Abbreviations: ACE = Acetone; AOO = Acetone: olive oil (4:1); DMF = *N,N*-dimethyl formamide; DMSO = Dimethyl sulfoxide; LLNA: BrdU-ELISA = Murine local lymph node assay with enzyme-linked immunosorbent assay detection of bromodeoxyuridine; CASRN = Chemical Abstract Services Registry Number; Conc.= Concentration; GP = Guinea pig; LLNA = Murine local lymph node assay; NA = Not available; nonstd = non-standard; PC = Positive control (the numbers after PC represent the laboratory that performed the test and then the order of the test) ; Ref. = Reference; SI = Stimulation index; Trad. = Traditional; Veh. = Vehicle.

+ = Sensitizer; - = Non-sensitizer

¹ Applies to both traditional LLNA and LLNA: BrdU-ELISA unless otherwise noted.

²Number after Kojima et al. 2008 represents the laboratory that submitted the test.

³Numbers in parentheses indicate the maximum SI and the highest concentration tested.

⁴Information in parentheses provides the evidence for the human result; usually as incidence of a positive human response at the challenge concentration.

⁵Reference in parentheses applies to the maximum SI and the highest concentration tested, if it is different from the reference for the traditional LLNA result.

⁶Reference in parentheses applies to the evidence for the human result if different from the sensitizer/nonsensitizer outcome.

⁷Maximum SI occurred at 50%.

⁸Maximum SI occurred at 10%.

⁹Vehicle for the traditional LLNA was acetone.

¹⁰Maximum SI occurred at 25%. Vehicle for the traditional LLNA was *N,N*-dimethyl formamide.

¹¹Maximum SI occurred at 12.5%.

¹²Vehicle for the traditional LLNA was distilled water.

¹³Maximum SI occurred at 2% and 10%.

Abbreviations: BrdU-ELISA LLNA = Murine local lymph node assay with enzyme-linked immunosorbent assay detection of bromodeoxyuridine; BrdU = Bromodeoxyuridine CASRN = Chemical Abstract Services Registry Number; CI= Confidence interval (mean absorbance of any treatment group is greater than 95% confidence interval of vehicle control group mean); Conc. = Concentration; LLNA = Murine local lymph node assay; NA = Not available; PC = Positive control (numbers after PC designates laboratory and test number); Ref. = Reference; SD = Standard deviation (mean absorbance of any treatment group is greater than 2 or 3 SD for vehicle control group); SI = Stimulation index; Stats. = Statistics (analysis of variance for multiple dose groups or t-test to compare one treatment group to the vehicle control group); Trad. = Traditional.

+ = Sensitizer; - = Non-sensitizer

¹ Number after Kojima et al. 2008 represents the laboratory that submitted the test.
