a less than 30 (short term) program and had taken no classes in the prior 4 years (not including tech-prep or youth options courses).	A postsecondary vocational concentrator is a student who has been accepted into a program for the first-time and is enrolled full-time (took 24 or more credits) in his or her program (or programs if the student has been accepted into two programs; i.e., is a double major). First time means that a student has not been enrolled in a program for the past ten years (student records are not maintained at the state level for more than 10 years). A cohort of these students is created each year and followed for three years for outcomes; students remain in their cohort even if they take less than 24 credits during the second or third year that their cohort is followed.
Wyoming	A student who has taken three or more semester courses in a vocational program, including those who may be currently enrolled in their third course.	A student who has taken six or more semester courses in a vocational program, including those who may be currently enrolled in their sixth course.

Attachment C

**Carl D. Perkins Vocational and
Technical Education Act of 1998
(Perkins III)**

**INDIVIDUAL STATE DATA PROFILES:
PY 2002-2003**

Notes for Interpreting the Individual State Data Profiles

Each state's data need to be reviewed in the context of that state's definition of a concentrator. In view of the different state definitions of "concentrator" and the differences in sizes of student populations across states, some of the data provided by states in disaggregated form could be personally identifiable. Therefore, as a cautionary measure, the department has masked data in certain cells to ensure that students could not be personally identified. Specifically, where a state reported actual performance data above 95.00 percent or below 10.00 percent, the cell was coded as >95.00 percent and <10.00 percent, respectively. We will continue to examine whether this appropriately makes data available to the public as required by Section 113(c)(3) of Perkins III while ensuring that the available data are not personally identifiable.

In finalizing their data submissions to this department, the states attested to the accuracy and completeness of the data. The term "2002-2003 levels" refers to the adjusted performance levels agreed upon by the department and a particular state. The data are self-explanatory for the purpose of Section 113(c)(1) of Perkins III, which is to report the progress of the states in achieving their adjusted levels of performance for core indicators and any additional state indicators. The abbreviated headings and definitions used by some states, however, may not always clarify distinctions or similarities in the specific data collected for different sub-indicators. Anyone wishing further information about a particular state's data may obtain information from the Accountability and Performance Branch by calling Dr. John Haigh at (202) 245-7700.

Notes:

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

Notes:

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

Notes:

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

Notes:

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

Notes:

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

Notes:

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

IOWA

Postsecondary

Indicators	Academic Attainment	Skill Attainment	Postsecondary Degree/Credential	Postsecondary Placement	Postsecondary Retention	Nontraditional Participation	Nontraditional Completion
Measurement Approach	Program Completion	National/State Standards & Local Assessment	State/Local Data	Surveys/Placement Records	Surveys/Placement Records	State/Local Data	State/Local Data
Measurement Definitions	Number of students receiving a degree, diploma, or certificate.	Number of program completers rated as occupationally proficient.	Number of students receiving a degree, diploma, or certificate.	Number of completers placed in continuing education, non-military employment, and military.	Number of completers employed both the second (year after graduation) and fourth (graduation year) UI quarters.	Number of students in underrepresented gender groups enrolled in programs for nontraditional occupations.	Number of students in underrepresented gender groups who completed a program for nontraditional occupations.

Notes:

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

Notes:

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

Notes:

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

Notes:

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

Notes:

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

Notes:

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

Notes:

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

Adult

Indicators	Academic Attainment	Skill Attainment	Credential	Placement	Retention	Nontraditional Participation	Nontraditional Completion
Measurement Approach	Academic GPA	Vocational-Technical GPA	Surveys/Placement Records	State/Local Administrative Data	Surveys/Placement Records	State/Local Administrative Data	State/Local Administrative Data
Measurement Definitions	Percent of adult CTE enrollees who achieved a grade point average of 2.5 or higher in academic courses.	Percent of adult CTE enrollees who achieved a grade point average of 2.5 or higher in CTE courses.	Percent of adult CTE completer survey respondents who were placed in further education or advanced training, employment, and/or military service within eight months.	Percent of adult CTE enrollees who met the state-defined threshold for program completion and received a diploma, certificate, or other formal award.	Percent of adult CTE completers who were employed in a related field in the first quarter following completion (July 1 – September 30) who were also employed in the third quarter following completion (January 1 – March 31).	Percent of nontraditional adult CTE enrollees in programs leading to employment in occupations in which underrepresented gender groups represent less than 25 percent of employment.	Percent of nontraditional adult CTE completers of programs leading to employment in occupations in which underrepresented gender groups represent less than 25 percent of employment.

Notes:

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

Notes:

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

Notes:

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

Notes:

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

Notes:

This chart reports results for students that the state has identified as “concentrators.” Please see Attachment B for states’ definitions.

Definitions for special populations are provided in Attachment D.

Actual performance data above 95 percent and below 10 percent have been masked to protect student confidentiality.

N/E - indicates that the state reported no enrollment for that disaggregated category or for that sub-indicator.

N/P - indicates that either data were not collected by the state or there was no program in the state.

Attachment D

Glossary of Terms

Below are the statutory definitions for each of the special populations for which states are required to provide data.

DISPLACED HOMEMAKER

The term `displaced homemaker' means an individual who--

- (A)(i) has worked primarily without remuneration to care for a home and family, and for that reason has diminished marketable skills;
 - (ii) has been dependent on the income of another family member but is no longer supported by that income; or
 - (iii) is a parent whose youngest dependent child will become ineligible to receive assistance under part A of title IV of the Social Security Act (42 U.S.C. 601 et seq.) not later than 2 years after the date on which the parent applies for assistance under this title; and
- (B) is unemployed or underemployed and is experiencing difficulty in obtaining or upgrading employment.

INDIVIDUAL WITH LIMITED ENGLISH PROFICIENCY

The term `individual with limited English proficiency' means a secondary school student, an adult, or an out-of-school youth, who has limited ability in speaking, reading, writing, or understanding the English language, and--

- (A) whose native language is a language other than English; or
- (B) who lives in a family or community environment in which a language other than English is the dominant language.

INDIVIDUAL WITH A DISABILITY

- (A) in general the term `individual with a disability' means an individual with any disability (as defined in section 3 of the Americans with Disabilities Act of 1990 (42 U.S.C. 12102).
- (B) the term `individuals with disabilities' means more than 1 individual with a disability.

NONTRADITIONAL TRAINING AND EMPLOYMENT

The term `nontraditional training and employment' means occupations or fields of work, including careers in computer science, technology, and other emerging high skill occupations, for which individuals from one gender comprise less than 25 percent of the individuals employed in each such occupation or field of work.

TECH-PREP PROGRAM

The term `tech-prep program' means a program of study that--

- (A) combines at least 2 years of secondary education (as determined under State law) and 2 years of postsecondary education in a nonduplicative sequential course of study;
- (B) strengthens the applied academic component of vocational and technical education through the integration of academic, and vocational and technical, instruction;

(C) provides technical preparation in an area such as engineering technology, applied science, a mechanical, industrial, or practical art or trade, agriculture, a health occupation, business, or applied economics;

(D) builds student competence in mathematics, science, and communications (including through applied academics) in a coherent sequence of courses; and

(E) leads to an associate degree or a certificate in a specific career field, and to high skill, high wage employment, or further education.
